Dear readers,

you are obtaining the fourteenth volume of the Statistical Yearbook of the Slovak Republic, which is the most important comprehensive publication of the Statistical Office of the Slovak Republic.

In addition to the regularly published data, the yearbook brings some new information again this year. The innovation reflects changes in the economic, social, demographical and ecological spheres, but also a transformation of the statistical activity.

The Statistical Yearbook 2004 brings results of the Microcensus, which provides a detailed structured information about the households' money income in 2002. Basic data of a new survey about information technology and innovation are published in this volume for the first time. The part devoted to the Energy is essentially revised namely due to the changes in reporting of this sector. The health part is extended by the power indices, namely in sleeping healthy facilities. The financial section includes the functional segmentation of local budgets' expenditures, as a consequence of the transfer of some competences to regional self-government. The publication was enriched also by results of the presidential election of the Slovak Republic, and the elections of deputies to the European Parliament. In international surveys you will find several new views on the comparison of countries of the European Union.

The Statistical Yearbook of the Slovak Republic was edited by the staff of the Statistical Office and in cooperation with the ministries and other institutions, which contributed with their data sources. I would like to thank them all for their performance.

A word of thanks belongs also to the publishing house VEDA, which has been publishing and distributing the Statistical Yearbook of the Slovak Republic from the very beginning.

Statistical Yearbook of the Slovak Republic 2004 can be ordered at: VEDA – publishing house of SAV, P.O.Box 2, 845 02 Bratislava 45 (tel: ++4212/54774255, fax: ++4212/54772682), or

can be purchased directly in the shop of VEDA – publishing house of SAV, Bratislava, Štefánikova 3. Attached CD-ROM is a part of the printed publication.

Dear users, if you would like to help us to improve the quality of the statistical yearbook, we will gladly receive your comments and suggestions at the adress: Statistical Office of the Slovak Republic, Miletičova 3, 824 67 Bratislava 26.

Peter Mach
President Statistical Office
of the Slovak Republic

Bratislava October 2004

The publication was elaborated by a team of authors included among the staff of the Statistical Office of the Slovak Republic under leadership of the Editorial Board:

Mach Peter, chairman of the Editorial Board
Baláž Pavol
Blahová Eva
Holičková Edita
Králiková Agnesa
Lieskovský Ivan
Olexa Milan
Palková Viera
Pflügler Alexander
Schill Štefan
Schwartzová Mária
Šipková Magdaléna
Škultéty Ivan

Notice

Unless otherwise specified in the text heading or a legend to the table, region the data refer to (country, district etc.) is the territory of the Slovak Republic.

Unless otherwise specified in the table heading or a legend to the table, size of published data file, the data refer to the economy of the SR in total including imputation for the organizations up to 19 employees, tradesmen or population.

As far as data by certain classifications are concerned (e.g. Statistical Branch Classification of Economic Activities, Standard International Trade Classification etc.), the English text of indicators not always corresponds to a literal translation of the Slovak text but is given according to the diction of the foreign classifications or is given in the abbreviated form.

Names of countries are given in abbreviations, that are not always in compliance with official full names of the countries.

Differences in sums and ratios result from rounding data off. Unless stated otherwise explicitly, published data are definitive.

Explanations to symbols

Macron (–)	in the place of a number denotes that the phenomenon did not occur
Zero (0; 0,0; 0,00)	denotes the magnitude more than zero but less than the least unit expressible in the table
Dot (•)	in the place of a number denotes that the figure is not available or reliable
Cross (x)	means that the entry is not possible for logical reasons
Capital I (I)	means that it is not possible to publish the figure because of its individual character
Break symbol (~)	means that the comparability of data series is cut off due to methodology or another reason

I. Slovakia from 1960 – 2003

II.1 National accounts

II.2 Finance

II.3 Prices

II.1 National accounts

II.1–1. Gross domestic product
II.1–2. Selected macroeconomic indicators in 2002
II.1–3. Selected macroeconomic indicators in 2003
II.1–4. Selected macroeconomic indicators – deflators
II.1–5. Gross domestic product by economic activities in 2002 and 2003
II.1–6. Value added by size structure of enterprises
II.1–7. Gross output by size structure of enterprises
II.1–8. Generation and use of income in sector of households
II.1–9. Gross domestic product by output, income and expenditure approach
II.1–10. Balancing items of national accounts in the Slovak Republic
II.1–11. Distributive transactions for institutional sectors
II.1–12. Main components of non-financial assets for institutional sectors
II.1–13. Financial transactions
II.1–14. Gross output from supply and use tables by branches
II.1–15. Intermediate consumption from supply and use tables by branches
II.1–16. Gross value added by economic activities from supply and use tables
II.1–17. Final consumption from supply and use tables by commodities
II.1–18. Compensation of employees from supply and use tables by branches
II.1–19. Gross fixed capital formation by selected economic activities
II.1–20 Gross fixed capital formation from supply and use tables by commodities
II.1–21 Gross operating surplus from supply and use tables by branches

II.2 Finance

II.2–1. Revenues and expenditures of general government budgets
II.2–2. Structure of expenditures of general government budgets by functional classification
II.2–3. Structure of revenues and expenditures of the state budget by type
II.2–4. Revenues and expenditures of local budgets
II.2–5. Structure of revenues and expenditures of the state budget by type
II.2–6. Balance of revenues and expenditures of the state budget
II.2–7. General government debt as of Dec. 31
II.2–8. Revenues and expenditures of the health insurance companies
II.2–9. Insured under the health insurance companies as of Dec. 31
II.2–10. Revenues and expenditures of the Social Insurance Agency
II.2–11. Insured under the Social Insurance Agency as of Dec. 31
II.2–12. Revenues and expenditures of the National Labour Office
II.2–13. Payers to the National Labour Office as of Dec. 31
II.2–14. Selected indicators on non-financial corporations by size structure of enterprises

II.2–17. Assets and liabilities of commercial banks as of Dec. 31
II.2–18. Monetary survey in actual exchange rate
II.2–19. Balance of payments of the Slovak Republic

II.2–20. Detailed capital account of balance of payments of the Slovak Republic
II.2–21. Average interest rates of deposits and credits by sectors in 2003
II.2–22. Summary of credits and deposits as of Dec. 31
II.2–23. Summary of population deposits as of Dec. 31
II.2–24. Average foreign exchange rates (midpoint)
II.2–25. Banking sector
II.2–26. Capital market
II.2–27. Foreign direct investments into the Slovak Republic as of Dec. 31
II.2–28. Foreign direct investments into the Slovak Republic by country of investor and by selected economic activities as of Dec. 31
II.2–29. Direct investments of the Slovak Republic abroad by country as of Dec. 31
II.2–30. Direct investments of the Slovak Republic abroad by country and selected economic activities as of Dec. 31
II.2–31. Financial indicators on investment companies and funds
II.2–32. Assets and liabilities of investment companies and funds as of Dec. 31
II.2–33. Insurance companies in the insurance market
II.2–34. Premium fixed by the law
II.2–35. Settled claims
II.2–36. Revenues and expenditures of supplementary pension insurance companies
II.2–37. Number of contracts, insured and beneiciaries in supplementary insurance companies

II.3 Prices

II.3–1. Development of price indices (annual averages)
II.3–2. Industrial producers price indices in selected sections of Classification of Products by Activity
II.3–3. Industrial producers price indices by the Classification of Products by Activity
II.3–4. Price indices of construction works by the Classification of Products by Activity
II.3–5. Producer price indices of agricultural products
II.3–6. Average prices of agricultural products
II.3–7. Development of core and net inflation
II.3–8. Consumer price indices
II.3–9. Cost of living indices of employees
II.3–10. Cost of living indices of pensioners
II.3–11. Average consumer prices of selected products

III.1 Territory and Climate

III.2 Population

III.3 Labour Market

III.4 Fixed Assets

III.5 Science and Technology

III.6 Organizational Structure of the Economy

III.1 Territory and Climate

III.1–1. Area, borders and surface of the Slovak Republic in 2003
III.1–2. Location of the Slovak Republic's territory
III.1–3. Maximum distances on the area of the Slovak Republic
III.1–4. Meteorological data from selected monitoring stations
III.1–5. Hydrological data
III.1–6. Main rivers in the Slovak Republic, their basins and length of bordering water courses
III.1–7. Mountains

III.2 Population

III.2–1. Population
III.2–2. Population by basic age groups (as of Dec. 31)
III.2–3. Population by sex (as of Dec. 31)
III.2–4. Population by nationality
III.2–5. Population by marital status (as of Dec. 31)
III.2–6. Population by age (as of Dec. 31)
III.2–7. Population by age (as of July 1)
III.2–8. Natural movement of population
III.2–9. Marriages by age of engaged couples in 2003
III.2–10. Marriages by education of engaged couples in 2003
III.2–11. Divorces by education of couples in 2003
III.2–12. Live-births by age of mother
III.2–13. Marital live-births by birth order and non-marital live-births
III.2–14. Live-births by month of birth
III.2–15. Fertility of women by age
III.2–16. Deaths by month of death
III.2–17. Abortions by age of women
III.2–18. Deaths by age and sex
III.2–19. Deaths by age and sex per 100 000 inhabitants

III.2–20. Deceased men by causes of death
III.2–21. Deceased women by causes of death
III.2–22. Internal migration of population by types
III.2–23. International migration in 2003

III.3 Labour Market

III.3–1. Economic activity of the population (from labour force survey)
III.3–2. Employed by age and education (from labour force survey)
III.3–3. Employed by Classification of Occupation – ISCO-88 (COM) (from labour force survey)
III.3–4. Employed by economic activity – NACE (from labour force survey)
III.3–5. Employed by status in employment, working time and permanency of the job (from labour force survey)
III.3–6. Employees and tradesmen in the economy of the SR (average registered number)
III.3–7. Average gross nominal monthly wage of employees in the economy of the SR calculated per persons
III.3–8. Number of employees and average gross nominal monthly wage in the economy of the SR by size of enterprises
III.3–9. Average gross hourly wage of employees in the economy of the SR for the enterprises with 20 and more employees (calculated per persons)
III.3–10. Structure of average gross nominal monthly wage of employees in the economy of the SR for 2002 (from results of the structure of earnings survey)
III.3–11. Structure of monthly labour costs per employee in 2002 (from total labour costs survey)
III.3–12. Hourly labour costs in the SR (from total labour costs survey)
III.3–13. Unemployed registered in labour offices in the SR (as of Dec. 31)
III.3–14. Unemployed by labour force survey

III.4 Fixed Assets

III.4–1. Status and movement of fixed assets at purchasing value in 2002
III.4–2. Status of tangible fixed assets at purchasing value as of Dec. 31, 2002 in corporations with 20 and more employees by groups
III.4–3. Status of intangible fixed assets at purchasing value as of Dec. 31, 2002 in corporations with 20 and more employees by groups
III.4–4. Fixed assets excluded from gross fixed capital formation as of Dec. 31, 2002 in corporations with 20 and more employees
III.4–5. Status of fixed assets at purchasing value in 2002 in corporations with 20 and more employees by ownership
III.4–6. Fixed assets at purchasing value as of Dec. 31, 2002 in corporations with 20 and more employees by size structure of enterprises
III.4–7. Dwellings

III.5 Science and Technology

III.5–1. Research and development (R&D) personnel
III.5–2. Research and development personnel in FTE by sectors and field of science
III.5–3. Structure of activities of research and development institutions by current expenditures
III.5–4. Expenditures on research and development
III.5–5. Expenditures on research and development by socio-economic objectives
III.5–6. Expenditures on research and development by sectors and fields of sciences
III.5–7. Licences
III.5–8. Applications concerning industrial legal protection
III.5–9. Granted and registered kinds concerning industrial legal protection
III.5–10. Applications concerning inventions according to the international patent classification
III.5–11. Foreign applications concerning inventions and PCT according to the international patent classification
III.5–12. Granted patents according to the international patent classification
III.5–13. Applications concerning trademarks
III.5–14. Registered trademarks
III.5–15. Certified products and certified quality management systems in corporations with 20 and more employees – total
III.5–16. Certified products and certified quality management systems in corporations with 20 and more employees – new in current year
III.5–17. Innovation activity in industry and selected services

III.6 Organizational Structure of the Economy

III.6–1. Legal units by economic activities
III.6–2. Enterprises by economic activities
III.6–3. Natural persons-entrepreneurs by economic activities and selected legal forms as of Dec. 31, 2003
III.6–4. Enterprises by economic activities and selected ownership forms as of Dec. 31, 2003
III.6–5. Enterprises by economic activities and size categories by employees as of Dec. 31, 2003
III.6–6. Enterprises by selected ownership forms and size categories by employees as of Dec. 31, 2003
III.6–7. Enterprises births by years
III.6–8. Enterprises deaths by years
III.6–9. New natural persons-entrepreneurs creations by years
III.6–10 Cessations of natural persons-entrepreneurs by years

IV.1 State and Protection of the Environment

IV.2 Air Quality

IV.3 Water

IV.1 State and Protection of the Environment

IV.1–1. Protected territories
IV.1–2. National parks and protected landscape areas as of Dec. 31, 2003
IV.1–3. Penalties
IV.1–4. Environmental expenditures together
IV.1–5. Tree species area and their age structure as of Dec. 31, 2003
IV.1–6. Damage to forests caused by immisions as of Dec. 31, 2003
IV.1–7. Degree of damage to forests by tree species as of Dec. 31, 2003
IV.1–8. Damage to forests caused by abiotic and biotic factors as of Dec. 31, 2003
IV.1–9. Data on hunting grounds as of Dec. 31
IV.1–10. Hunting and spring stock of game
IV.1–11. Xenobiotics in foodstuffs
IV.1–12. Municipal waste generation: by subgroup of Waste Catalogue, 2003
IV.1–13. Waste as of Dec. 31, 2003 in selected section of economic activity

IV.2 Air Quality

IV.2–1. Emissions of major pollutants by economic activity – particulates
IV.2–2. Emissions and weighted emissions in district according to the highest amount of weighted emissions in 2002
IV.2–3. Immissions in selected localities in 2003 – annual average concentrations
IV.2–4. Numbers of exceedances of immission limit values in 2003
IV.2–5. Regional air pollution in 2003
IV.2–6. Levels of surface ozone in selected monitoring stations
IV.2–7. Regional pollution of precipitation in 2003

IV.3 Water

IV.3–1. Water courses and waterworks under the administration of water management organizations as of Dec. 31
IV.3–2. Public water-supply and sewage systems as of Dec. 31
IV.3–3. Waste water drained off into water courses in 2003
IV.3–4. Generation of waste water in 2003
IV.3–5. Water quality in water courses by river-basins in 2003
IV.3–6. Water quality in significant water courses in 2003 – quality categories
IV.3–7. Water quality in the mouths of significant water courses in 2003

V.1 Agriculture

V.2 Forestry

V.3 Industry

V.4 Energy

V.5 Construction

V.6 Transport, Posts and Telecommunications

V.7 Internal Trade, Hotels and Restaurants

V.8 Foreign Trade

V.9 Real estate, renting, business activities and other services

V.10 Tourism

V.1 Agriculture

V.1–1. Use of land
V.1–2. Gross agricultural production in enterprises with 20 and more employees
V.1–3. Sown areas as of May 20
V.1–4. Production of agricultural crops
V.1–5. Hectare yields
V.1–6. Selected sorts of vegetables
V.1–7. Selected sorts of fruit
V.1–8. Roofed areas
V.1–9. Age and sort composition of vineyards as of Dec. 31
V.1–10. Balance of cereals
V.1–11. Livestock as of Dec. 31
V.1–12. Livestock production
V.1–13. Livestock yields
V.1–14. Catches in inland waters
V.1–15. Apiculture
V.1–16. Sales of agricultural products by primary producers
V.1–17. Level of agricultural production
V.1–18. Means of mechanization as of Dec. 31
V.1–19. Consumption of fertilizers

V.1–20. Consumption of plant protection agents
V.1–21. Employees and wages by main professions in agriculture (in enterprises with 20 and more employees)
V.1–22. Economic accounts for agriculture: production account

V.2 Forestry

V.2–1. Forest land
V.2–2. Afforestation and silviculture
V.2–3. Logging and timber deliveries
V.2–4. Number and size of enterprises managing forest in 2003

V.3 Industry

V.3–1. Basic indicators of industry
V.3–2. Selected indicators in industry by size structure of enterprises
V.3–3. Industrial production index (not adjusted from influence of working days number) by economic activity
V.3–4. Industrial production index (PY = 100) (not adjusted from influence of working days number) by economic activity
V.3–5. Industrial production index (not adjusted from influence of working days number) by Main Industrial Groupings
V.3–6. Industrial production index (PY = 100) (not adjusted from influence of working days number) by Main Industrial Groupings
V.3–7. Receipts from sales for export of enterprises with 20 and more employees by economic activity
V.3–8. Turnover of enterprises with 20 and more employees by economic activity
V.3–9. Number of enterprises with 20 and more employees by economic activity
V.3–10. Monthly labour productivity based on turnover in enterprises with 20 and more employees by economic activity
V.3–11 Average registered number of employees of enterprises with 20 and more employees by economic activity

V.3–12 Average monthly wage of employee in enterprises with 20 and more employees by economic activity
V.3–13. Turnover of enterprises with 20 and more employees by Main Industrial Groupings
V.3–14. Selected indicators in industry by sector of ownership
V.3–15. Production of selected industrial commodities

V.4 Energy

V.4–1. Balance of fuels, electricity and heat
V.4–2. Balance of solid fuels
V.4–3. Balance of gaseous fuels
V.4–4. Balance of crude oil and petroleum products
V.4–5. Balance of renewables and wastes
V.4–6. Balance of electricity
V.4–7. Balance of heat
V.4–8. Consumption of selected fuels in agriculture in enterprises with 20 and more employees
V.4–9. Consumption of selected fuels and electricity in industry in enterprises with 20 and more employees
V.4–10. Consumption of selected fuels and electricity in construction in enterprises with 20 and more employees

V.5 Construction

V.5–1. Construction production and receipts – aggregate data
V.5–2. Construction production carried out by own employees and average registered number of employees by ownership sector
V.5–3. Construction production carried out by own employees and labour productivity by size structure of enterprises
V.5–4. Average registered number of employees and average monthly wage by size structure of enterprises
V.5–5. Basic indicators in construction enterprises with 20 and more employees
V.5–6. Contractually agreed construction production in new construction, reconstructions and modernisations in inland by Classification of Types of Construction in enterprises with 20 and more employees
V.5–7. Construction production carried out by own employees by Classification of roduction (CPA) in enterprises with 20 and more employees
V.5–8. Completed dwellings in new buildings for habitation built by supplier enterprises with 20 and more employees by construction technology
V.5–9. Consumption of selected products in construction enterprises with 20 and more employees

V.6 Transport, Posts and Telecommunications

V.6–1. Selected indicators on transport, posts and telecommunications
V.6–2. Basic data on transport network as of Dec. 31
V.6–3. Motor vehicles as of Dec. 31
V.6–4. Average registered number of employees for incorporated enterprises with 20 and more employees.
V.6–5. Railway transport
V.6–6. Railway transport of goods by commodity groups
V.6–7. Road transport
V.6–8. Selected indicators in road public transport by size structure of enterprises
V.6–9. Road public transport of goods by commodity groups
V.6–10 Water transport
V.6–11. Shipping by commodity groups for enterprises with 20 and more employees
V.6–12. City transport
V.6–13. Air transport
V.6–14. Pipeline transport
V.6–15. Post offices
V.6–16. Telecommunications as of Dec. 31
V.6–17. Information and communication technology in enterprises with 20 and more employees
V.6–18. Information and communication technology in households

V.7 Internal Trade, Hotels and Restaurants

V.7–1. Selected indicators on internal trade
V.7–2. Structure of turnover for retail trade
V.7–3. Turnover on sale, maintenance and repair of motor vehicles and motorcycles by economic activities
V.7–4. Tunover in wholesale by economic activities
V.7–5. Turnover in retail trade by economic activities
V.7–6. Average number of employees on sale, maintenance and repair of motor vehicles and motorcycles by economic activities
V.7–7. Average number of employees in wholesale by economic activities
V.7–8. Average number of employees in retail trade by economic activities
V.7–9. Average monthly wage on sale, maintenance and repair of motor vehicles and motorcycles by economic activities
V.7–10. Average monthly wage in wholesale by economic activities
V.7–11. Average monthly wage in retail trade by economic activities
V.7–12. Selected indicators in internal trade by size structure of enterprises
V.7–13. Retail network in organizations with 20 and more employees as of December 31, 2003
V.7–14. Turnover in hotels and restaurants by economic activities
V.7–15. Average number of employees in hotels and restaurants by economic activities
V.7–16. Average monthly wage in hotels and restaurants by economic activities
V.7–17. Network of outlet centres of catering with 20 and more employees as of December 31, 2003

V.8 Foreign Trade

V.8–1. Territorial structure of foreign trade
V.8–2. Foreign trade by commodity groups (Standard International Trade Classification Revision 3)
V.8–3. Imports, exports and trade balance by selected countries
V.8–4. Foreign trade by chapters of classification of goods in Customs Tariff
V.8–5. Imports of selected commodities by the most important partners
V.8–6. Exports of selected commodities by the most important partners

V.9 Real estate, renting, business activities and other services

V.9–1. Basic indicators for real estate, renting, business activities and other services
V.9–2. Selected indicators for real estate, renting, business activities and other services by size structure of enterprises
V.9–3. Turnover for real estate, renting, business activities and other services

V.10 Tourism

V.10–1. Capacity and performances of accommodation facilities
V.10–2. Capacity and performances of accommodation facilities in selected towns in 2003
V.10–3. Foreign visitors in accommodation facilities of tourism
V.10–4. Active tourism organized by travel agencies in the SR
V.10–5. Passive tourism organized by travel agencies in the SR
V.10–6. Foreign tourism by sections of borders
V.10–7. Number of entries of foreign visitors by the visa requirement

VI.1 Income, Expenditure and Consumption of Households

VI.2 Education

VI.3 Health

VI.4 Social Security

VI.5 Culture and Religion

VI.6 Physical Culture

VI.1 Income, Expenditure and Consumption of Households

VI.1–1. Gross money income of private households by type of income (household budget surveys)
VI.1–2. Gross money income and expenditure of private households by social groups (household budget surveys)
VI.1–3. Structure of net money income and expenditure of private households by social groups (household budget surveys)
VI.1–4. Households by social group of a head of household in 2002 (microcensus)
VI.1–5. Households by social activity of a head of household in 2002 (microcensus)
VI.1–6. Households by education of a head of household in 2002 (microcensus)
VI.1–7. Households by type in 2002 (microcensus)
VI.1–8. Households by number of dependent children in 2002
VI.1–9. Pensioners by sex, age, kind of pension and level of annual pension in 2002 (microcensus)
VI.1–10. Consumption of selected kinds of food and alcoholic beverages (per capita/year)
VI.1–11. Daily consumption of energy and the most important nutritive substances per capita

VI.2 Education

VI.2–1. Kindergartens and basic schools
VI.2–2. Grammar schools (secondary general education)
VI.2–3. Specialized secondary schools
VI.2–4. Specialized secondary schools by type of schools (separate part-time schools included)
VI.2–5. Specialized secondary schools – students and school-leavers by fields of study (full time study)
VI.2–6. Vocational secondary schools
VI.2–7. Special schools
VI.2–8. Higher education institutions
VI.2–9. Higher education institutions by fields of study – students of Slovak nationality
VI.2–10. Higher education institutions by subjects of studies
VI.2–11. Higher education institutions – foreign students by nationality
VI.2–12. Higher education institutions in school year 2003/2004
VI.2–13. Schools by type and teaching language
VI.2–14. Basic schools of arts
VI.2–15. Providing meals at schools
VI.2–16. Scholarships
VI.2–17. After school facilities

VI.2–18. Church schools
VI.2–19. Private schools
VI.2–20. Income in private and church schools
VI.2–21. Expenditures in private and church schools

VI.3 Health

VI.3–1. Physicians posts, beds in health facilities, pharmacies as of Dec. 31
VI.3–2. Natural curative spa
VI.3–3. Employees working in health services as of Dec. 31
VI.3–4. Physicians and pharmacists as of Dec. 31
VI.3–5. Bed fund in the wards of institutional health care estabishments as of Dec. 31
VI.3–6. Hospitalised patients in the wards of institutional health care estabishments
VI.3–7. Average length of stay in the wards of institutional health care estabishments
VI.3–8. Bed occupancy of stay in the wards of institutional health care estabishments
VI.3–9. Cases of treatments (examination) in out-patient facilities of curative and preventive care (without visiting service)
VI.3–10. Selected infectious diseases compulsory notified
VI.3–11. Terminated cases of disability to work
VI.3–12. Disability to work due to disease and injury
VI.3–13. Calendar days of disability to work by NACE
VI.3–14. Expenditures in public health sphere
VI.3–15. Consumption of drugs
VI.3–16. Consumption of drugs by categories
VI.3–17. Consumption of drugs by selected producer countries
VI.3–18. Consumption of drugs by selected producers
VI.3–19. Income in state subsidized health facilities
VI.3–20. Expenditures in state subsidized health facilities

VI.4 Social Security

VI.4–1. Persons under sickness insurance
VI.4–2. Systematic sickness insurance benefits
VI.4–3. Systematic sickness insurance benefits by kind
VI.4–4. State social benefits and sickness insurance and pensions security benefits refunded by government by kind
VI.4–5. Pension security benefits
VI.4–6. Number of pensions paid out, average pensions and pension security benefits paid out
VI.4–7. Average monthly level of pensions paid
VI.4–8. Number of pension receivers
VI.4–9. Non-investment expenditures on social assistance
VI.4–10. Nursing service
VI.4–11. Social service facilities as of Dec. 31
VI.4–12. Social service facilities as of Dec. 31 by kind
VI.4–13. Refugees in the Slovak Republic

VI.5 Culture and Religion

VI.5–1. Theatres
VI.5–2. Musical ensembles
VI.5–3. Audio-visual works
VI.5–4. Radio broadcasting
VI.5–5. Television broadcasting
VI.5–6. Public libraries, scientific libraries, university libraries
VI.5–7. Periodical press
VI.5–8. Journals by periodicity of issue
VI.5–9. Newspapers by periodicity of issue
VI.5–10. Activities of individual cultural facilities (museums, galleries, observatories, Zoo's)
VI.5–11. Population by religions by the housing and population census
VI.5–12. Selected indicators on churches
VI.5–13. Selected indicators on Roman-Catholic Church
VI.5–14. Membership in civil associations, chambers and trade unions

VI.6 Physical Culture

VI.6–1. Selected indicators on physical culture
VI.6–2. Sports schools
VI.6–3. Sports classes
VI.6–4. Unions and mebership of the Association of Technical and Sporting Activities of the SR
VI.6–5. Metals won by the Slovak sportsmen (adults)
VI.6–6. Metals won by the Slovak sportsmen (juniors)

VII.1 Crime-rate and Justice

VII.2 Accidents and Fires

VII.1 Crime-rate and Justice

VII.1–1. Crime-rate
VII.1–2. Development of criminal offences by basic groups and kinds
VII.1–3. Cases settled by courts
VII.1–4. Results of criminal proceedings and legally passed sentences
VII.1–5. Persons convicted of selected crimes
VII.1–6. Juveniles convicted of selected crimes
VII.1–7. Civil cases
VII.1–8. Sued and convicted persons in penitentiary institutions
VII.1–9. Convicts in penitentiary institutions by reformatory and reclamation groups (as of Dec. 31)
VII.1–10. Convicts in penitentiary institutions by reformatory and reclamation groups, education and sex (as of Dec. 31)
VII.1–11. Convicts in penitentiary institutions by duration of custodial sentence and reformatory and reclamation groups (as of Dec. 31)
VII.1–12. Convicts in penitentiary institutions by age and sex

VII.2 Accidents and Fires

VII.2–1. Road traffic accidents
VII.2–2. Road traffic accidents by cause
VII.2–3. Road traffic accidents by main causes
VII.2–4. Road traffic accidents by place of origin
VII.2–5. Fires
VII.2–6. Fires by branches of the economy
VII.2–7. Killed and injured persons in fires by observed categories

VIII.1 Regions, Areas

VIII.2 Towns

VIII.1 Regions, Areas

VIII.1–1. Gross domestic product
VIII.1–2. Gross value added by branches in 2001
VIII.1–3. Gross domestic product in purchasing power standard
VIII.1–4. Surface area, population and population density in 2003
VIII.1–5 Population as of Dec. 31
VIII.1–6. Natural movement of population
VIII.1–7. Natural increase, decrease (–) of population
VIII.1–8. Internal migration of the population
VIII.1–9. Marriages and divorces
VIII.1–10. Employment by selected branches as of Dec. 31, 2003
VIII.1–11. Registered unemployment and registered unemployment rate as of Dec. 31, 2003
VIII.1–12. Emissions of basic pollutants
VIII.1–13. Specific emissions of basic polutants
VIII.1–14. Public water-supply and sewage systems
VIII.1–15. Production of agriculture crops
VIII.1–16. Hectare yields of agricultural crops
VIII.1–17. Livestock as of Dec. 31
VIII.1–18. Receipts from sale of farming products of primary production
VIII.1–19. Gross agricultural production from gross turnover
VIII.1–20. Regional accounts for agriculture

VIII.1–21. Turnover and number of employees in industry
VIII.1–22. Construction production and number of employees in construction branch
VIII.1–23. Road transport
VIII.1–24. Turnover in retail trade
VIII.1–25. Turnover in wholesale
VIII.1–26. Construction of dwellings in 2003
VIII.1–27. Completed dwellings by number of rooms in 2003
VIII.1–28. Kindergartens and basic schools
VIII.1–29. Grammar schools and specialized secondary schools
VIII.1–30. Beds and physicians posts in health facilities
VIII.1–31. Beds and physicians posts in hospitals
VIII.1–32. Beds and physicians posts in natural curative spa
VIII.1–33. Entrepreneurial entities – natural persons as of Dec. 31, 2003
VIII.1–34. Enterprises by selected legal forms as of Dec. 31, 2003
VIII.1–35. Criminality by major groups in 2003
VIII.1–36. Violent criminal offences in 2003
VIII.1–37. Road accidents in 2003
VIII.1–38. Fires in 2003

VIII.2 Towns

VIII.2–1. Natural movement of population
VIII.2–2. Population, total increase, decrease (–) of population
VIII.2–3. Geographical data
VIII.2–4. House and dwelling stock
VIII.2–5. Retail and accommodation facilities network as of Dec. 31, 2003
VIII.2–6. Water-supply and gas-supply network and sewage system as of Dec. 31, 2003
VIII.2–7. Education in 2003
VIII.2–8. Culture as of Dec. 31, 2003

IX.1 International Surveys

IX.1 International Surveys

IX.1–1. Surface area, population and population density
IX.1–2. Marriages
IX.1–3. Divorces
IX.1–4. Natality
IX.1–5. Mortality
IX.1–6. Natural increase (decrease) in population
IX.1–7. Infant mortality
IX.1–8. Life expectancy
IX.1–9. Urban population
IX.1–10. Youth education attainment level
IX.1–11. Economically active population in 2002
IX.1–12. Total employment growth
IX.1–13. Unemployment rate
IX.1–14. Employment rate
IX.1–15. Long-term unemployment rate
IX.1–16. Gross domestic product
IX.1–17. Gross domestic product per capita in purchasing power standards (PPS) (EU-15 = 100)
IX.1–18. Labour productivity per person employed (EU-15 = 100)
IX.1–19. Gross domestic expenditure on research and development
IX.1–20. Greenhouse gases emissions

IX.1–21. Industrial production index
IX.1–22. Consumption of petroleum
IX.1–23. Consumption of natural gas
IX.1–24. Energy intensity of the economy
IX.1–25. Agricultural production (average from 1989 – 1991 = 100)
IX.1–26. Cereals
IX.1–27. Potatoes
IX.1–28. Pulses
IX.1–29. Production of vegetables and fruit
IX.1–30. Cattle as of Dec. 31
IX.1–31. Pigs as of Dec. 31
IX.1–32. Meat production
IX.1–33. Structure of meat production by kind in 2002
IX.1–34. Production of milk
IX.1–35. Volume of freight transport relative to GDP
IX.1–36. General consumer price indices
IX.1–37. Consumer price indices of foodstuffs
IX.1–38. Comparative price levels
IX.1–39. Imports, exports and balance by main countries
IX.1–40. Balance of payment (current account)
IX.1–41. International reserves (minus gold)
IX.1–42. CEFTA countries

Methodological notes

In the chapter "Slovakia from 1960 – 2003" is published historic time data series of selected aggregates of national accounts since 1993 at current and constant prices (1995 = 100) according to the methodology ESA 95 (European System of National and Regional Accounts in the Community 1995). Data for years 1993 – 2001 are revized from point of the implementation ESA 95 on the basis of annual account 2000. Data for 2002 and 2003, year 2003 by the Quarterly National Accounts. Data are comparable in full time series.

The Quarterly National Accounts are compiled on the basis of the ESA 95 methodology and are after the revision which has been made based on the results of the National Accounts for 1999. Selected indicators of Quarterly National Accounts are expressed at current and constant prices. GDP as balance aggregate item is recalculated into constant prices on the side of formation as the sum of value added of branches (reached by twice deflation as difference of production and intermediate consumption at constant prices) minus FISIM at constant prices plus taxes reduced by subsidies on products at constant prices. On the uses side GDP at constant prices is balance item between final use (domestic and foreign demand) and imports, which are recalculated into constant prices. Than GDP price deflator expresses share between calculated GDP at current and constant prices.

Rate of exchange USD and EUR used for GDP recalculation is average annual exchange rate given by the National Bank of Slovakia.

Annual National Accounts represent a compatible accounting framework for the systematic and detailed description of the total economy as well as particular sectors and subsectors where all stages of the economic process are recorded (output, generation and distribution of income, use of income, accumulation). In line with the methodology, each account has the resource side and the use side and the balancing item of each account has its own economic contents. Transactions represent economic operations and the related flows carried out between economic units. According to their nature, they can be broken down into four main groups:

– transactions in goods and services (code P) which are related to production (national output

or imports), exchange and use of goods and services (intermediate consumption, final consumption, capital formation or exports),
- distributive transactions (code D) by means of which the value added generated by residents is being distributed and the income or wealth is redistributed,
- financial transactions (code F) (transactions in financial means) are related to changes in financial assets and liabilities in particular sectors,
- other flows in accumulation accounts (code K), for instance, consumption of fixed capital (K.1), acquisition less disposal of non-financial non-produced assets (K.2).

The code B is assigned to balancing items, which express the difference between the resources and use in the current accounts and the difference between assets and liabilities in the capital and financial accounts.

Balance items in the tables are given in gross term, i. e. including fixed capital consumption or in net term, i. e. without fixed capital consumption. The code for balance item in gross term is created by the code of item and by the letter "g". Also the letter "n" is linked to the code relating the net balance item. Item code with sign "*" creates balance item for economy in total.

The balancing item of Production Account is **gross domestic product at market prices (B.1*g)** for economy in total which is the final result of activities of resident producers. In the sector classification the balance item is **gross value added B.1 g**. After subtracting of fixed capital consumption both items are created in net term.

Net operating surplus (B.2n) is balancing item of the Generation of Income Account, which include distributive transaction linked to production. Net operating surplus corresponds to the net domestic product at market prices less the rewards of employees and net taxes on production and imports. In the sector of households it also represents the **net mixed income (B.3n)**. It includes profit and compensation for work of entrepreneurs not registered in the Business Register. Distinction of the two items can be done by gross estimate and therefore it is not applied.

The balancing item of the Allocation of Primary Income Account is **net national income (B.5*n)**. According to the sector classification the balancing item is **net balance of primary income (B.5n)**. The balancing item of Secondary Distribution of Income Account is **net disposable income (B.6n)** which expresses the income of the country (or the given sector) usable for the final consumption and saving.

The Redistribution of Income in Kind records flows related to the use of particular goods and

services which these households obtain free of charge. The balancing item is **net adjusted disposable income (B.7n)**.

Net saving (B.8n) are the balancing item of the Use of Income Account.

The balancing item of the Capital Account, which records the acquisition less disposal of non-financial assets of resident units and measures the changes in the net worth due to saving (the last balance item of current accounts) and capital transfers, are **net lending (+) or net borrowing (–) (B.9)** for total economy which are the sum of net lending and net borrowing of institutional sectors. They represent net resources which the total economy lends abroad (if they are plus) or borrows from abroad (if minus). The net lending (+) or borrowing (–) for total economy are equal, however with the opposite sign, to the net borrowing (–) or lending (+) from abroad. Net lending (+) or borrowing (–) should correspond to B.9 item's value in the Financial Account. The differences between items are caused by using of different data sources in non-financial and financial accounts and timing difference.

Changes in the net worth due to saving and capital transfers (B.10.1) are not balancing item in the system structure. But it is important part of changes of net worth, therefore it is coded together with others balancing items.

External Account of Goods and Services records imports of goods and services on resources side of the account and exports of goods and services on the uses side. The difference between resources and uses is balancing item called **external balance of goods and services (B.11).**

External Account of Primary Incomes and Current Transfers is determined by **current external balance (B.12)**, which in the structure of the system corresponds to saving by the institutional sectors.

The Supply and Use Tables provide a background for a detailed analysis of the process of generation of resources of goods and services, their use and generation of income linked to the production process. Methodological basis for the compilation of commodity by industry tables is the ESA 95 methodology. In tables, there are indicators aggregated into categories broken down by commodities and main activity. The gross output and value added are expressed at basic prices while the intermediate consumption at purchaser's prices. Data on gross output are based on the Supply table and intermediate consumption indicator results from the 1. quadrant of the Use table. Other indicators (final consumption, formation of gross fixed capital are given at purchaser's prices) are the part of the 2. quadrant of the Use table.

Time series of indicators for years 1993 – 2000 is compiled at current and constant prices (1995 = 100).

The generation and use of income in the sector of households are calculated at current prices by ESA 95 methodology on the level of annual account 2000. The table contains basic items of the receipts and expenditures of the sector of households, which includes individual citizens as final consumers (a consumer household) and natural persons – entrepreneurs which carry out their business activities according to the Tradesmen Act or other legislative rules and are not registered in the Business Register.

Definitions

Production represents the value of goods and services, which are the result of the activity of resident units during the accounting period in the territory of the Slovak Republic. Production according to the ESA 95 is broken down into market production, own account production and other non-market production.

Intermediate consumption consists from services and goods of a short-term use which have been consumed or transformed by the production process within the accounting period.

Value added is a balancing item and is calculated by a subtraction of intermediate consumption from production of individual sectors or branches.

Domestic product at market prices expresses the final result of the production activity of resident producers for economy in total. It corresponds to the total production (at basic prices, i.e. it includes other net taxes on production) of resident producers after subtracting their intermediate consumption and adding the net taxes on products.

Within the **final consumption**, two types of consumption are distinguished: **expenditures on final consumption,** which include expenditures on the consumption of goods and services and may occur in the sector of government, households and non-profit institutions serving households and **actual final consumption** related to the acquisition of consumer goods and services, which can be of a nature of the collective or individual consumption.

Gross fixed capital formation for total economy consists from expenditures on new fixed assets or from other specific expenditures, which the producers spend on goods and services in order to retain, increase or expand their production capacity or to create new production possibilities in the future. In the framework of sector classification except costs on purchase of

new fixed assets (without lands, valuables, and valuable rights) there are included costs on purchase of used fixed assets. Formation value is reduced by sale of fixed assets, transfer by barter exchange or natural capital transfer.

Change in inventories is defined as a difference between the acquisition and disposal of inventories of the particular time period. Inventories include the stored material, work in progress, semi-finished goods of the own-production, goods, animals and stored goods.

Valuables are non-financial assets bought or held by people for purpose of saving value.

Consumption of fixed capital represents the amount of fixed assets consumed for surveyed period in consequence of normal depreciation and foreseeable obsolescence.

Exports and imports of goods and services include exports and imports of goods surveyed in the framework of the trade balance and exports and imports of services surveyed in the framework of the balance of services. Exports and imports of services include all services related to the foreign activity (services of freight, passenger and other transport, insurance and other services).

Compensation of employees covers total compensation in a monetary form (or in kind) which is paid by an employer to the employee as a compensation for work being done by the employee during the given accounting period. Compensation of employees is broken down into wages and salaries and social contributions of employers. Social contributions of employers are further broken down into actual social contributions of employers and imputed social contributions of employers.

Taxes on production and imports are compulsory unrequited payments, in cash or in kind, which are levied by general government. They are divided into taxes on products and other taxes on production.

Subsidies are current unrequited payments, which general government make to resident producers. They include subsidies on products and other subsidies on production.

Property income results from the ownership of financial assets, i. e. deposits, bonds or tangible non-produced assets (land and sub-soil assets) which the owner obtains as a compensation for providing them to or making them available for another institutional unit. Property income includes interest, distributed income of corporations (dividends, withdrawals from the income of quasi-corporations), re-invested profit from foreign direct investment, property income attributed to insurance policy holders and rent.

Current taxes on income and wealth, etc. are of the same nature as tax on income (of

households, from the profit of corporations, of non-profit institutions), as well as the tax on wealth which are being paid regularly each tax period (on the contrary to the taxes on capital which are being levied irregularly). The transfers are in question because the government does not provide any counter-value to the individual unit paying taxes. Current taxes on income and wealth do not include inheritance taxes, death duties or taxes on gifts, occasional or exceptional levies on capital or wealth, taxes on land, buildings or other assets (owned or rented) which are used for production.

Social contributions and benefits are broken down into social contributions (actual and imputed), social benefits other than social transfers and social transfers in kind which the government units and non-profit institutions serving households provide to individual households.

Other current transfers cover non-life insurance premiums and claims, transfers within general government, current international co-operation and miscellaneous current transfers which represent transfers to non-profit institutions, transfers between households, fines and penalties, lottery, winnings and bets, etc.

Adjustment for the change in net equity of households in pension funds reserves is a item harmonizing households savings and a change in net equity of households in pension funds reserves in the financial account.

Financial transactions are transactions in financial assets and liabilities between institutional units and between them and the rest of the world by mutual agreement involving simultaneous creation or liquidation of a financial asset and the counterpart liability or a change of ownership of a financial asset or assumption of a liability.

Monetary gold and special drawing rights. Monetary gold includes gold held by monetary authorities or other institutions under supervision of monetary authorities as foreign exchange reserve. Special drawing rights include all transactions with international reserve assets created by the International Monetary Fund.

Currency and deposits. There are included currency (notes and coins in circulation), transferable deposits, which are immediately convertible into currency or which are transferable by cheques, banker's order, debit entry or the like both without any kind of significant restriction or penalty. There are included other deposits not negotiable, in national or in foreign currency (e. g. time deposits, savings certificates, savings books, etc.).

Securities other than shares. They cover debt securities as bills, bonds, certificates of

deposit, commercial paper, debentures, financial derivates and similar instruments normally traded in the financial market.

Loans are unconditional debts to the creditor which have to be repaid at maturity and which are interest-bearing. There are included bank credits, financial assets or liabilities of all sectors and the rest of the world.

Shares and other equity. These financial assets generally entitle the holder to a share in the profits of the corporation or quasi-corporation and to share in their net assets in the event of liquidation. There are divided on shares and other equity excluding mutual funds shares, which represent property rights on corporations or quasi-corporations and generally entitle the holders to a share in the profits and to share in their net assets in the event of liquidation. Mutual funds shares include shares issued by funds regardless they are open-end, semi-open, closed-end funds. They may be quoted or unquoted.

Insurance technical reserves cover net equity of households in life insurance and pension funds reserves, prepayments of insurance premium, reserves for outstanding claims. In the Financial Account the prepayments of insurance premium recorded between policy holders and insurance corporations consist of those parts of the premiums that are payable in the current accounting period and that are intended to cover risks outstanding within the following period.

Other accounts receivable include trade credits and advances, which create financial claims relating to the delivery of goods and services, where payment has not taken place. Other accounts receivable/payable arise from timing difference between distributive transactions or financial transactions on the secondary market and the corresponding payment.

Source

The compilation of the National Accounts is based on the following data sources:

- annual and quarterly state statistical surveys,
- banking information, e.g. monetary overview, balance of payments, banking statistics data,
- accounting statements and administrative data sources of the Ministry of Finance of the SR and other next ministries and central bodies,
- expert estimates of data based on the methodological recommendations of experts from Eurostat.

Detailed information is presented in the publications of the Statistical Office of the SR, in the quarterly publication Macro-economic Indicators of the Quarterly National Accounts and Value Added and in annual publications National Accounts of the SR; Supply and Use Tables by Commodities and Industries in the SR.

[1)] Methodology ESA 95

Methodological notes

General government budgets consist of central government budget which is managed by government of the Slovak Republic, local budgets managed by local authorities (municipalities and higher territorial units), budgets of social security funds and budgets of state special funds including budgets of the Slovak Land Fund and the National Property Fund, budgets of the Slovak Consolidation, j. s. c., Creditors, j. s. c. and public universities. Revenues of all general government budgets are without received credits, balances of resources from last year and from transfers from monetary funds, but includes received loans repayments and revenues from sale of share. Expenditures of all general government budgets are without principals repayments, but includes granted loans and share purches. Data on revenues and expenditures of general government budgets in total are consolidated, whereas data shown for individual items of general government budgets are not.

The positive balance of general government budget revenues and expenditures in 2002 was due to a transformation of the National Property Fund‘s assets into public funds in order to get cash for the state pension system‘s reform, which will be used in the future, and to acquit a part of Slovakia‘s debt.

Revenues of local budgets (municipalities and higher territorial units) are without received credits, resources balance from the last year and without transmissions from financial funds. Expenditures are without principals repayments.

Revenues of state budget are without received credits. Expenditures are without principals repayments of received credits. In the table on structure of revenues and expenditures of the state budget by type is presented classification of current expenditures on public consumption of the population and the government by budgetary chapters. There is only finance granted by the way of state budget chapters of the Ministry of Education of the SR, the Ministry of Labour, Social Affairs, and Family of the SR and the Ministry of Health of the SR.

In the Slovak Republic the area of **compulsory social security** is performed by the following institutions: Social Insurance Agency, health insurance companies and National Labour Office.

Data on revenues, expenditures, insured persons or payers to the health insurance companies, to the Social Insurance Agency and to the National Labour Office are obtained from annual statistical surveys. Reporting units are presented by the headquarters of organizations of compulsory social security.

Non-financial corporations are incorporated entrepreneurial subjects running business to make profit in all branches of activity except banking and insurance. Subsidized organizations covering their expenditures by more than 50 % of revenues are also included. Those enterprises which are not corporations (households, tradesmen, freelancers and farmers) are excluded.

Basic interest rate corresponds with discount published till December 31, 2002.

Banking includes selected indicators on activity of the National Bank of Slovakia, commercial banks, administration companies and participations funds; data on insurance sector include figures on commercial insurance companies. Data about investment companies and funds for 2000 till 2002 were revised on the basis of annual statistical surveys results.

Direct foreign investments in the Slovak Republic and investments of the Slovak Republic abroad express equity capital and reinvested profit.

Premium fixed by the law and settled claims by motor third party (liability) insurance responded to statutary insurance in 2001 and contractual insurance in 2002. Statutary insurance of organization for damage at working accident and occupational disease was transformed from the Slovak insurance, j.s.c. to the Social insurance since April 1, 2002.

All figures are given at prices and in methodology and organization structure of the current year.

Definitions

State budget expresses centralized financial fund of central government by which the state finances are created, divided and used.

Local budgets are compiled by local authorities or by them established subsidized organizations. Budgets contain expected revenues and approved expenditures of given bodies needed for fulfilment of their functions and works.

General government debt expresses accumulated financial liabilities of the general

government sector that are the consequence of obligations emiting, bank credits and other loans receiving in accordance with ESA 95 methodology for evaluation of maastrichts criteria.

Incomes from premium collection (for health and social insurance, pension security and insurance in unemployment) include payments according to the valid laws.

Other payments include incomes of the Social Insurance Agency from arrears of payments, fines, regression compensations and penalties.

Other compensations for health care include first aid, air transport, extra compensations over the Treatment Order standard, treatment abroad, etc.

Systematic sickness insurance benefits include sickness benefits, family member attendance allowance, equalising pregnancy and maternity allowance and maternity financial allowance.

Systematic pension security benefits comprise old-age, invalidity, long-term service, widow´s, widower´s and orphan's pensions, other pensions declared before January 1, 1957, contributions to pensions of members of closed farming co-operatives.

Social insurance benefits paid by state include increase of pension in case of sole source income, increase of pension in case of fight against fascism and rehabilitation, increase of pension in case of disability, social pensions, wife's pension, children's allowances and extra contributions to the children's allowances, parental allowance, compensations for earnings during serving in armed forces and in civilian service, reimbursement of health resonance.

The insured in health insurance companies refer to the summarized data from registers of insured persons in the individual health insurance companies.

Costs present the sum of costs on operation, financial transactions and extraordinary costs.

Profit/loss expresses the result of economic activity of reporting unit for the time period. It is calculated as a subtraction of revenues from expenditures and has character of profit or loss. For statistical purposes it is given before taxation.

Liabilities express payment obligation of a debtor to domestic or foreign creditors. They express foreign investments for financing of current operation. Bank credits and short term-financial subsidy are excluded.

Turnover represent revenues from own products, services and revenues from merchandise, which are realised by enterprise for all its activities. Data are aggregated by main economic activity of enterprise and are without VAT and excise duties.

Balance of payment contains the sum of all transactions (material as well financial) coming to the country and all transactions leaving the country abroad for the time period.

Money M1 – a money aggregate (mass of money) in the narrower sense of the word consists of the currency in circulation (after deduction of cash kept in bank teller's departments) and demand deposits (without the off-budget means of the governmental sector and the National Property Fund). Quantity of money in broader sense of the word – M2 (liquid liabilities) includes, in addition to all M1 components, also the so called "quasi money" QM i. e., time deposits (without the off-budget means of the governmental sector and the National Property Fund) and foreign currency deposits (only deposits of residents converted by the actual exchange rate).

Capital market is a form of credits providing, which repayability is longer than one year. The number of series of the securities issued is given by the Act No 566/2001 Code of Acts on Securities as amended and supplemented. Subscribed securities express the value of actually sold securities in a particular year.

Direct foreign investments in the Slovak Republic and investments of the Slovak Republic abroad is the foreign investment state since the beginning of the SR existence to the end of the relevant year. Foreign investment state as of December 31, 2003 is updated by state as of May 25, 2004. Data cover the capital part of the entrepreneurial subjects where the value of foreign assets and liabilities was more than 500 thousand SKK at the end of period and the value of invested capital was higher than 500 thousand SKK while the investment was direct or mediated through an investor. Data also include subjects with invested capital lower than 500 thousand SKK if other receivables and payables against abroad were higher than 500 thousand SKK and subjects fulfilled the reporting obligation.

Supplementary pension insurance of employees enables to obtain a supplementary old-age, invalidity, survivor's pension by insured or by his/her survivors in case of death. Activity of supplementary pension insurance companies is determined by the Act No. 123/1996 Code of Acts in the last wording.

Source

Source of published data on general government budgets is the Ministry of Finance of the SR.

Data source in financial sector is the National Bank of Slovakia, the Slovak Association of Insurance Companies, the Financial Market Authority and state statistical survey realised by the Statistical Office of the SR in this branch regardless of the number of employees.

All published data for the branch of compulsory social security and the branch of non-financial organizations are obtained from the statistical survey of the SO SR.

Data for branch of supplementary pension insurance have been obtained from administrative sources through the Ministry of Labour, Social Affairs and Family of the SR.

More information can be obtained in quarterly and annual publication Selected Indicators on the Health Insurance Companies, the Social Insurance Agency and the National Labour Office.

Methodological notes

In 2001, the **comprehensive revisions** of the weight structure and base period of individual spheres of monitored price indices were carried out in the area of price statistics. Since 2002 price indices have been published on structures derived from year base 2000, while the data for last years were recalculated by coefficients (conversion bridges) according to conditions of valid schemes. Since 2002, in accordance with European statistics has been published industrial producer price index without value added tax (VAT) and without excise duties.

Price indices in production branch express the rate of production price changes of inland producers realised on domestic market.

In 2003 the scheme of **industrial producers price index** contains app. 4 000 representatives (products) of inland serial industrial production classified into sections 10 to 41 of the Classification of Products by Activity (CPA). Constant weights derived from the structure of industrial receipts for year 2000 are used for the aggregation of individual products indices into higher classification levels. Since 1997 the total index of industrial producers prices has also covered the observation of drinking water prices. Price index of sewage water and its purification is surveyed individually. The base price period is December 2000.

Products prices are surveyed for selected industrial producers on “primary market” i. e. during first market transaction between producer and customer. Prices do not comprise value added tax and excise duties. Up to 2001 public time series of industrial producers price indices has covered impact of excise duties.

Price index of raw wood covers 14 selected products (representatives) of leafy and coniferous raw wood assortments (CPA 02). The index is calculated by using of constant weights derived from the sale structure in 2000. This index is published with 2000 average = 100 as a base. Prices of selected assortments of coniferous and leafy wood (excluding value added tax) are surveyed for selected more important producers.

The price index of agricultural products contains information on price level development for 93 main agricultural products (crop, livestock, fruit, vegetables) and fishes classified in CPA 01and CPA 05. Indices are calculated from surveyed prices of production assigned for further processing or sale. Calculation of aggregates is based on constant weighting system derived

from the average structure of agricultural production sales from 1996 to 2000. Prices of individual months of 2000 are the basis for price index calculation. The prices of agricultural products are surveyed in selected producers during the sale to a first customer (i. e. primary market) without value added tax.

Data on average prices of selected agricultural products are the average for selected qualities (without a non-standard) for crops and animals products and in fruit and vegetables for 1st quality.

The scheme of **price indices of construction works** is compiled from app. 2000 representatives – selected items of construction works (CPA 45). Weights system reflects the structure of construction production in 2000. The price base is average of 2000. Selected construction suppliers grant the prices for representatives without value added tax. Price of construction work per one measuring unit includes all costs needed to build a construction, i.e. materials, semi-finished goods, costs of the operation of construction machines, costs of transport, indirect costs (except equipment in the construction site) and profit. Indices has been published according Classification of Products by Activity (CPA) and Classification types of Construction (CC). Total price index of construction work consists of the price index of new construction and of the price index of repair and maintenance.

The price indices of supplies of goods and services into agriculture and the price indices of materials and components used in construction express the rate of price changes on input side.

The price index of supplies of goods and services into agriculture includes products and services purchased by agricultural producers and consumed by agricultural production. It is calculated from surveyed prices of 101 kinds of important purchased products and services (selection of respondents is identical with the selection for the price index of agricultural products) and from price indices of selected groups, or CPA classes, taken from industrial producers price index, price index of drinking and drainage water, construction works price index and the price index of communication performances. The index is published with 2000 average = 100 as a base. Value added tax is excluded from the purchase prices of products.

The price index of (production) materials and components consumed in construction contains price indices for selected materials and products (74 groups of CPA) taken from price index of inland industrial producers. The weights for index calculation were derived from the value of consumed construction materials in construction process in 2000. The base period is average of 2000.

The indices of consumer prices are calculated from the prices of individual representatives collected from the network of selected shops and service business.

Since January 2002, after comprehensive revision of consumer price indices, the development of consumer price indices has been surveying on an universal consumer basket established on the set of 703 representatives – selected goods and services paid by the population. A new, revised consumer basket was discussed and consented by the representatives of the statistical bodies, ministries, trade unions and others.

Consumer price index presents the price development on a generally averaged level.

Representatives of consumer basket are updated yearly. Since October 2002 number of representative items of universal consumer basket has been changed to 707 representative items. Consumer basket is divided by COICOP (Classification of Individual Consumption by Purpose Use) used by the countries of the European Union. Breakdowns of indices were designed in harmony with methodology of Eurostat; universal consumer basket is divided into 12 divisions.

Several standards required for calculation of harmonised consumer price index of member countries of the European Union are applied in processing of consumer price index.

Average consumer prices of selected products refer to averaged prices for the SR calculated from the prices surveyed in selected shops and service business.

Core and net inflation quantifies growth rate of price level on incomplete consumer basket. From the consumer basket there are excluded those items with regulated prices and items with prices influenced by other administrative measurements. The items which will be changed due to tax amendments (e.g. change of VAT, precise of duties, subsidies) stay a part of consumer basket, but influence of tax amendments is eliminated. Total inflation is divided into core inflation (influence of items with market prices), influence of items with regulated prices and influence of indirect duties (elimination of tax amendments). Core inflation represents the information by how much percentage should the price level be changed, if there is no price change due to administrative interference. It means that if there are no changes of administrative prices, contribution of core inflation is equal with total inflation. Contribution of core inflation (in percentual points) to total inflation is further divided in to contribution of net inflation and contribution of foodstuff prices. Reason for putting aside share of foodstuff from net inflation was the fact that foodstuff prices in the past were determined by considerable seasonality as well as non-market measurements (e.g. changes of guaranteed prices for the first producers, subsidies, import duties, quotas).

Definitions

The price indices are created as sample indices of constant structure (influence of structure change onto price index level is excluded). Summary indices are calculated by aggregation of individual simple price indices of representatives by convenient weights system, i.e. structure of receipts from sales of products (expenditure of households for goods and services) in the basic year. The index schemes (system of weights, representatives and respondents systems) are regularly (5 years interval) revaluated and adapted to actual structures. Since 2002 price indices are calculated against December 2000 or average of 2000. For calculation of price indices is used Laspeyres formula.

Producers price refers to contract price agreed between producer and inland customer invoiced for more important business transaction realised in the middle of current month excluding value added duty and costs for transport to purchaser and costs related to transport.

Consumer price is contract price agreed between seller and final consumer. It includes producer price, price of business performance (wholesale or retail trade margin), value added tax and other duties (e. g. excise tax).

Source

All published data are the result of regular surveys and processing realised by the Statistical Office of the SR.

Data source for calculation of price indices in production branch is the state statistical questionnaires submitted by selected reporting units. More information can be found in monthly publications Price Indices of Industrial Producers, Drinking and Drainage Water; Price Indices in Forestry (Raw Wood); Agricultural Products Price Indices; Price Indices of Construction Works, Materials and Products Consumed in Construction and in quarterly publication Price Indices of Products and Services Supplies to Agriculture.

Consumer prices of goods and services for calculation of average prices and indices of consumer prices are surveyed in selected shops and service business in the Slovak Republic. More information on consumer prices indices can be obtained in monthly publication Consumer Price Indices.

Pánske náramkové hodinky Quartz	1 kus	1 625,24	1 705,15	piece	Gentlemen's wristwatch Quartz

[1] v roku 2002 sa sadzba D1 označovala ako sadzba BS
[2] v roku 2002 ŠKODA Fabia 1,4 Classic (44 kW)

[1] In 2002 was tariff D1 denote as tariff BS
[2] In 2002 ŠKODA Fabia 1,4 Classic (44 kW)

III.1 Territory and Climate

Methodological notes

Selected data on location, area and the highest mountains of the Slovak Republic, meteorological data on selected stations, hydrological data on selected water courses, data on main rivers on the territory of the SR, areas of their basins and length of water courses creating a border of the SR on neighbouring countries are obtained from non-statistical sources on the basis of measurement, records and methodology used in corresponding institution.

Source

The Statistical Office of the Slovak Republic acquired geodesic data from the Geodesic and Cartographic Institute and from the publication Environment of the Slovak Republic published by the Ministry of Environment of the Slovak Republic. Meteorological and hydrological data were granted by the Slovak Hydrometeorological Institute.

More information can be obtained in given institutes.

III.1–1. Rozloha, hranice a povrch Slovenskej republiky v roku 2003
Area, borders and surface of the Slovak Republic in 2003

Ukazovateľ	V absolútnych číslach In absolute numbers	V percentách In per cent	Indicator
Rozloha k 31. 12. (km^2)	49 034	x	Area as of December 31, (km^2)
Hustota obyvateľstva na 1 km^2	110	x	Population density per km^2
Obvod (km)	1 663	100	Perimeter (km)
Dĺžka hranice (km) s			Length of the border (km) on:
Českou republikou	251,8	15,1	Czech Republic
Maďarskom	664,7	40,0	Hungary
Poľskom	541,1	32,6	Poland
Rakúskom	106,7	6,4	Austria
Ukrajinou	98,5	5,9	Ukraine
Najnižšie položené miesto – vyústenie rieky Bodrog zo SR (m n. m.)	94	x	Altitude of the lowest place – place where the river Bodrog is leaving the Slovak Republic (metres above sea level)
Najvyššie položené miesto – Gerlachovský štít (m n. m.)	2 655	x	Altitude of the highest place – Gerlachovský štít (metres above sea level)
Výškový rozdiel reliéfu – vo vzdialenosti 153 km (m)	2 561	x	Altitude difference of relief – in distance 153 km (m)
Najvyššia vyhasnutá sopka – Poľana (m n. m.)	1 458	x	The highest extinct volcano – Poľana (metres above sea level)
Najväčšia nížina – Podunajská nížina (km^2)	10 000	20,4	The largest lowland – Podunajská nížina (km^2)
Najväčší riečny ostrov – Žitný ostrov (km^2)	1 236	2,5	The largest river island – Žitný ostrov (km^2)
Výškové stupne povrchu (km^2)			Altitude degrees of surface (km^2)
nížiny (94 – 300 m n. m.)	20 045	41,0	Lowlands (94 – 300 metres above sea level)
nízke vysočiny (301 – 750 m n. m.)	22 089	45,0	Low highlands (301 – 750 metres above sea level)
stredovysočiny (751 – 1 500 m n. m.)	6 350	13,0	Middle highlands (751 – 1 500 metres above sea level)
vysoké vysočiny (1 501 – 2 655 m n. m.)	552	1,0	High highlands (1 501 – 2 655 metres above sea level)
Najdlhšia dolina – Bielovodská (km)	10	x	The longest valley – Bielovodská (km)
Rozloha krasu (km^2)	2 700	5,5	Area of carst (km^2)
Najhlbšia jaskyňa – Starý hrad (m)	432	x	The deepest cave – Starý hrad (m)
Najdlhšia jaskyňa – Systém Demänovských jaskýň (km)	30	x	The longest cave – Demänovské jaskyne System (km)
Celková dĺžka evidovaných tokov – riečna sieť (km)	49 775	x	Length of registered water courses in total – river net (km)
Najdlhšia rieka – Váh (km)	378	x	The longest river – Váh (km)
Najväčšie jazero – Veľké Hincovo pleso (ha)	20,08	x	The largest lake – Veľké Hincovo pleso (ha)
Najvyšší vodopád – Kmeťov (m)	90	x	The biggest waterfall – Kmeťov (m)
Prírodné liečivé zdroje	54	x	Natural curative sources
Využiteľné množstvo podzemných vôd ($m^3.s^{-1}$)	74,37	x	Available volume of subsoil waters ($m^3.s^{-1}$)
Výskyt geotermálnych vôd (lokality)	106	x	Finding places of geothermal waters (localities)

III.1–2. Poloha územia Slovenskej republiky
Location of the Slovak Republic's territory

Medzná súradnica Limiting coordinates	Poloha Location	
	Okres District	Obec Municipality
Južná 47°43'54" s. š. Southern 47°43'54" N	Komárno	Patince
Severná 49°36'52" s. š. Northern 49°36'52" N	Námestovo	Oravská Polhora
Západná (Greenw.) 16°50'05" v. d. Western (Greenw.) 16°50'05" E	Malacky	Záhorská Ves
Východná (Greenw.) 22°34'04" v. d. Eastern (Greenw.) 22°34'04" E	Snina	Nová Sedlica

III.1–3. Maximálne dĺžky na ploche Slovenskej republiky
Maximum distances on the area of the Slovak Republic

Ukazovateľ Indicator	Vzdušná vzdialenosť (km) Beeline distance (km)
Spojnica najsevernejšieho a najjužnejšieho bodu Connecting line of the northernmost and southernmost points	226
Spojnica najzápadnejšieho a najvýchodnejšieho bodu Connecting line of the westernmost and easternmost points	429
Maximálna dĺžka v smere poludníka Maximum distance in the direction of the meridian	197
Maximálna dĺžka v smere rovnobežky Maximum distance in the direction of the parallel	395

III.1–4. Meteorologické údaje za vybrané stanice

III.2 Population

Methodological notes

Data on **natural movement of the population** are obtained from statistical reports on population phenomena (marriages, divorces, births, deaths) and from the related population balances.

Data cover all inhabitants residing permanently in Slovakia regardless of their citizenship. In this branch the statistical bodies closely collaborate with further government bodies, which are reporting units (registry, law courts).

The basis for next ten years term balancing is regular decennial population censuses. Demographic statistics includes the statistics on spontaneous and induced abortions.

The methodology and the content of demographic statistics is internationally comparable.

The processing by classification point of the view is done according to the code-lists of administrative-territorial division, nationalities and education.

Number of the population by nationality between two censuses on population is obtained from the balance of movement of the population. The nationality of live-born children is determined by the nationality of the mother.

Death causes have been processed according to the International Statistical Classification of Diseases and Related Health Problems, the tenth revision.

Migration statistics is surveyed in two levels: internal migration and external migration.

Internal migration from municipality to municipality in the same district implies either moving among the urban areas in Bratislava and Košice.

External migration is a change in the country of residence, irrespective of nationality. Names of the countries are used according to the ISO standard No 3166.

Stay registration offices of municipal and town offices, district police directorates and departments of border and alien police in Bratislava are included in reporting units.

Definitions

Population in **pre-productive age** consists of inhabitants aged from 0 to 14. Population in **productive age** includes men aged from 15 to 59 and women aged from 15 to 54. The **post-productive age** population includes men and women aged 60 and more and 55 and more, respectively, including not specified age.

Mid-year population is the number of the population as of July 1 of the reference year.

Ageing index represents the ratio of post-productive population to pre-productive population.

Neonatal mortality is the number of deaths of children under 28 days of age per 1 000 live-born children in the same period.

Infant mortality are the deaths of children under 1 year of age per 1 000 live-born children in the same period.

A live-born child is a child showing at least one of the following signs of life at birth such as breathing, beating of the heart, pulsation of the umbilical cord, active movement of muscles though the umbilical cord has not been cut or the placenta has not been born. At the same time, the birth weight is

a) 500 and more grams or

b) 499 grams and less if a child survives 24 hours after its birth.

Natural increase in the population shows the difference between the number of live-born children and number of the deceased.

Net migration is the difference between the number of immigrants and the number of emigrants.

Total increase it is the sum of natural increase and net migration.

Women aged 15 – 49 belong to the so-called **"fertile age"** group.

Total fertility rate represents the number of live-born children that would be delivered by each woman throughout her whole reproduction period (from 15 to 49 years of her age), provided that during this reproduction period the fertility rate of women by age has not been changed and remains at the level of the year for which total fertility has been calculated.

Gross reproduction rate shows how many live-born girls would be delivered by one woman throughout the whole reproduction period, i. e. from 15 to 49 years of her age, provided that the fertility rate level in the reference year was kept on.

Net reproduction rate shows how many of these girls would live to the mother's age reached at the time of their birth if the mortality level in the reference year continued.

Source

All published data for demographic statistics are the result of the collection and the processing in the Statistical Office of the SR, except primary data relating abortions, which are obtained from the sector surveying of the Ministry of Health of the Slovak Republic realized by the Institute of Health Information and Statistics (ÚZIŠ) in Bratislava and consequently processed by the SO SR.

More information can be found in semi-annual and annual publication State and Movement of the Population and in annual publications Age Structure of the Population; Balance of Movement of the Population by Communities; Balance of Movement of the Population by Nationality and Marital Status; Life tables and Development of the Population.

Information on the basic data from the Cenzus on population, houses and dwellings can be found in publication Basic data, Population, National structure of population, Religion of population and Houses and dwellings. Another data on population, houses, dwellings and households are processing in publications in detailed structure for the SR, regions, districts and municipalities.

Methodological notes

Labour force sample survey is a permanent monitoring of labour force on the basis of a direct surveying in selected households. The survey is based on a random selection of dwellings in all districts of the Slovak Republic. Every quarter the sample covers 10 250 dwellings, which is 0.6 % of the total number of permanently occupied dwellings in the Slovak Republic. The survey covers all persons aged 15 and over who live in the households of the selected dwellings without regards to permanent, temporary or unregistered stay, institutionally population excepted. Each selected household remains in the sample for 5 subsequent quarters. All surveyed figures are recalculated by the current data on the population of the SR incurred from statistical surveys about population movement.

In processing by classification viewpoints there are Classification of Occupation, Classification of Education and others applied.

The methodology of the survey is recommended by the International Labour Organizations and by the Eurostat.

Employment and wages by enterprise reporting are surveyed in the framework of monitoring of the SR economy development. Persons on maternity leave and armed forces are not included among employees. Processed data for organizations with 20 and more employees are classified by regions and districts, by staff categories, by kind of property and by legal form of organization. Numbers of employees are presents in persons.

Basic information on the development of wages is completed with data on the **structure of gross nominal monthly wages** obtained by sample survey on the structure of employees wages in the Slovak Republic. In processing by classification viewpoints there are Classification of Occupation, Classification of Education, the Code-Lists of Regions, Sex and Age applied.

Wages statistics also includes the survey on **total labour costs** of employers in the Slovak Republic. The more detailed classification of the labour costs uses the Code-Lists of Regions, Staff Categories, Kind of Property and Legal Form of Organization.

The methodology of the sample survey on the structure of wages and total labour costs is recommended by the Eurostat and responds to the related European regulations.

Since January 2002 data on graduates of schools include graduates registered at labour offices, social affairs and family during the period of one year and since February 2002 registered during the period of two years since the end of continual professional training.

The processing of selected labour market indicators uses the Branch Classification of Economic Activities (NACE).

Definitions

Economically active population by labour force sample survey (LFS) are persons aged 15 and over who are civilian employed, unemployed or members of the armed forces (conscripts and professionals in military service).

Economically inactive population by LFS are persons who have no job in the reference week because they are students and apprentices, pensioners, persons keeping household, persons in re-training course and therefore they do not seek a job actively during the last four weeks or they are seeking a job but they are not able to start work within two weeks. Persons on parental leave, discouraged workers (they would like to work but they do not seek a job because they do not believe to find adequate job) and persons younger than 15 years are also included.

Economic activity rate by LFS is calculated according to the following formula:

$$\text{Economic activity rate in per cent} = \frac{\text{Economic active population}}{\text{Population in productive and post-productive age}} \times 100$$

Population in productive age are men aged 15 – 59 and women aged 15 – 54, population in post-productive age are men aged 60 and more and women aged 55 and more.

Employed by LFS are all persons aged 15 and over who are working at least one hour for pay or profit (full-time or part-time job, permanent, temporary, casual or seasonal job) in the reference week, as well as contributing (unpaid) family workers, professionals in military service, persons in civil service and persons working abroad. Data on employed include persons not working in the reference week due to illness, holiday, maternity leave, study,

weather conditions and strike or dispute, except persons on long-term unpaid leave from work. Persons on parental leave are not included among employed.

Employees by LFS are persons aged 15 and over who work in the reference week at least one hour and who receive compensations in the form of wage or salary, including members of productive co-operatives. **Employees according to the enterprise reporting** are all the stable as well as temporary employees regardless of their citizenship who have a contract of employment, service or membership with the employing organization. Students attending vocational secondary schools, persons on compulsory military or civil service, persons on maternity and parental leave and persons working upon contract are not included among employees. The number of employees in the economy of the Slovak Republic does not include members of the armed forces.

Self-employed by LFS are entrepreneurs with employees (employers), entrepreneurs without employees (own-account workers) and contributing (unpaid) family workers.

Employment rate 15 – 64 by LFS is calculated according to the formula:

$$\text{Employment rate 15 – 64 in per cent} = \frac{\text{Number of employed persons at the age of 15 – 64}}{\text{Number of population at the age of 15 – 64}} \times 100$$

Unemployed by LFS are all persons aged 15 and over who are not working for pay or profit during the reference week, who are actively seeking job during the last four weeks and who are able to start work in the next two weeks. Those persons can, but need not be registered at labour offices, social affairs and family as unemployed. The category of unemployed also includes persons not in employment who had already found a job which will start within one month (in 2003 – during three month).

Unemployment rate by LFS is calculated according to the following formula:

$$\text{Unemployment rate in per cent} = \frac{\text{Number of unemployed persons by LFS}}{\text{Economically active population by LFS}} \times 100$$

Economically active population in the denominator of the formula excludes persons on parental leave.

Duration of unemployment by LFS is defined as the shorter of the following two periods: the duration of search for work, or the length of time since last employment.

A registered unemployed is a person who is neither in employment nor a member of an organization, does not perform any independent gainful activity, nor is getting ready for an occupation and is personally applying, on the basis of a written application, for the intermediation of an appropriate job at labour offices, social affairs and family. People who are interested in a job and are in employment or perform an independent gainful activity and are interested in a different job are not included. Methodology of indicators has been determined by the Ministry of Labour, Social Affairs and Family of the SR and is available in the Act No 387/1996 Code of Acts on employment.

The registered unemployment rate (methodology of the Ministry of Labour, Social Affairs and Family of the SR) is calculated according to the following formula:

$$\text{Registered unemployment rate in per cent} = \frac{\text{Disposable number of registered unemployed}}{\text{Economically active population}} \times 100$$

Economically active population in the denominator of the formula covers employed including persons on maternity and parental leave and registered unemployed.

The registered unemployment rate is calculated from **the disposable numbers of the registered unemployed** who can immediately, after being offered a suitable job, start to work. This practice complies to the convention of the International Labour Organization.

Vacancies are new or out-standing vacancies reported by employers to labour offices, social affairs and family.

Average gross nominal monthly wage consists of basic (tariff) wage set by wage rules including basic components of contracted wages and salaries for working overtime, compensation of wage for hours not worked, monthly and long-term bonuses paid according to the performance and evaluation criteria, extra payments for working overtime, the night work, work during Saturdays and Sundays, holidays, for environment damaging health, noise,

risky and hard work, in-kind wages express in financial terms and other wage in the form of wage advantages whose level and periodicity are set in advance regardless of the situation in an enterprise.

Total labour costs represent a sum of cost spent by employer to recruit and train their employees, remunerate their work as well as to ensure their social welfare according to obligations adopted. Total labour costs include both direct labour costs and indirect labour costs minus subsidies. **Direct labour costs** are the sum of wages and wages compensation, payments to employee's savings schemes, compensation for being on call to work, bonuses based on profit after taxation and other direct costs. **Indirect labour costs** include statutory and supplementary social security contributions paid by employer, social allowances, employer's social contributions for apprentices, social benefits, vocational training costs paid by the employer, taxes linked to wages paid by employer and other expenditures paid by the employer. **Subsidies** are the sum of all amounts received in the form of subsidies, which are intended to refund a part or all of the cost of direct remuneration.

Source

All published data are the result of the processing in the Statistical Office of the Slovak Republic, except data relating registered unemployed. This data are supplied by the Central Office of Labour, Social Affairs and Family of the SR.

More information can be obtained in quarterly publications Employees and Average Monthly Wages; Labour Force Sample Survey Results and in annual publications Structure of Wages and Total Labour Costs.

III.4 Fixed Assets

Methodological notes

Fixed assets (capital assets) data cover the value of the assets of all legal entities. They do not include the value of fixed assets of tradesmen, population and fixed assets owning by churches in case that the legal procedure and pricing has not been finished. The data on fixed assets for 2002 were presented for the economy in total in the summary table containing basic indicators; all other tables present the corporations with 20 and more employees.

Branch classification is given according to main economic activity of reporting subjects. Ownership is aggregation of included owners of fixed assets into particular groups according to the main kind of ownership.

Fixed assets are given at purchase prices i. e. in prices, for which fixed assets were purchased or produced in time of acquisition. The data express residual price of fixed assets after deduction of consumption, i. e. value of fixed assets yearly permanently consumed in consequence of physical depreciation and foreseeable obsolescence including security from losses of fixed assets.

Since January 2003 in connection with new act on accounting was supplemented some new component, other existing was specified. The input price of tangible and intangible fixed assets was increased. Mentioned changes are not show in this chapter yet, since latest published data are for 2002.

Definitions

Fixed assets consist of all assets of intangible and tangible character on which an economic subject has the right of ownership or right of management. Fixed assets consist of two groups of assets: intangible and tangible.

Intangible fixed assets consist of incorporation expenses, capitalization development costs, software, copyrights, patents, licenses, trademarks, low-value intangible fixed assets and other intangible fixed assets, whose value in individual cases is more than 40 thousand SKK, the service life is more than 1 year. Intangible assets whose individual components have

the value of 40 thousand SKK and less while the service life is longer than one year may be included into low-value intangible fixed assets if so decided by an accounting unit.

Tangible fixed assets are the real estates and separate movable things or sets of movable things whose value is more than 20 thousand SKK in individual case and the operational and technological function is longer than one year. The accounting unit may set that the tangible fixed assets also include low-value tangible fixed assets whose purchasing price is less than 20 thousand SKK and operational and technological function is longer than one year.

Completed dwellings are those that were passed as acceptable by an approving officer after construction completion. It refers to completed dwellings in constructions intended for living, i.e. in housing buildings, family houses and in polyfunctional buildings. There are included also dwelling in constructions undisposed for living, for example in administrative buildings, banks, posts, stations. Completed dwellings refer to dwellings acquired by new construction, improvements or another construction repairs.

Average living area of completed dwelling expresses housing space (m^2) per one completed dwelling.

Living floor area of completed dwelling is the area of all rooms of completed dwelling. There are not included common non-housing space serving for all users of dwelling (staircase) and non-housing rooms used by dwellings users (cellars, room for prams, common laundry) and balconies or loggias.

Decrease of dwellings includes dwellings that were eliminated from dwelling fund by particular decision of construction office.

Fixed assets at purchasing price express the value of their acquisition including costs spend for their acquisition. It can be a purchase of new or fixed assets used before by another subject, own-account production, restitution of property based on legal regulations (restitution, legal decisions), dedication, transfers between corporations. The change is, on the other hand, influenced by disposals of fixed assets occurring during the year, e.g. a sale, transfers by legal regulations, liquidation of fixed assets caused by full depreciation or dedication of fixed assets to another corporation or subject.

Fixed assets in residual value express the value of assets after deduction of depreciation from purchasing price or it is difference between purchasing price of fixed assets and amount of created depreciations. Evaluation of fixed assets is given by account data.

Fixed assets by groups include all kinds of tangible and intangible fixed assets.

Consumption of fixed assets represents depreciation – the amount of fixed assets used up during the year as a result of production activity as well as service providing.

Source

All published data are the results of the processing of the Statistical Office of the SR, where further information will be available.

Methodological notes

Research and development (R&D) surveys are realized by legal and natural persons in which research and development is their prevailing activity, as well as legal and natural persons whose prevailing activity is different from research and development, but their R&D potential calculated to the full time equivalent (FTE) is equal at least to one man/year.

R&D activities include basic research, applied research and experimental development.

Methodology and content of R&D statistics is comparable with international statistics of the European Union.

Licence statistics includes a licence contracts between an inland and a foreign partner, content of which is the intellectual property. Licence surveys are carried out in all enterprises with 20 and more employees, which have valid licence contract with a foreign organization during the whole period of validity of the licence contract till year, when the validity of the last licence is expired.

Data are presented for licence contracts made in the current year, as well as for all licences that were in force in the given period.

Industrial legal protection statistics contains patents, utility models, designs and trademarks.

Statistical survey on **certification** includes certified products and certified quality management systems. Reporting units are the industrial corporations with 20 and more employees.

The data are presented for the new products introduced and certified in the current year and for new organizational parts of the reporting unit that obtained a certificate for their quality management system by the ISO 9000 standards in the current year, as well as for certificates granted in the past years which were valid in the given year.

Surveys methodology about innovation in the SR was harmonized with the third Community Innovation Survey of the EU countries (CIS3) for 1999 – 2001. The survey was a sample survey on 2 106 enterprises with 10 and more employees in industry and selected services

which sample corresponds to 33,7 % of total number of enterprises in the given branches and size classes of enterprises.

Data are presented in the prices and by methodology of the current year.

Definitions

The number of **R&D employees** includes only persons employed directly in the field of research and development as well as persons providing direct services to research and development. Total number of R&D employees includes also pedagogical staff at higher education institutions who within the framework of their work to a certain extent participate in research and development.

Category of “researchers” comprises employees essentially important to the creation and use of the scientific knowledge.

Technicians and equivalent personnel includes employees participating in research projects by performing scientific and technical tasks usually under the supervision of researchers.

Supporting staff includes qualified and non-qualified workers, secretaries and other employees participating in the work on R&D projects. Further there are included other managers and administrative workers dealing with personnel and financial matters whose activities are qualified as a direct service supporting research.

Expenditures on research and development comprise total amount of expenditures spent in an organization on R&D activities, i.e. they are internal expenditures. Expenditures spent out of the organization include only those serving for support to the internal research and development (for instance purchase of equipment for R&D institutions). Depreciation of buildings, machines and equipment is excluded from statistical observation of internal expenditures on R&D.

Current expenditures comprise costs of own activities of organizations and workplaces for research and development and costs for tasks solved by the own capacity of an organization and a workplace. (It is a sum of operational and financial costs related to R&D activities).

Licence is a contract between a domestic organization and a foreign partner for the acquisition (purchase) or provision (sale) of the right to the use of: an invention under copyright, industrial design, a trademark of an original owner and know-how. Licences are divided from the point of view of their purchase or sale into:

a) Passive licence is a licence bought from abroad, on the basis of which domestic organizations produce or use it.

b) Active licence is a licence sold abroad.

According to the Act No 527/1990 Code **patents** shall be granted for inventions which are new, involve an inventive step and are susceptible of industrial application.

It is possible to protect as **utility models** technical solutions which are new, exceed the framework of the mere professional ability and are susceptible of industrial application but do not comply with the strict terms for the granting of a patent. Contrary to the protection by a patent, neither process or production nor biological reproductive matter shall be protected by a utility model.

External appearance, which shall be new and susceptible of industrial application is considered as a **design**. The external appearance shall comply with these conditions: it shall be two- or three-dimensional and have the unique features in particular of its shape, contour, design, colour arrangement or combination thereof.

Trademark shall be denomination consisted of the words including personal names, letters, numbers, designs, product's shape or its packing or combination thereof as well as colour combinations, which are capable of distinguishing goods and services of different entrepreneurs and which have been registered in the trademarks register.

Classification of inventions by subject is based on the international patent classification.

Certified products are the products with a valid certificate issued either by an accreditation place on the basis of the Act on State Testing Lines or by a foreign organization. A certificate verifies that the properties of a certified product are in conformity with the relevant standards, technical documents or laws.

Certified quality management system is a system of quality provision of a proposal, development, production, assembly, installation and service in a productive organizational component of a reporting unit. This system was certified by a Slovak certification body or a foreign organization.

Innovation is a new or significantly improved product (good, service) introduced to the market or introduction of a new or significantly improved process within an enterprise. Innovations are based on the results of new technological developments, new combinations of existing technology or the utilisation of other knowledge acquired by the enterprise. Innovations may be developed by the innovating enterprise or by another enterprise; however

purely selling innovation wholly produced and developed by other enterprises is not included as an innovation activity. Innovations should be new to the enterprise concerned; for product innovations they do not necessarily have to be new to the market and for process innovations the enterprise does not necessarily have to be the first to have introduced the process.

Product innovation is a product (good, service) which is new or significantly improved with respect to their fundamental characteristics, technical specifications, incorporated software or other immaterial components, intended uses or user friendliness. Changes of a solely aesthetic nature and pure sale of product innovations wholly produced and developed by other enterprises are not included.

Process innovation includes new or significantly improved production technologies or new and significantly improved methods of supplying services and delivering products. The outcome of such innovations should be significant with respect to the level of output, quality of products (good or service) or costs of production and distribution. Purely organisational or managerial changes are not included.

Enterprises with innovation activity are enterprises that have had any kind of innovation activity during the surveyed period, i.e. have introduced new products or processes or have had on-going or abandoned innovation activity.

Successful innovators introduced product innovation or process innovation.

III.6 Organizational Structure of the Economy

Methodological notes

Data on **organizational structure of the economy** are compiled on the basis of data kept in the Register of Organizations of the Statistical Office of the SR. The register is created and updated by the Statistical Office of the SR according to the Act No 540/2001 Code of Acts on Government statistics in wording of later regulations. The Register of Organizations of the SO SR is regularly updated by data from Business Register, Tradesmen Register and from statistical surveys. It contains identification and classification characteristics on legal persons and natural persons-entrepreneurs.

Data in the tables are processed after updating of the register SO SR by results of Small and Medium Enterprises Census 2002. Data concern only those legal and natural persons-entrepreneurs specified in the Register of Organizations of the SO SR as economically active.

Definitions

Legal persons are legal entities. The law adjusts their existence independently on individuals or institutions that are their owners or their members.

Natural persons-entrepreneurs non incorporated are persons, who undertake on their own liability according to special rules. These are tradesmen (persons running business on the basis of the tradesmen law), persons with freelance professions (persons running business on the basis of a law other than tradesmen law e. g. lawyers, physicians, auditors and others) and self-employed farmers.

Enterprises are legal persons performing systematic activity to make profit. There are included corporations (enterprises in ownership of groups of subjects e.g. joint stock companies, co-operatives, limited partnerships etc.) and quasi-corporation (enterprises in ownership of one subject).

Enterprice birth subjects are those, which were founded as legal persons or natural persons – entrepreneurs and in surveyed period were included in the Register of Organizations of the SO SR.

Enterprice death subjects are legal persons or natural persons – entrepreneurs cancelled according to the legal rules and in the surveyed period were excluded from the Register of Organizations of the SO SR.

Non-profit oriented institutions are legal persons serving to financial and non-financial corporations, government and households e. g. budgetary organizations, subsidized organizations, whose receipts don't exceed 50 % of presented costs, associations, political parties, churches and others.

Public sector includes enterprises in state, municipal and international ownership being under the state control.

Private sector includes enterprises in ownership of private inland and foreign legal persons as well as natural persons – entrepreneurs and enterprises with foreign interest not being under the state control.

Foreign ownership includes subjects founded and controlled by a foreign legal person or natural person – entrepreneur.

International ownership includes the subjects that were founded jointly by a inland and a foreign legal person or a natural person – entrepreneur.

Methodological notes

In total number of **protected territories** are included all categories of protected territories of a nature and of a landscape: protected landscape areas, national parks, natural reserves, national natural reserves, natural monuments, national natural monuments and protected areas.

Some protected territories from categories natural reserve, national natural reserve, natural monument, national natural monument and protected area are also located in the area of protected landscape areas or national parks, therefore their area is included into the area of these categories, too.

Penalties for air pollution as well as in the sector of water management, waste management and nature protection are imposed on legal entities for breaking their duties provided by the relevant laws and administrative orders.

Environmental costs are financial resources spent in period under consideration on the erecting, purchase or provision of long time intangible and tangible assets, used on protection of environment (i.e. protection of the air, waters, land and other factors of environment) as well as on the costs connected with this assets operation.

Intensity of **immission load** in interaction with ecological factors is expressed by zones of endangered forests – categories A, B, C, D:

Zone A comprises areas with a strong long-term load in the localities exposed to intensive air streams from immission sources (local and from long-distance pollutant transport).

Zone B includes areas under the same immission conditions as Zone A but under better ecological conditions in the localities partially protected against direct air streams from immission sources.

Zone C comprises areas under more favourable ecological conditions with a lower immission load.

Zone D are protected fluvial areas of various altitudes with a low immission load and low level of air pollution.

Endangered zones are those parts of forest ecosystems where intensity of load together with ecological conditions and climatic factors causes their dynamic damages. Attributes of these zones are the level of immission load and longevity of stands of a specific species composition derived from the model for mature spruce stands.

Degrees of damage to stands are derived from the state of stands and are based on the evaluation of defoliation and depigmentation of trees. A qualification scale of the international health monitoring is applied.

0 – Healthy trees, damage (0 – 10 %)
1 – Slightly damaged trees (10.1 – 25.0 %)
2 – Medium damaged trees (25.1 – 60.0 %)
3 – Heavily damaged trees (60.1 – 90.0 %)
4 – Dying and dead trees (90.1 – 100 %)

Abiotic injurious factors (drought, wind, snow) are important from the point of view of volume of salvage felling. Together with immissions produce conditions for further activation of biotic factors.

The most important biotic injurious factors are insect, vertebrate animals (mainly game animals) and fungal diseases.

Categorization of game to commercial and predacious animals is from practical point of view relative and is important mainly from economic standpoint. For this reason a notion of "predacious animals" started to be used under which belong individual game species (predators) that cause damage to commercial game (it is a component of the food chain). Division of game into furred and feathered one is a species division and is of biological importance.

Data on **xenobiotics** in foodstuff were received from records on individual cases during the reference year.

As a limit is defined the highest acceptable amount of xenobiotics in the given foodstuff; is determined by the Bulletin of the Ministry of Health of the Slovak Republic, Part 9 to 13, of July 15, 1996.

Values presented as average represent an average content of xenobiotics in concerning foodstuff calculated from individual contents.

Data on **waste** originating in the territory of the Slovak Republic are surveyed according to the Act No 223/2001 Code of Acts, by the Decree No 283/2001 Code of Acts and by the Decree No 284/2001 Code of Acts.

The separate table shows the amount of municipal waste and similar waste not treated by municipality and which was produced in activities of legal or natural persons entitled to enterprising in particular branches of the economy of the SR.

Definition

Protected territory is geographically defined territory determined or controlled and administrated for the purpose to reach the specific aims of protection.

Current cost is the sum of internal and external environmental costs, recoverable by other subject.

Hunting ground is continual hunting land up to 500 ha at least.

Xenobiotics in foodstuff are those that are not a natural component of foodstuffs and they are not characteristic for the given kind of foodstuff or their amount can have a negative impact on the human health.

Waste is an article, its owner wants to get rid of or things, which must be removed from the point of view of care on proper living conditions and protection of environment.

Municipal waste is the waste originating in municipalities and is treated further by the municipality. Households waste and waste produced in activities of municipality, legal entities, transport, recreation and sport are included.

Source

Data on protected territories and national parks are provided by the Ministry of Environment of the SR. Data on hunting ground, hunting and spring stock of game are taken from materials of the Ministry of Agriculture of the SR. Further information can be obtained in these organizations.

Data on municipal waste and environmental costs are results of the processing of the Statistical Office of the SR. Data on waste in the economy of the SR are taken from administrative sources of the Ministry of Environment of the SR. More information can be obtained in the publication Waste in the Slovak Republic and Environment in the Slovak Republic.

Methodological notes

Data on **emissions of major pollutants** by economic activities cover pollution of air by injurants produced by industry, energetics, agriculture, transport, housing and municipal spheres. The quality of air depends on the level of emissions from individual sources of air pollution and is expressed as immissions monitored by individual monitoring stations.

Data on emissions for energetics and process combustion include data for emissions from process combustion and from stationary units for fuel combustion with thermal output of 0.2 to 5 MW which are the part of technological units.

Local heating facilities also include central heating with the output up to 0.2 MW.

Emissions from industrial technological processes are the sum of emissions from relevant technological processes and emissions from combustion processes which are the part of the source (boiler house).

Levels of emissions and specific emissions in selected districts with largest specific emissions are only for stationary sources of pollution.

Levels of **immissions in selected localities** are assessed on the basis of a continual measurement done at individual monitoring stations.

Data on regional air pollution are presented for the four monitoring stations (Chopok, Liesek, Stará Lesná, Starina), which are the part of the European monitoring network EMEP.

Levels of **surface ozone** in selected monitoring station are assessed on the basis of the eight-hour concentration (time of measurement is from 9 a. m. to 5 p. m.). The target value for the protection of human health is 120 $\mu g/m^3$.

Regional pollution of precipitation informs on acidity and chemical composition of precipitation obtained from regional monitoring stations and from city station in Bratislava.

Definitions

Mobile sources of air pollution are the road, railway, water and air transport equipment with explosion engine or other driving engines.

Stationary sources of air pollution are all the other sources emitting pollutants.

PM_{10} are dust particles with aerodynamic diameter of beads less than 10 μm.

Regional air pollution is a pollution of the atmosphere boundary layer in the countryside sufficiently far from the local industrial and urban sources. Injurants in this layer of the atmosphere are getting involved into the global circulation.

Source

All data on air quality are taken from the Slovak Hydrometeorological Institute, where further information is available.

IV.3 Water

Methodological notes

Water-supply systems and sewage include waterworks activities related to the administration and operation of water-supply and sewage systems, i. e. production and supplies of drinking water and drainage of sewage water and its purification.

Length of dikes protecting against flooding is measured in the axis of a dike and on each bank separately. Length of artificial canals and intakes includes also canals and intakes kept in covered profiles.

Values of individual pollutants drained off into the water courses are presented for the water plants and sewage companies as well as for the river-basin companies.

Values of the **water pollution** are shown for producers monitored by the water plants and sewage companies as well as river-basin ones.

Categorization into individual quality categories by five groups of indicators is done by the STN 75 7221 Classification of the Surface Water Quality.

A set of indicators – oxygen balance
B set of indicators – basic physical and chemical indicators
C set of indicators – nutrients
D set of indicators – biological indicators
E set of indicators – microbiological indicators

Surface water by water quality is categorized into the following 5 categories:

Category 1 – very pure water
Category 2 – pure water
Category 3 – polluted water
Category 4 – heavily polluted water
Category 5 – very heavily polluted water

Definitions

Dam is an inflating construction damming up the river-bed or, exceptionally, valley that

serves for formation of a reservoir to get a permanent or temporary inflation of the water for various waterworks purposes.

Water reservoirs are these from which water offtake for public water supply is realized.

Controllable volume of water reservoirs is a total controllable capacity of reservoirs where it is possible, regardless of tributaries to the reservoir, to accumulate and to empty the water as necessary. Retentive volume of water reservoirs is a controllable protective capacity of the reservoir. Reserve volume of water reservoirs is a part of the total reservoir capacity that serves for improving flow and for securing water taking in drought areas.

Area of territory endangered by floods includes the area that is endangered by the high water. High water is 10 years old water (Q 10) and 100 years old water (Q 100). We give approximate figures.

Area of the territory protected against floods includes the area that would be flooded because of higher flows of the water in water-courses in case that the retentive capacities of reservoirs, adjustments to water courses or preventive dikes were not built.

Production of drinking water includes total amount of drinking water produced in water-supply stations themselves under the administration of companies of water plants and sewage and municipalities after adding an amount of drinking water taken from other waterworks organizations or from other water suppliers (legal persons) and after subtracting an amount of drinking water delivered free of charge to waterworks organizations (e. g. among units of water plants and sewage companies).

Invoiced water includes the amount of drinking water sold to direct customers.

Non-invoiced water includes losses of the water in the pipe network, own water consumption or possible free water supplies, e.g. for fire protection purposes.

Sewage disposal plants are facilities purifying sewage water, applying mechanical and biological way of purification or the so-called third stage of purification applying mechanical and biological additional purification. Sewage disposal plants do not include facilities for rough pre-purification of sewage (sand-traps, oil-traps, etc.), septic tanks, cesspools and simple facilities that are not observed and served regularly.

Suspended solid pollutants are substances determined by water filtration and dehydration of the rest (on filter) at 105˚C to constant weight.

Oil pollutants are the substances extracted from water excluding polar substances that can be separated from the extract by a standard way.

Biochemical oxygen demand (BOD) is the volume of oxygen consumed in aerobe biochemical decomposition process of organic compounds present in the water for the period of 5 days at standard conditions.

Chemical oxygen demand (COD) is a consumption of oxygen (O_2) by dichromate method.

Source

Data on water management are obtained from the surveys realized by the Statistical Office of the SR and data on water quality are taken from the Slovak Hydrometeorological Institute and from the State Health Institute.

More information can be obtained in the publication Water Management and in the organizations mentioned above.

V.1 Agriculture

Methodological notes

Agriculture includes all legal entities (legal and natural persons) which are active in crop and livestock production, in related service activities and fish-hatcheries.

The basic statistical unit for the purposes of the statistics on soil fund and crop production, is considered as:

a) total of agricultural land with the area larger than 0,10 ha;
b) total of agricultural land with the area up to 0,10 ha
   – if the products from this land are usually sold
   – if there is a vineyard on the land with the area larger than 0,05 ha;
c) total of the forest land or ponds with the area larger then 0,10 ha if these cultures are not a part of the agricultural establishments under the point a).

Every breeder of farming animals who breeds them for sale or for next processing including agricultural enterprises and other breeders without agricultural land or with agricultural land up to 0,10 ha in area are basic statistical units for the purposes of the livestock production statistics.

All recalculations concerning intensity of agricultural production take into account either agricultural or arable land belonging exclusively to agricultural establishments.

Summary data on gross agricultural production (see chapter I. Slovakia from 1960 to 2003) are for agriculture in total, i. e. including calculation for small enterprises and population. The structure of **gross agricultural production** is given for incorporated entrepreneurial entities employing 20 and more employees.

Root crops in **the structure of land use** includes potatoes, sugar-beet and feeding root crops. Industrial crops includes oil seeds, fibre plants, tobacco, hops, succory root, medical and root plants. Other agriculure crops area includes horticulture, experimental fields, seed plots. Sown area – seeds includes seeding and planting on feeding root crops, sugar beet and vegetables, seeds of fodders lasting more years.

In **crop production** data on sown area and data on crops production are given for agriculture in total.

Production of agricultural crops represents a total yield of the given crop which was

harvested under standard humidity by Slovak Technical Standards and purity without harvest losses including species of minor quality used for feeding (backgrown grain, small potatoes etc.) excluding seedlings and saplings. Beet harvest is given without reduction for impurities. The crop of feed-stuffs is recalculated to the value of hay according to conversion coefficients. Vegetable production is represented by the total crop of vegetables also from repeated areas including forced early sorts.

Harvested areas of particular sorts of vegetables include also areas where vegetable has been sown or planted as a main crop as well as all resowings and reseedings including covered areas and domestic garden plot (since 2001 without domestic garden plot).

The number of fruit trees includes all fruit trees regardless of age and shape namely bearing trees, newly planted ones or superannuated, non-bearing ones.

The surveying on balance of cereals covers only the agricultural enterprises growing cereals. The increase of cereals includes own crop, purchase, imports and another receipts. The consumption of own seeds, sales of perquisites to their own members and employees, sales to the trading and processing organizations, exports, fodder consumption and others are included in decrease.

Consumption of fertilisers is surveyed without private plot owners for the economic period, i. e., from July 1, of the current year until June 30, of the following year.

In the **animal production** cows, sows and ewes are the breeding ones that at least once farrowed (without sows excluded from breeding and included in feeding). Poultry involve hens, cocks, goose, ducks, drakes, turkey-hens, turkeys including young ones of these species.

Meat production includes the total volume of sales (by primary producers) of slaughtered cattle, calves, pigs, sheep and goats in live weight delivered to slaughter increased by other sales and self-sufficiency. Besides total sales, milk production includes self-sufficiency and also milk that has been sucked or fed by calves. Production of sheep milk covers only milked sheep milk from incorporated agricultural enterprises and from selected self-employed farmers.

Fishing includes freshwater fish determined for consumption and market purposes.

Sales data cover sales of incorporated agricultural enterprises and selected self-employed farmers with reporting duty. Data on sales of all products are surveyed for a calendar year. Sales of cow milk include also the sales of cream. Sales of consumer eggs include all hen eggs without eggs for hatching.

The level of agriculture production is given up to 2000 per average area of agricultural land (by Year-book about soil fund) and mid-year population in the current year. For year 2001 is given per area from agriculture census and for 2002 and 2003 from register of crop areas. Livestock up to 2000 is given per agricultural or arable land, respectively, as of December 31 of the current year (by Year-book about soil fund). For year 2001 is given per area from agriculture census and for 2002 and 2003 from register of crop areas.

Oil plants group includes all oil plants except for flax and hemp seed. Group of total slaughtered animals includes the production of slaughtered cattle, calves, pigs, sheep, goats and horses.

Numbers of **machines and means of mechanization** are surveyed for all agricultural enterprises and organizations providing services to farmers without non-incorporated self-employed farmers. Recalculation of machines and means of mechanization per utilized area is given for the area of all agricultural enterprises. Cereals, potato and beet harvesters are calculated per harvested area and potato planter per sown area.

Definitions

Utilized agricultural land is the sum of independent kinds of lands, which were really exploited in growing season in agricultural production, for crop production. There are excluded non utilized and abandoned areas, which in previous period was agricultural used, but from social, economic, eventually other reasons there are not working already and which not used in system of crops rotation, but without heavy expenses it would be their possible again cultivated.

Arable land is created by lands for growing cereals, root-crops, industrial crops, vegetables and another agricultural crops according to the specified sown methods. There are included lands temporary overgrown with grass or used for growing of fodder lasting more years as well as hotbeds and hothouses if they are built up on arable land. Fallow land is arable land withdrawing from rotation of crops and leave for regeneration on one growing season, during which time they were not seed another crops or just crops for green manure, eventually is on its spontaneus vegetation, which would possible used or plough under.

Gross agricultural production is the sum of sales out of enterprise, sales within the enterprise and changes in stocks at the beginning and at the end of the year (Gross Turnover

Method). It is calculated at natural units (pieces) and at constant prices of the year 2000 or at current prices.

Area sown refers to a spring productive area (i. e., arable land area, sowing area in orchards and gardens including home gardens and the area of grass lands and pasture lands temporarily ploughed for reclaiming), expected to bear a crop in the current year. The following kinds of areas belong here:

a) areas of winter wheat sown in autumn of the previous year and preserved until the spring sowing in the current year
b) areas of spring corn sown in spring of current year
c) areas of many years lasting crops sown in past years and preserved until the completion of sowing in the current year
d) areas that were not sown due to unfavourable climatic conditions as well as idle land (up to 2000 inclusive areas temporarily fallow).

Hectare yield refers to average yield from 1 hectare and it is calculated as a ratio of total yield of given crop and area on which the crop was gathered.

The average annual milk yield expresses the volume of milked and sucked milk per one cow. It is calculated for average number of cows per year excluding meat breed cows (without market milk production).

An average egg-laying per one hen expresses the number of totally annual laid eggs recalculated per one hen.

Rearing of calves, pigs and lambs expresses the difference between live-birth and dead young (including all confiscation). Rearing of calves and pigs is calculated for an average number of cows or sows, rearing of lambs for the number of ewes as of January 1 of the current year.

Loss-rate of calves and lambs is counted until the age of 3-months and of pigs until weaning.

Livestock unit is the weight of 500 kilograms for which individual farming animal species and their categories are recalculated.

Regular employees are those, whose job in an agricultural enterprise is a single or a major activity and who have a labour contract (contract on labour conditions). Here also belong those crop production workers with whom a contract was made for a minimum of 150 working

days in a calendar year. The days actually worked out and days considered to be as work days are being included in those 150 working days.

Economic account for agriculture is the basic methodological instrument for performance rating on agriculture sector, resp. on agriculture basic industry within national economy. Their basic components are this aggregate:

output of the agriculture industry, which present the sum of agriculture products and agriculture services, produced by related units of that branches plus additional inseparable activities,

intermediate consumption measured the value of own products, goods and services consumed in production process and served as main indicator of production intensity of agriculture industry,

gross value added, which shows final effect of agriculture branch, is calculated by a subtraction of intermediate consumption from production of agriculture branch,

net value added which presents value, created by all agriculture units after deduction of fixed capital consumption.

Source

Published data are results of the Statistical Office of the SR processing except data on apiculture taken from the Ministry of Agriculture of the SR, from the Slovak Association of Apiarists and Society of Apiarists of Slovakia. Data on the consumption of fertilisers were taken from the Central Control and Testing Agricultural Institute. Economic accounts for agriculture is elaborated at a cooperation with the Ministry of Agriculture of the SR.

Further information can be obtained from publications Animal Production and Sales of Farming from Primary Production; Selected Economic Indicators and Employees in Agriculture; Census of Area Sown with Crops as of May 20, of Current Year; Final Data on Crops; Final Data on Harvest of Fruit and Vegetables; Register of Farm Animals, Machines and Equipment in Agriculture as of December, 31; Gross Turnover – Selected Indicators on Agriculture; Structure of Employees in Agriculture and Economic Account for Agriculture.

Data on yields of agricultural crop, vegetables, fruit, animal production and livestock, machines and equipment in agriculture for 2001 are published in publication Farm Structure Census.

V.2 Forestry

Methodological notes

The branch of **forestry** includes basic data on structure of utilized forest land, basic data on work in silviculture activities, on regeneration and protection of forests, basic data on logging activities and timber deliveries. The data are given for state forest enterprises, military forests enterprises, forests of industrial and farming companies, municipal forests and organizations covering private forests as well as land associations (land-registers, composesorates, cottar forests and other) including entities non-incorporated in the Business or the Tradesmen Register.

Definitions

Timber land covers all tree species lands serving for the fulfilment of forest functions and the lands on which the forest stands were temporarily removed with aim of their regeneration or establishment of forest nurseries or forest seed plantation.

Commercial forests are those, whose main purpose is a production of quality timber while ensuring other roles of the forest.

Protective forests include forest stands with prevailing protective functions. The aim of economy is to guard permanent filling of relevant ecological functions.

Forests of special purpose are those having functions resulting from specific important social needs by which is conducted the way of management.

Land designed for afforestation comprises the whole area designed for afforestation including land taken over to be afforested (former non-forest – mainly agricultural – land). Unsuccessful afforestation increment comprises areas of unsuccessful plantations in observed and previous years.

Afforestation stands for land actually afforested by sowing and planting (including established plantations). It comprises areas afforested for the first time as well as enrichment planting recalculated per area of full afforestation.

Production of plants includes the number of plants taken from forest tree nurseries for afforestation and sale purposes in observed year.

Forest tree nursery is the land designed for the production of planting stock.

Cleaning is usually the first silviculture intervention in young immature stands.

Thinning includes mainly regulations of stand composition, shape tending and stand stabilisation.

Logging includes logged mass of wood in thousand cubic metres i.b. that was received as a final assortment or as a green trunk including logged mass from so called “self-production”. The mass is included regardless of type of silviculture or logging interventions it was received from, including salvage felling.

Self-production stands for volume of harvested timber left to the subject who felled it for a fee to cover self-supplying of inhabitants with fuel wood.

Timber deliveries comprise mass of wood (full-size timber, non full-size timber) in thousand cubic meters i. b. designed for a sale to domestic and foreign customers and delivered for own consumption regardless of delivery place.

Source

Published data of selected indicators in forestry are completed from the materials of the Institute of Forest Management in Zvolen.

More information on forest management can be obtained from the Institute of Forest Management in Zvolen as well the Forestry Research Institute Zvolen and from annual publication Forest Management in Slovak Republic.

V.3 Industry

Methodological notes

Industry includes activities connected with extraction of minerals, manufacturing, production and distribution of electricity, gas and water. It is divided according to the Branch Classification of Economic Activities, ownership, size category by number of employees and by the Main Industrial Groupings.

Industrial production index (IPI) is calculated according to the methodology valid in the European Union on the base of the Standard on Short-term Indicators. IPI calculation is based on the change of selected products volume and on the two-step weight system. The index expresses a change in industrial production in current year in comparison with base year. It is calculated from statistical survey results in reporting units (enterprises) with the main industrial activity and with 20 and more employees regardless of legal form and in the selected enterprises with non-industrial main activity or with number of employees up to 19.

Production of selected industrial commodities is given in the aggregation of products according to the list of industrial products PRODSLOV, which is elaborated on the base of international classification of products PRODCOM.

Turnover are given without value added tax and excise tax.

Data on financial indicators are presented in the chapter II.2 Finance.

Definitions

Turnover include the receipts of goods, receipts from sales for services and receipts of commodity.

Receipts from sales for export include the sale to a foreign customer that is realized by the manufacturing enterprise or by an intermediary organization. The sold products are transported directly from the store of the manufacturing enterprise abroad.

Industrial production index expresses the change of production volume given in physical terms.

Production of selected industrial commodities includes the products intended for sale

outside the enterprise as well as those consumed for manufacturing purposes (i. e. intra-plant consumption) and for industrial services (i. e. adaptations, repairs, maintenance, installation, contract treatment) and they are intended for outside sale.

Monthly labour productivity based on turnover is expressed by volume of the turnover per one employee in industry per month.

Source

All published data are the result of the processing in the Statistical Office of the SR.

More detailed information can be obtained in monthly publications Selected Indicators of Industrial Organizations and Industrial Production Index, in publications Results of Quarterly Surveys in Industry SR and Production of Selected Goods, Results of Annual Surveys on Industry of the SR, Production and Sales of Selected Goods by Enterprises and Establishments, in Yearbook of Industry and on the internet web-site www.statistics.sk.

V.4 Energetics

Methodological notes

In the statistics of **energy** for 2001– 2002 it has been to methodological changes, which ensure covering of requests of domestic users from area of general government, private sector and also data according to norms and requests of the European Union and International Energetic Agency. Concerning to mentioned fact has changed content of whole subchapter Energy in the Statistical Yearbook of the Slovak Republic.

Data on energy sources have been taken from the producers, importers, exporters and fuel and energy traders. Data on use are obtained from statistical units consuming individual kinds of fuel and energy, from distributors and with inputations.

Balance of solid fuel includes hard coal, brown coal, coke, briquettes.

Balance of gaseous fuels includes natural gas, coke-oven gas, blast furnace gas, furnace gas.

Balance of crude oil and petroleum product includes crude oil, NGL, refinery feedstock, refinery gas, ethane, LPG, gasolines, diesel oil, fuel oils, lubricants, waxes, bitumenes, petroleum coke, other refinery products.

Balance of combustible renewables of fuels and wastes includes wood, wood waste, other biomass, municipal solid wastes, biogas, industrial wastes (solid, liquid and gaseous). Hydroenergy is involved in electricity balance and geothermal heat in heat balance.

Definitions

Gross inland consumption includes primary production (brown coal, lignite, crude oil, natural gas, heat and electricity) and it is modified by recovered products, by balance of imports and exports and by drawing of stocks. They also include the balance of imports and exports and drawing of the other resources stocks such as hard coal, coke, brown-coal briquettes, oils, petrol, light and heavy fuel oils, kerosene, coke-oven gas, blast furnace gas and other solid, liquid and gaseous fuels.

Transformation – input amount of fuels transformed to obtain derived fuels or electricity and a part of fuels consumed for heat production. The total amount of fuels used in public power, CHP and heat plants is reported. Autoproducer's fuel consumption for electricity production is reported. There is also included a part of fuels which corresponds to heat sold from autoproducer's CHP and heat plants production. Fuels which were used for autoproducer's heat production for own consumption is reported in energy sector or other sectors which covers autoproducer's main activity.

Transformation – output amount of produced fuels and energy obtained by upgrading of other fuels and energy. Individual items of output meet items of transformation – input.

Exchanges and transfers, backflows amount of products which were reclassified to feedstocks or to other products and amount of products returned from petrochemical industry for further processing.

Consumption of the energy sector fuels used by the energy industry to support the mining (mining coal, oil and gas production) or transformation activity.

Distribution and transmission losses figure a difference between fuels and energy input into the long-distance transport systems (pipelines, gas-lines and public electricity and heat distribution) and output from them (intra-plant losses being a part of consumption are excluded). Well-founded losses caused by depreciation or destruction are included.

Final consumption is calculated like: gross inland consumption
– transformation – input
+ transformation – output
+ exchanges and transfers, backflows
– consumption of the energy sector
– distribution and transmission losses

Final non-energy consumption is energy products used as raw materials in the different sectors; i.e. is not consumed as a fuel or transformed into another fuel.

Final energy consumption is final consumption minus final non-energy consumption. See also transformation – input.

Consumption of fuels and energy is consumption including charging and operational consumption in the process of generation of electricity and production of heat as well as in the fuel improvement processes. Electricity consumption also includes consumption of energy for pumping of water in hydro-electric power plants.

Source

All published data are the result of the Statistical Office of the SR processing. More information can be found in annual publication Energetics.

V.5 Construction

Methodological notes

The production of the **construction branch** covers construction works realized on the territory of the Slovak Republic and abroad by supplier construction enterprises with the major activity in the field of building and construction registered in the Slovak Republic (including tradesmen) and by construction establishments of non-construction enterprises. Predominating building and construction activity of the enterprise is determined by its registered appurtenance to section 45 of Branch Classification of Economic Activities (NACE).

Data on contractually agreed inland construction production in new construction, reconstructions and modernisations are structured into particular branches of construction types by the Classification of Types of Constructions (CC). Data on construction production carried out by own employees by the Classification of Products by Activity (CPA) are divided by individual kind of construction activities.

Data are presented in methodology and organization structure of the current year, at current prices and constant prices converted on the average of 2000.

Definitions

Construction production carried out by own employees comprises the value of construction production realized by employees included in the registered number of employees of the given construction enterprise as well as by persons working with the enterprise upon contract (including productive work of apprentices). Included is also the production within own capital construction as well as production for other suppliers of construction production including production produced abroad.

Contractually agreed construction production is the value of construction production based on a delivery contract for a customer. It is the sum of own performances from construction activity including the production carried out by sub-contractors.

Construction production in **new construction, modernizations and reconstructions** is

the value of construction inland production connected with acquisition of the new tangible fixed assets and with rebuilding, extension or reconstruction of the existing ones.

Maintenance and repairs are the value of works realized on existing buildings or construction parts of tangible fixed assets removing partial depreciation or damage by repairs to make them functional.

Other construction production comprises all production that cannot be included in new construction, reconstructions, modernizations and repairs. It includes, for example, construction work for geological survey, removing of mined earth carried out by contractors and demolition work (in the site where another construction will not be erected instead), etc.

Completed dwellings by construction technology represents the number of dwellings built by suppliers in the new buildings for habitation classified by used material of vertical load-bearing construction. Completed dwellings in family houses realized “on key” (fully completed dwelling construction) are also included in this number.

Workers carrying out construction work comprise employees (workers) from the average registered number of employees included in groups 7, 8, 9 of the Classification of Occupations who are involved fully or mainly in construction activities of the enterprise.

Average monthly wage is calculated from the total wages (without other personnel costs).

Labour productivity is expressed as the amount of the construction production per one employee or worker engaged in construction work.

Source

All published data are the result of the processing in the Statistical Office of the SR.

More information can be obtained in monthly publication Construction Production, Employees and Wages in Construction Enterprises, in quarterly publication Stock of Orders and Financial Indicators of Construction Enterprises and in Yearbook of Construction.

V.6 Transport, Posts and Telecommunications

Methodological notes

The branch of transport, posts and telecommunications includes entrepreneurial subjects providing services in the fields of public and non-public transport, posts and telecommunications.

Public transport includes enterprises with transport as prevailing activity carrying out the inland or international transport of goods and passengers including supporting and auxiliary activities in the transport for external needs (excluding travel agencies).

Data on public transport are for all incorporated transport enterprises and tradesmen enrolled in Tradesmen Register.

Road transport of goods includes transport of goods by all freight means of transport registered in Register of vehicles in the Slovak Republic, realizing for hire or reward and own account. Transport activity for own account includes the transport of goods for own production. Transport activity for hire or reward account is paid transport service according to the legal relationship based on the agreement between transport operator and natural or legal persons whom the transport of goods, another things will be realized for.

Transport of goods given in tons and performances given in ton-kilometres are surveyed according to the Classification of Goods in Transport NST/R which contains 24 commodity groups.

Roads and motorways are divided for roads I., II. and III. class and motorways.

Local communications include data for local roads for class I. to IV. and they are surveyed once within five years.

City transport is ensured by the branches of the city transport companies in Bratislava, Košice, Prešov and Žilina. In other towns of the Slovak Republic the city transport is carried out by companies of the road passenger transport.

Air transport is presented for all enterprises performing air transport regardless their prevailing activity given in the Business Register.

The branch of **posts and telecommunications** includes incorporated enterprises that provide postal service, financial service and operation of the telephone, radiotelephone,

telegraph, telex and documentation service. Data are presented for state post, courier activity, telecommunication services in fixed and mobile telephone network, technical equipment within telecommunication and radiocommunication service.

The sectional survey about **information and communication technology** includes all incorporated enterprises with 20 and more employees without regard to prevailing activity. Information and communication technology data in households for 2002 are surveyed within the Microcenzus of the households realized in 2003.

Definitions

Turnover at current prices without VAT are receipts for own products, receipts from sale of services and receipts for goods.

Receipts for freight and passenger transport without VAT at current prices express revenues for provided services in transport for enterprises and tradesmen with transport as main activity.

Roads and motorways are connected line structure serving for transport connection between residence units and centres of inland or international value. Cross-roads, resting places, bridges and tunnels are included.

Local communications include all accessible and used streets, roads and public places excluded from roads and motorways network lying in built-up municipal areas or in areas intended to be built-up.

Other land transport includes road transport, taxi and the city transport.

Transport of goods expresses real mass of transported goods (load) realized by means of particular kind of transport by the transit line. They are surveyed according to the commodity groups.

Performances in ton-kilometres present value of total transported performances in ton-kilometres carried out by freight transport means of particular kind of transport. They are calculated (tons x kilometres) for every journey individually.

Net ton-kilometres in railway transport express a net transport performances of locomotives by actually covered distance.

Gross ton-kilometres of traction in railway transport represent product of gross weight of train and train-kilometres in goods resp. passengers transport.

Loading expresses a mass of loaded goods intended for inland transport or exports. Loading as activity is the beginning of transport process realized by the agreement.

Average static load in railway transport is a ratio of loading in tons and number of loaded train units.

Transported passengers present the total number of transported persons in inland or international transport.

Passenger-kilometres express the value of transport performances in passenger transport. One passenger-kilometre is equal to transport of one person per 1 kilometre distance.

Seat-kilometres express carriage capacity of city transport. This indicator is a product of vehicle driven kilometres and static vehicle capacity rate for every drive individually.

Post office is the independent postal establishment on determined place carrying out receiving and delivery service. Some post offices also provide clearing service.

Dispatched letter items are all kinds of items containing paper documents or tiny objects sent by post offices or by mail boxes.

Deposits of financial services include deposits sent by post cheques (cash or direct), international cheques, deposits for the Post Bank, telecommunication remittances, coupons and others.

Withdrawals of financial services express the number of paid inland and international post cheques, withdrawals for the Post Bank, withdrawals of pensions as well lottery prises.

Main telephone lines are subscriber lines as a set of technical facilities for the public telephone services access network in both fixed network and exchange termination of the relevant service nodes.

Mobile telephones are lines of public radiotelephone network (NMT – Nordic Mobile Telephone, GSM – Global System of Mobile Communication), which call number is registered in the organizations which operate public radiotelephone network NMT, GSM.

Digital exchanges are devices with electronic structural members, digital changing of signals and automatic controlled connecting processes.

Internet is a complex computer network enabling communication between the public and private networks on different types of communication media and different technical platforms.

Intranet is internal company communications network using Internet protocol allowing communications within an organisations.

E-mail is electronic transmission of messages, including text and attachments, from one computer to another located within or outside of the organisation.

Web-side is location on the World Wide Web identified by a Web address.

Source

All published data are the result of the statistical surveys of the Statistical Office of the SR, except data on the length of roads, number of motor vehicles and performance data on posts and telecommunications, which are taken from the Ministry of Transport, Posts and Telecommunications of the SR and from the Ministry of Interior of the SR.

More information can be obtained in quarterly publication Results of Quarterly Surveys for Enterprises of Transport, Posts and Telecommunications and in Yearbook of Transport, Posts and Telecommunications and in publication Information and communication technology in enterprises and households.

V.7 Internal Trade, Hotels and Restaurants

Methodological notes

The branch of **internal trade** includes entrepreneurial subjects with the following prevailing activity:

- Sale, maintenance and repair of motor vehicles and motorcycles; Retail sale of automotive fuels,
- Wholesale trade and sales on a fee or contract basis except of motor vehicles,
- Retail trade, except of motor vehicles and motorcycles; Repair of personal and household goods.

Sale, maintenance and repair of motor vehicles and motorcycles includes all activities (except manufacture and renting) related to motor vehicles and motorcycles, including lorries and trucks. This division also includes retail sale of automotive fuel and lubricating or cooling products.

Wholesale trade and sales on a fee or contract basis except of motor vehicles and morocycles includes sale of new and used goods to next sale or processing or eventually wholesale on a fee or contract basis for commission. This division also includes usual manipulations involved in wholesale such as assembling, sorting and grading of goods according to quality and largeness in large lots, repacking, bottling, redistribution in smaller lots, storage, refrigeration, etc.

Retail trade, except of motor vehicles and motorcycles includes sale of new and used goods, eventually own products to final consumers for personal or household consumption or utilization, realized mainly in units of retail network (i.e. shops, stands, department stores, petrol stations), and as consignment sale, hawkers etc. Retail trade includes also other supplementary services, e.g. transport of purchased consumer goods, repairs of consumer goods and their installation.

Hotels and restaurants comprises the provision of short-stay accommodation in the hotels type facilities, guest-houses, catering (nutrition, refreshment, eventually social and funny activity) and other specific nutrition.

Detailed classification all above mentioned activities is based on the Statistical Classification of Economic Activities.

Data on internal trade and on hotels and restaurants are surveyed for incorporated legal persons and for natural persons running business on the base of the Tradesmen Licence or another licence.

Data on retail network and on network of outlet centres of catering are surveyed for incorporated legal persons with 20 and more employees.

Definitions

Retail network consists of shops in which retail activity is carried out. Units of retail network are classified into assortment types by receipts in particular assortment.

Foodstuff shops are those in which the share of foodstuffs in the total turnover is 80 % and more. Non-foodstuff shops sell a general assortment of non-foodstuff goods. General shops sell mainly foodstuffs; from industrial ware mainly that which is often demanded. Department stores are units with a locally concentrated set of selling departments under joint operation. Minimal selling area is set up (e. g., for full-assortment department store it is 1,500 m^2). Immobile stands are places of business with a separate place for goods and shop-assistant but not for customers. Petrol stations and garages have no selling area too. Units for sales of fuels and construction materials don't report their selling area if they have no sales room and they sell directly on storage area.

Receipts in manufacturing units of retail trade are presented in sale prices for year (including value added tax).

The network of outlet centres of catering consists of centres of catering providing catering services, social and entertaining activities as well as supplementary catering services. According to the period of operation the outlet centres are divided into year-round and seasonal ones. A seasonal unit operates less than 9 months during the year.

Receipts of outlet centres of catering are presented in sale prices for year (including value added tax).

Source

All published data are the result of the processing in the Statistical Office of the SR.

More information can be obtained in quarterly publication Domestic Trade, Catering and Accommodation in the SR.

Methodological notes

Foreign trade includes activities of all entrepreneurial entities, legal and natural persons involved in exports and imports in the form of merchandise. That foreign-trade activity was regulated by the Act No 180/1996 Code of Acts – the so called Customs Act and by the Decree of the Ministry of Finance of the Slovak Republic No 167/1997 Code of Acts on contents, form, requirements of customs declaration and on way of keeping customs statistics. Since July 1, 2001 foreign-trade activity is regulated by the Act No 238/2001 Code of Acts (Custom Act) and by the Decree of the Ministry of Finance of the Slovak Republic No 251/2001 Code of Acts, laying down certain provisions of the Custom Act.

Customs statistics includes information on goods which were imported into the Slovak Republic or stored in the customs warehouse or in free zone and thereafter released into free circulation regime or into regime with economic impact i.e. into the regime of the inward processing in the drawback system or suspension system, into the temporary use regime and into the regime of processing under customs control. In case of exports all goods exported from the Slovak Republic for the purpose of permanent keeping or processing abroad, as well as goods stored in customs warehouse or in free zone, are included.

Concerning imports, the processed information relates to the goods after their release into the proposed regime, usually by inland customs office.

A decisive moment for statistical processing of the data on exported goods is confirmation that the goods crossed the border by border customs office.

Data are collected and processed by Combined Nomenclature, which is given by Customs Tariff. The nomenclature is fully compatible with the nomenclature used by the European Union. Data are also published according to the Standard International Trade Classification, Revision 3, (SITC, Rev. 3), issued by the Statistical Commission of the United Nations in 1996.

In compliance with international methodology of foreign trade data reporting, the data are published exclusively **by country of origin and country of destination**. Values of imported and exported goods are compiled as **FOB-type values.**

Data are given according to the countries (Commission Regulation (ES) No 1779/2002) in accordance with decree of SO SR No 196/2003 on Geonomenclature of countries and territories for foreign trade statistics. Therefore data for 1999 and 2002 are not identical with data published in yearbook 2003.

Export and import figures are the results of the final statistical processing of foreign trade data for the reference period in the methodology applicable in the year 2003. With entrance of the Slovak Republic into European Union come the radical change in the methodology of data on foreign trade acquisition.

Definitions

Country of origin is the country, where goods were completely produced or obtained, or where goods were substantially transformed.

Country of destination is the country, where goods will be used, consumed or processed, or it is the last known country, where goods will be transported.

FOB-type value are included the transaction value of goods and the values of services (e.g. transport, insurance, transfer, storing of the goods etc.) performed to deliver goods to the border of the exporting country.

Economical associations consist of the next countries:

CEFTA (Central European Free Trade Agreement): Bulgaria, Czech Republic, Hungary, Poland, Slovakia, Slovenia, Romania;

EU (European Union): Belgium, Denmark, Finland, France, Greece, Netherlands, Ireland, Luxembourg, Germany, Portugal, Austria, United Kingdom, Spain, Sweden, Italy;

EFTA (European Free Trade Association): Iceland, Liechtenstein, Norway, Switzerland;

OECD (Organization for Economic Co-operation and Development): EU and EFTA member countries, Australia, Czech Republic, Japan, Canada, Republic of Korea, Hungary, Mexico, New Zealand, Poland, Slovakia, United States, Turkey.

Source

Collection of the data on the goods, to which were ensured customs-approved treatment on the basis of necessary documents, their checking and registration in accordance with the legal regulation mentioned above are done by custom bodies. The Custom Directorate of the Slovak Republic supplies the data to the Statistical Office of the Slovak Republic, which is responsible for foreign trade data processing and publishing.

More detailed information on foreign trade can be obtained in monthly publication Foreign Trade of the Slovak Republic and in the Yearbook of Foreign Trade of the Slovak Republic.

V.9 Real Estate, Renting, Business Activities and other Services

Methodological notes

Area of **real estate, renting, business activities and other services** covers those entrepreneurial entities that provide paid services to enterprises and the population mainly in the field of real property, renting of machines and devices, computer and related services, other business services (such as legal, tax and account consultancy, architectural design and engineering, technical testing and analyses, advertising, labour recruitment, searching and safeguarding services, waste treatment and other various business services), education, waste disposal, recreation, cultural and sport activities and other public and personal services (such as laundry and dry-cleaning, hairstyling and cosmetic care, funeral services, body relaxation activities and other services prevailingly of personal character).

Data on real estate, renting, business activities and other services includes data for legal persons and data for natural persons.

Turnover for real estate, renting, business activities and other services are surveyed without VAT and are divided according to the Statistical Branch Classification of Economic Activities. The number of enterprises includes only legal persons.

Definitions

Turnover for real estate, renting, business activities and other services express the value of receipts from selling of goods, own products and services realised in the reference period and specified for inland and foreign customers. The indicator includes receipts of enterprise from its all enterpreneurial activities.

V.10 Tourism

Methodological notes

The activities of accommodation facilities, tourism and foreign tourism are surveyed within the framework of **tourism**.

Foreign visitors accommodated in the tourism facilities are surveyed by the country of residence.

Data on accommodation and tourist services have been obtained from statistical units entered in the Business Register and from natural persons entered in the Tradesmen Register.

Names of the countries are used according to the ISO standard No 3166.

Definitions

Accommodation facilities of tourism are those which provide temporary accommodation for visitors regularly or occasionally. They include hotels, boatels, motels, inns with accommodation services, tourist hostels, chalet camps, camping sites, other collective accommodations and accommodation in private. Only complete cottage colonies and camping sites are considered as accommodation facility but individual chalets, cabins or tents of provider are not.

Beds in accommodation facilities of tourism include all beds determined for overnight lodging of visitors including occasional beds. The beds intended for the owner and for stuff of accommodation facility are excluded.

Places on free area are basic camp units for tents, tent and passenger car, caravan, motor caravan multiplied by 4. Four people can be accommodated per one camp unit.

A visitor in accommodation facility of tourism is a person (except stuff and owner) using services of temporary accommodation facility regardless of country of permanent residence. Children are also included in the number of visitors. The visitor uses accommodation services for the reason of holiday, business trip, participation in sport events, training, courses, symposium, stay in spa and convalescent centres, visit of friends or relatives, participation in

church events, etc.. There is also included accommodation of children in out-door schooling and in summer and winter holiday camps for children. Domestic and foreign employees working in Slovakia who use the accommodation facility temporally as a hostel are not considered to be visitors. The period of temporary accommodation should not exceed 1 year.

Receipts for accommodation services include the receipts with value added tax obtained from overnight stays of visitors (domestic and foreign), receipts from setting of the tent, motor vehicle or caravan, connecting to electric network, etc., (regardless of the way of the payments for accommodation). Receipts from services relating to accommodation (e. g. washing and cleaning of laundry, using of bathroom, etc.) are also included. Receipts from services of personal character e. g. cosmetics, hairdresser's, manicure and chiropody services are excluded.

Foreign visitor accommodated in an accommodation facility is a person who visits the country and is not the resident of the country. Children are also included in the number of visitors. Foreign visitor uses accommodation services for the reason of holiday, business trip, participation in sport events, training, courses, symposium, stay in spa and convalescent centres, visit of friends or relatives, participation in church events, etc. Exceptions are those people who are coming to do a job, to prepare themselves for a profession (a long-term study) or to become a resident of the country. Members of diplomatic corps and armed forces being on duty in the country are also excluded.

Participant in the active tourism is foreign visitor using services of tourism during travelling in the Slovak Republic and he is not the resident of the Slovak Republic.

Participant in the passive tourism is the Slovak citizen using services of tourism during travelling abroad.

Participant in the active or passive foreign tourism is a person travelling for the reason of holiday, business trip, participation in sport events, training, courses, symposium, stay in spa and convalescent centres, visit of friends or relatives, participation in church events, etc. Exceptions are those people who are coming to do a job, to prepare themselves for a profession (a long-term study) or to become a resident of the country. Members of diplomatic corps and armed forces being on duty in the country are also excluded. Duration of a temporary stay of participant in the active or passive foreign tourism must not be longer than 1 year.

Arrivals of foreign visitors into the SR include numbers of all arrivals of foreign visitors who entered the Slovak Republic for any reason.

Travels abroad of the Slovak citizens include numbers of all travels abroad of the Slovak citizens for any reason.

Source

All published data are the result of the processing in the Statistical Office of the SR excluding data on arrivals of foreign visitors to Slovakia and on travel abroad of Slovak citizens by the sections of borders and airports which are processed from the statistical information received from the border crossing points and airports of the Slovak Republic and granted by the Department of Border and Alien Police of the Presidium of Police of the SR.

More information can be obtained from quarterly publications Basic Indicators of Tourism of the SR for Accommodation Facilities; Foreign Tourism and in annual publication Organized Tourism of the SR.

VI.1 Income, Expenditure and Consumption of Households

Methodological notes

The Statistical Office of the SR realized in 2003 two surveys about income of households.

1. statistics of household budget surveys – regular surveys of income and expenditure of private households. It is a sample survey where a purpose-made quota selection is used in order to create the sample. Quota criteria are the following:

- region (8 groups);
- social group of households which is assigned by the social status of the head of household (5 groups);
- net money income per capita and month (2 groups);
- number of dependent children in the households where the head is an economically active person (4 groups), number of members in pensioner's households (2 groups) and sex in one-member pensioner's households.

Frequency of individual groups of households by the first two criteria was fixed on the basis of the Census results 1991. Frequency by the last two characteristics was fixed according to the results of sample survey on money income of households (Microcensus 1997). In 2003 reporting network was created by 1 645 individual households.

Reporting unit according to the family budget surveys is private together managing household, i.e. group of people who permanently occupy together one dwelling and reimburse together the household expenditure (food, current necessary household expenditure, maintenance of the dwelling, etc.). Member of household can also be a person who is not relative with other members of household but he permanently shares one dwelling and all household expenditures with them. Household willingly supplies information about all its income and expenditure of all of households members. Survey not included a collective households as cloisters, prisons, boarding houses, retirements homes, hospitals, etc.

Consumption expenditure are given by the Classification of Individual Consumption by Purpose Use for needs on household budget.

Gross and net money income and expenditure on private households in total are estimates for average household recalculated from the values covering households of employees, i.e.

persons having the status of an employee (except for agriculture), farmers (manual working members of farming co-operatives including self-employed farmers), households of pensioners without an economically active member while one of the household members can work one month per year at most as well as self-employers (except for agriculture) by using the weighted arithmetical mean.

2. Microcensus 2003 – sample survey about income of households for 2002. The selection of reporting households was realized on the basis these criteria:

– households was chosen from sample support created from data base of Population and Housing Census 2001;
– sample of households had to guarantee the representativeness of output processeed tables.

Residential dwelling was the unit of the selection. All persons, who lived in dwelling as of December 31, 2002 including persons temporarily absent, were the units of the survey.

Data about income of households is recalculated on average per one member of the households.

Data on **consumption of food and alcoholic beverages per capita** are calculated by using the balance method. Consumption is computed per mid-year population. Main data inputs used for the calculation are data on domestic production, imports, exports, initial and final stocks. Calculation of individual data on consumption of food is based on statistical information of the Statistical Office of the SR and the Ministry of Agriculture of the SR as well as information from some food industry unions.

Daily consumption of energy and the most important nutritive ration per 1 capita are calculated on the base of food consumption data, which were calculated by balance method after excluding consumption in food industry for further processing and from the nutritive values of food given in the tables. The result is expressed in gross terms, i.e. including losses (as purchased).

Meat and meat products consumption is given in terms of carcass weight including entrails and consists of beef, pork, veal, poultry, mutton, horse, goat, rabbit and venison meat.

Fats total are expressed in terms of net fat.

Vegetable, vegetable products, fruits and fruits products are expressed in terms of fresh product.

Definition

Gross money income of private households (household budget survey) represents the total sum of money received by any member of a household. It is the sum of the money income from employment (from wages and compensations for work activity in non-agricultural and agricultural branches from employer, resp. co-operative), financial amounts assigned by self-employer from his/her business income for the needs of the household, social income, financial givings, compensations from insurance companies, gains from lotteries, withdrawals of loans and the like. Gross money income data do not include withdrawals of own savings.

Income from the property of private households (household budget survey) is created by the financial amounts from bond, shares and coupon dividends, from sales of farming products, from real-estate lease, etc.

Net money income of private households (household budget survey) consists of:

- net earnings, i.e. income from employment without income tax and compulsory contributions to the Social Insurance Agency, health insurance companies and to the National Labour Office;
- part of income from private business running used by an entrepreneur for household providing;
- social income, i. e. old-age pension security benefits, sickness insurance benefits, state social benefits, social aid benefits and unemployment allowance;
- other income, i. e. income from property, income from institutions and income from private persons, income from sales of farming products and income from abroad and withdrawn new loans.

Gross money expenditure of private households is the sum of financial amounts spent on purchase of goods and services including all types of insurance (consumption expenditure) and of transfer of all payments (other expenditure) including income tax and loans payments. The consumption expenditure does not contain under the item “miscellaneous goods and services” expenditure of households on compulsory personal insurance, i. e. contributions of health and sickness insurance and old-age pension security and contributions of insurance in unemployment (they are involved in the item “other expenditure”) and the item “other expenditure” does not include the savings (they are surveyed in the individual item “deposits”).

Net money expenditure of private households is recalculated as the sum of expenditure

on consumer goods and services and other net expenditure. Income tax, compulsory contributions to Social Insurance Agency, health insurance companies and to the National Labour Office are excluded.

Social category household (microcensus) corresponds with social category of person at the head of household, which is derived from the position in occupation, from type of economic activity and from the form of compensation as of December 31, 2002.

Employee is working for wage, salary or other kind of compensation in state enterprise, in private enterprise, in agriculture company or other cooperative organization, in other employer.

Member of production cooperative is a member of production, agricultural or eventually other production associations.

Enterpreneur (partner, tradesman) with employees is a person, who employs other persons – employees within his business activities.

Enterpreneur (partner, tradesman, self-employed farmer, freelance) without employees is a person, who employs no other persons – employees within his business activities.

Others are persons, who are not included into previous groups.

Social activity of household head is defined by its economic activity. Social activity degree at persons economically active is defined according to the employment as of December 31, 2002, at persons on compulsory military service, at military training exercise and at imprisonment suspended performance according to last education.

Pensioners are all persons, whose main source of income was pension as of December 31, 2002.

Education of household head presents the level of completed school education. Elementary education is successful completion of basic school. Secondary vocational education is obtained by graduation of secondary vocational school or secondary specialized school without leaving exam. Full secondary vocational education includes full secondary vocational, full secondary specialized, full secondary general (all with school-leaving exam) and higher specialized education. University education consists of university or bachelor´s graduation.

Complete family constitute married couple with or without children.

Uncomplete family constitute one of the parents (marital status is not determined) at least with one child.

Single is individually managed and lived in separatelly dwelling or as subtenant.

Unprovided child is a person, who not completed compulsory education at the age of 16 years until the end of 2002.

Net annual money income (microcensus) is the sum of earnings, social income and other income.

Earnings (microcensus) represents the sum of net money income from main occupation, secondary activity and from private business. Income from main employment consists of all income, related to main working activity. Income from secondary activitity included net income of working activity in secondary employment, i.e. from working relationship carried out the with the main employment. Money income from private business was income of private entrepreneurs, for who entrepreneuring was the main employment. Only income intended for households werw surveyed. All income was adjusted for income taxes and payments into obligatory insurance funds.

Social income (microcensus) includes all social benefits, social contributions, social aid benefits received from state, municipal or private institutions.

Average pension of old-age pension receivers includes full old-age and partial old-age pension, invalidity pension includes full and partial invalidity pensions and average pension of pension receivers includes orphan´s pension, widow´s, widower´s, widow´s and old-age, concurrency of other pensions and other pensions.

Other income (microcensus) includes income from capital assets, from sales of real estate and other assets, from renting of buildings, dwellings, soil, income of insurance companies, inhabitants income and other income. New loans are not included.

The average consumption of selected kind of food and alcoholic beverages is total amount of the commodity available in the country as human food during given year per capita. The consumption of surveyed kinds of food also involves the consumption in food industry for further processing (meat for production of smoked products, sugar for confectionery production, e. g.).

Source

Family budgets data are the result of the processing realized by the Statistical Office of the SR. More information is available in the publications Structure, Incomes and Expenditures of Private Households and Incomes, Expenditures and Consumption of Private Households.

Basic results of sample survey about households income in the year 2002 are contained in publication Microcensus 2003. The first volume contains data about money income of managed households. The second volume contains data about money income of households according to their type, data about money income of pensioners households and data about expenditures for housing for SR. The third volume contains data about money income of managed households and data about money income of households according to their type in regions.

Food consumption and its nutritive evaluation were processed by the Statistical Office of the SR. Data on nutritive value of consumption were worked out in collaboration with the Research Food Institute in Bratislava. Next information can be found in annual publications Food Consumption.

VI.2 Education

Methodological notes

According to the Act on the System of **Basic and Secondary Schools** No 29/1984 Code (Act on Education) in the wording of later regulation, the system of basic and secondary schools consists of basic school, basic school with kindergarten, vocational school, vocational secondary school, grammar school, specialized secondary school and special schools. **Educational facilities** (Act No 279/1993 on the Educational Facilities in the last wording) as well as **higher education institutions** (Act No 131/2002 Code of Acts on the higher education institutions in the last wording) are also the part of the educational system.

The school years presented in the tables are indicated by the years in which they started, e. g. the year 2003 refers to the school year 2003/2004.

Data on church and private schools are included in the tables related to the individual types of schools and are published separately at the end of the chapter.

Data concerning secondary schools and higher education institutions do not cover the schools of the Ministry of Defence of the SR and Ministry of the Interior of the SR. The figures on higher education include civil students of military universities.

Schools where upbringing and education are carried out in the language of the minority in addition to the Slovak language are reported as the schools with several teaching language which means that in such schools there are classes with the Slovak teaching language and classes with the minority teaching language established.

Internal teachers including school directors are included in the number of teachers except vocational secondary schools where are included only internal teachers.

Shift teaching expresses the share of pupils and classes involved in classes held in the second shift.

Definitions

The education of pupils with special pedagogical and educational requirements is provided **in special schools** if their handicap does not allow their education in other schools according

to Act No 29/1984 Code of Act on the system of basic and secondary schools, as amended. It is performed by special forms and methods with possible use of compensatory aids with the purpose of integrating the pupils into the working process and social life. Special schools are represented by special basic schools, special secondary schools, practical school and vocational secondary schools. For the needs of this statistical yearbook special schools also includes special kindergartens.

The role of **special educational establishments** is to protect the childrens against social-pathological effects, to prevent problematic and delinquent development of children, and to provide institutional and protective education. Special educational establishments are establishments of educational prevention and establishments and establishments of substitutional education. For the needs of this statistical yearbook special educational establishments include re-educative child home, re-educative youth home, therapeutical-educational sanatorium, diagnostic centre for children, diagnostic centre for youth, re-educative home for mothers with children.

Source

Source of data are the sector statistical surveys carried out by the Ministry of Education of the SR. Source of financial data are the statistical surveys carried out by SO SR.

More information are to be found in publications Basic Data on Schools and School Facilities in the SR and Selected Indicators of Non-Market Services or to be obtained from the Institute of Information and Prognoses of Education.

Methodological notes

Data on **health care and health employees** are summarily published for the branches of the Ministry of Health of the SR, the Ministry of Defence of the SR, the Ministry of Interior of the SR, the Ministry of Justice of the SR, The Ministry of Transport, Posts and Telecommunications of the SR, excluding the data in the tables 3.5–8., which are presented in the year 1999 only for the Ministry of Health of the SR.

The group of health facilities – hospitals includes I., II. and III. types hospitals, children hospitals of II. type, psychiatric hospitals, children psychiatric hospitals, hospitals with policlinics of I., II. and III. type, teaching faculty hospitals, teaching faculty hospitals with policlinics and children teaching faculty hospitals with policlinics.

Special therapeutic institutes cover tuberculosis and respiratory diseases sanatoriums, rehabilitation, oncology, cardiology, endocrinology and reumatology institutes, institutes of preventive and clinical medicine, institutes of nourishment, geriatric and chronic illness institutes, institutes in branch of gynaecology and obstetrics, Centre for Treatment of Drug Additions, Centres for Treatment of Drug Additions for Children, Geriatric Centre, special therapeutic institutes for children and children convalescent centres.

National Institute of Tuberculosis and Respiratory Diseases was integrated in the hospitals in the years 1999, since 2000 it is integrated between special therapeutic institutes.

In the year 1999 special therapeutic institutes covered also scientific-research institutions, since 2000 also high-specialised institutes and institutes for treatment.

Institutional health care establishments comprises hospitals (including psychiatrical), special therapeutic institutes (except convalescent centres), high-specialised institutes and institutes for treatment.

Data about employees working in health services classified according Classification of occupations (ISCO).

Infectious diseases data are obtained from the compulsory announcements. There are only newly notified cases presented. Newly notified cases of tuberculosis are surveyed including relapses.

Average number of persons covered by sickness insurance comprises the insured

employees, members of manufacturing and farming co-operatives, self-employed persons – artists and others (scientific workers, journalists and the like). Persons on maternity and parental leave, persons on compulsory military service and prisoners placed in penitentiary institutions are not included in the average number of persons covered by sickness insurance.

In the year 1999 the sample of 20 per cent of all terminated cases of disability to work was included in the statistical processing of the terminated cases of disability to work. Since 2000 data are processed by exhaustive statistical survey.

Expenditures paid by health insurance companies are obtained by statistical survey in health insurance companies. More information is given in chapter II. Finance. Health expenditures paid by citizenship are obtained by the sample survey in households.

Data on **drugs consumption** are obtained from individual pharmacies. Drugs consumption is surveyed by drugs categories, producers, producer countries and it is given in number of consumed packs and financial value.

Definitions

Physician's post is an indicator of rate of providing health services in a particular branch and a particular area. It is determined by the number of contract duty hours of physicians where 40 working hours per week or 33,5 working hours per week in dangerous work-places, respectively, are considered as one physicians' post according to the particular rules (up to 2001 it was 42,5 and 36 hours). Partial or additional duties are converted to the whole physicians' posts.

Day of stay is all calendar day, when a patient was provided with all of the services, which a bed establishment can provide, i.e. treatment including accomodation and broad.

Average length of stay in days is a ratio of the number of days of stay and number of hospitalised patients.

Treatment (examination) is the set of all activities done by physician or nurse according to instructions and under control by treatment (examination) of one patient in the same outpatient department (working place at flat of ill) by one visit of patient.

Public pharmacy provides pharmacy care for public including of individually prepared drugs. In the framework of pharmacy care a pharmacy provides drugs and prepares, checks, stores, gets out and sells drugs, gives special information about drugs and consultation on determination and monitoring of therapeutic method.

Average duration of disability to work is the number of days of disability to work per one case.

Average percentage of disability to work per year is calculated as a ratio of calendar days of disability to work due to illness and injury and average number of employed covered by sickness insurance, multiplied by the number of calendar days of the year.

Expenditures paid by health insurance companies are payments of health insurance companies for health care provided to their insured in accordance with the valid Therapeutic Regulation.

Expenditures paid by citizenship include the expenditures of population for health and pharmaceutical products, therapeutic devices and for out-patients and hospitals health services.

Average price of drug per pack is defined as a ratio of value and number of packs of consumed drugs. The value of consumed drugs is expressed in Slovak crowns and for its calculation is used maximal prise determined by the Ministry of Finance of the SR in the period of drug consumption.

Source

Data are obtained from processing of sector statistical surveys of the Ministry of Health of the SR (Institute of Health Information and Statistics) and from the processing of the State Institute for Control of Drugs (drugs consumption). There are also used the administrative sources of following organizations: Ministry of Defence of the SR, Ministry of Interior of the SR, Ministry of Justice of the SR, Ministry of Health of the SR, The Ministry of Transport, Posts and Telecommunications of the SR, Regional Office of Public Health Banská Bystrica (infectious diseases).

Figures on disability to work due to disease and injury and figures on expenditure in health sphere paid by citizens and health insurance companies are taken from the processing of the Statistical Office of the SR.

More information can be found in the annual publication Disability to Work Due to Disease and Injury and in annual publications Selected Indicators on Health Care; Selected Indicators on Health Insurance Companies, the Social Insurance Agency and the National Labour Office and Disability to Work Due to Disease and Injury or in the ministries and other institutes.

VI.3–1. Lekárske miesta, lôžka v zdravotníckych zariadeniach, lekárne k 31. 12.[1)]

VI.4 Social Secutiry

Methodological notes

Social security consists of the pension security, sickness insurance, state social benefits and social assistance.

Pension security is comprised of the old-age security, security in invalidity and in case of missing breadwinner. The pension security covers mainly employees, members of farming co-operatives, members of manufacturing co-operatives and self-employers.

Pension security includes an old-age pensions (full or shared), invalidity pensions (full or partial), widow's, widower's, orphan's pensions, long-term service pensions and pensions declared before January 1, 1957. Wife's pensions, social pensions, increase of pension in case of disability and increase of pension in case of sole source of income are state benefits refunded by government. Since January 1, 2001 has been cancelled provision about increase of pension in case of disability.

Benefits of **sickness insurance** include four systematic benefits: sickness insurance benefits, family member attendance allowance, maternity financial allowance and equalising pregnancy and maternity allowance. In full extent these benefits are granted to employees and members of farming and manufacturing co-operatives. Self-employers are not entitled to get a family member attendance allowance, equalising pregnancy and maternity allowance. Unemployed are not entitled to get a sickness insurance benefits.

Social security benefits includes **state social benefits** is such as children and parental allowance, the subsistence contribution, compensation for earnings during serving in armed forces and during civilian service, funeral allowance and child-birth allowance, parental allowance at birth more children and foster parent remuneration have been transformed from benefits of social care to state social benefits (single contribution for settlement children needs, recurring contribution for settlement children needs, reward of nursing father). Since 2000 is granted contribution for accommodation.

Health resonance including transport belong to the nonsystematic sickness insurance benefits refunded by government.

There have been changes in the branch of the social care resulting from the transformation

of social security. According to the Act No 195/1998 Code of Acts on Social Assistance the system change occurs in the branch of benefits granting to persons in destitution. Allocated benefits of social care addressed to different groups of persons were transformed to the only benefit of social assistance. Expenditures for social assistance are classified according to the Budgetary Classification valid for particular year.

Services and benefits of social assistance are given to the persons for reducing and getting over material or social destitution with their active participation.

Institutional care is provided in the facilities of social services according to the Act No 195/1998 Code of Acts on Social Assistance. According to the Act No 416/2001 Code of Acts on the transfer of some competencies from the state-administration bodies to the municipalities and higher territorial units, most of facilities were transfered to the field of activity of self-governing regions and municipalities.

Definitions

Old-age pension is the fundamental benefit of pension security. Citizens qualify for an old-age pension after a minimum 25 years of employment and reaching a determined age limit (depending on job category: 55 – 60 years for men, for women 53 – 57 years also on the number of children raised).

Invalidity pension is allocated for citizen who is suffering from a long-term adverse state of health and meets the conditions for allocation of invalidity pension. In case of invalidity caused by work injury, the condition for the required number of years in employment is always considered fulfilled.

Orphan pension is allocated to the dependent children due to death of a parent or adoptive parent. Full orphan benefit is allocated to children whose parents (or adoptive parents) both died. These benefits do not depend on employment duration.

Widow's pension is allocated as the partial replacement of deceased husband's income.

Widower's pension is allocated as the partial replacement of deceased wife's income during care for at least one dependent child.

Wife's pension is the pension security benefit refunded by government available to married women who are fully disabled or have reached 65 years of age but who do not qualify for benefits based on their own pension schemes and earn no income.

Social pension is allocated to persons without subsistence who do not qualify for pension.

Increase of pension in case of disability is the allowance for replacement of increased costs relating to the need of serving and taking care of him/her by another person.

Increase of pensions in case of sole source of income is the state benefit of pension security granted in case that, old-age, invalidity, widow's, widower's or full orphan's pension is the only income source and do not reached 1,1multiple of statutory minimum.

Sickness benefits temporary compensate person for loss of income due to sickness or accident.

Family member attendance allowance is claimed when caring for a sick child under the age of 10 or caring for another sick member of the family when the provision of such care by another person is necessary.

Maternity financial allowance compensates woman for loss of income during 28 weeks in last period of pregnancy and after delivery. It is paid 37 week in case of an employee who is single or who has given to two or more children.

Equalising pregnancy and maternity allowance is paid during pregnancy and until the end of the nine month from delivery to a woman who is transferred to a different job because her original work was dangerous or threatened her pregnancy or maternity.

Children's allowance provides to all dependent children at the same amount regardless of children age and income of family members according to the law.

Parental allowance is repeated benefit entitled to the parent or person for permanent personal and proper care of at least one child up to the age of 3 years or up to the age of 7 years for child recognised as suffering from long-term severe health impairment.

Child-birth allowance is a single benefit given to the mother who gave birth to the child or is given to the father of the child or to the another person meeting the conditions according to the law.

Foster parent remuneration is a single or repeated benefits paid to the children in foster-age.

Funeral allowance is a single benefit given as the partial replacement of expenditure for the funeral of a person under the social security.

Contribution for accommodation is state social benefit by which government contributes for replacement of expenditures linked to dwelling or family house using.

Health resonance is a benefit given for the persons under the social security and for their family members, whose health state gives reason for its allocation.

Benefit of social assistance is a single or repeated benefit allocated to the person in material destitution to provide basic living condition of this person.

Source

Published data on pension security benefits, sickness insurance and state social benefits are taken from the informative system of the Social Insurance Company and from statistical surveys of the Ministry of Labour, Social Affairs and Family of the SR.

Published data on social assistance and facilities of social services are the results of the processing of the Statistical Office of the SR.

Data source about refugees in the Slovak Republic is the information system of the Migration Office of the Ministry of Interior of the SR.

More information is given in annual publications Selected Indicators of Social Welfare and Social Care Facilities or in mentioned ministry and in the Social Insurance Company.

VI.5 Culture and Religion

Methodological notes

Statistical data presented in the chapter refer to the network and activity of the state, municipal and private **cultural institutions**.

All kinds of professional theatres of the Ministry of Culture of the SR (including theatres for the youth and puppet ones) in 1998 – 2000 except the Theatre of the Academy of Music and Dramatic Arts.

Data for galleries included state, self-government and private institutions.

The term "Musical ensembles" contains data on state musical ensembles and state ensembles of songs and dances.

The indicators **Radio broadcasting and TV broadcasting** encompasses providers on the basis of the law – public broadcasters and providers on the basis of the licence – private broadcasters.

In radio private broadcasting since 2001 broadcasted programme including broadcasted hours for radio broadcasters not for individual transmitting frequencies. In 2002 arrived a change of program´s structure declaration in radio and TV broadcasting.

In 1999 data for TV broadcasting surveyed only for terrestrial broadcasting (TBC), i. e. by air land transmitter. At the same time proceeded broadcasting by cable distributed system (CDS) and by combined systems TBC and CDS. Data for these broadcastings began surveying in 2000. In yearbook 2004 data for private television broadcasting are introduced by all way.

The indicator "number of titles" includes local publications if they are different from main publications, parts of newspapers sold separately, special publications, morning and evening papers with own name and registration, different language versions of the same periodical. There are not included local issued papers of the same papers, if they are not different from each other and parts of papers, if they are not sold separately.

The indicator "circulation" also includes non-sold pieces.

According to the housing and population census the **religiosity** means an activity of population in some church or a relation to some church. Religiosity of children under 15 was given by their parent decision.

Figures on religion show selected indicators on five most frequent registered churches obtained since 2002 by questionnaire method of the Statistical Office of the SR and since 2003 from state statistical survey of the Ministry of Culture of the SR.

Definitions

Broadcasted program presents all programs broadcasted through the own independent networks (including national broadcasting), local or outside production.

General news cover regularly daily news and commentaries to main events, including sports news.

Loans to users include the loans of all library units, i. e. books, periodicals, other documents and information sources to readers, i. e. without inter-library loan service.

Periodical publication is periodical press or another periodical issued at least two times per year with the same title, periodicity indication and standard layout for the publication.

Branch office of the museum refers to the detached parts of museum (including monuments belonging to museum), which are out-of the museum residence and create administrative entity with the museum.

Exposition is the whole installation placed in one building and opened for public.

Membership in civil associations, professional organizations, trade unions etc. is given in accordance with their rules.

Source

Source of data on culture is annual statistical survey in several ministries. The Ministry of Culture of the SR obtains data for theatres, musical ensembles, museums, galleries, audio-visual works, libraries (except university libraries), radio and TV broadcasting, observatories, planetariums, astronomic cabinets, periodical press and churches. University libraries data are obtained from the Ministry of Education of the SR and zoological gardens data are reported by the Ministry of Environment of the SR.

Data on membership in civil associations were taken from central bodies of civil associations by questionnaire method.

More information can be obtained in annual publication Selected Indicators on Culture or in mentioned ministries as well as on their Internet web-site.

VI.6 Physical Culture

Methodological notes

Physical culture according to the Act No 288/1997 Code of Acts on Physical culture and on change and amendment of Act No 455/1991 Code on tradesman (Act of tradesman) in wording of later rules is understood as (both) – an organised or non-organised, individual or collective activity connected with physical training, sport, hiking and active recreation activity of people. Physical culture according to this Act is carried out by relevant authorities of Government, bodies of self-government and civil association and other legal persons and their community associations (Slovak Association of Physical Culture and Association of Technical and Sporting Activities of the SR).

Number of members of individual unions of the Association of Technical and Sporting Activities of the SR is given only for years, when they were its members.

Definition

Juniors include sportsmen who have not reached the age in which they can attend races for adults category. Various sports have different age for the category of adults. In gymnastics it is the age of 16, in different sports it is varying up to 23 year of the age.

Source

Data are obtained from the statistical surveys of the Ministry of Education of the SR (Institute of Information and Prognoses of Education) and administrative data taken from the Association of Physical Training Unions and Clubs of the SR as well as from the Association of Technical and Sporting Activities of the SR. Detailed data can be granted by organizations mentioned above.

VII.1 Crime-rate and Justice

Methodological notes

Data on **criminality** are surveyed in the framework of the Registration Statistical System of Criminality. There are registered announcements on a suspicion from commission of crimes, data on crimes and data on known perpetrators of criminal acts. The statistical tables also contain the data registered by the Railway Police of the SR, the Office of Military Police of the General Staff of the Army of the Slovak Republic and the General Directorate of Union for Prison and Justice Guards of the SR. Data on cases settled by courts and results of lawcourts proceedings are taken from the Ministry of Justice of the SR.

Definitions

Criminal offence is for society danger act, of which characters is presented in Criminal Act.

Homicide is a criminal offence by which perpetrator knowingly death by another person.

Robbery is a criminal offence of perpetrator when he takes possession of the things owned by another person under the threat of immediate violence.

Battery is a criminal offence of perpetrator when he causes damage the health to another person with consequence of disability to work of this person in duration at least 7 days.

Violence criminality includes violence criminal offences: homicide, robbery, battery, blackmail, common coerce, burglary etc.

Moral criminality includes criminal offences relating to the laws on morality breaking: rape, sexual abuse, imperilling of morality, procuring, etc.

Economic criminality is specific kind of criminality causing economic damages to the country, to legal and natural persons by breaking the enactments of economic relations.

Cases mean an indication of cases registered in particular register and being on the agenda at the courts. One case can involve more persons.

Criminal cases are cases being on the agenda at the courts on the basis of suit ceded to the courts by the prosecutor's office, within which the decisions on guilt, punishment, protective measures and compensation of damages caused by criminal activity are made.

Fill is total number of criminal cases that entered the courts during the calendar year, eventually cases registered in particular register as a consequence of application of revisions. In civil cases and in care for minor children, fill represents the number of proposals recommended to the court to be dealt with and the courts register them into a particular register.

Defendant is a person against whom a legal action was brought to the court.

Settled is total number of cases completed in the course of the calendar year by legal decision on conviction, acquittal, abolition of the criminal prosecution or conveying to another body.

Unsettled is number of cases that were not completed legally for some reason in the course of the calendar year. These data are always referring to December 31, of given year.

The main part of **civil cases** consists of cases regulated by the Civil Code, Law on Family, Law on Land and Labour Code.

Sued person is a person sued for committing particular criminal offence, if particular bodies started criminal charge. Accompanying the term "sued for committing a serious criminal offence" there is used the term "detaining", which is directed in written by a judge on submission of prosecutor .

Convict is a person on whom a sentence was passed that came into force.

Sentence without suspension is sentence to imprisonment in penitentiary institutions administered by the Ministry of Justice of the SR.

Suspended sentence is sentence to imprisonment that is suspended for 1 to 5 year's probation.

Banned profession is forbidden to operate in certain occupations, professions, functions or activities. The duration of this sentence is limited to the period of 1 to 10 years. The sentence can be passed on convicted juveniles only in case if it does not prevent them from the preparation for their future profession.

Habitual offender is person on whom the sentence was passed by the court taking into account his/her previous conviction as an exacerbating circumstance.

In addition to the duration of sentence to imprisonment without suspension according to the seriousness of the committed crime, the court imposes also the **reformatory and reclamation group** into groups 1st till 3rd to convicts while serving their sentences. It is executed

that the higher is the rank of the reformatory and reclamation group the smaller is the extent of rights of convicts and the larger is the extent of limitations.

Source

Statistical data source on criminality are administrative data of the Ministry of Interior of the SR. Data on justice are taken from basic materials of the Ministry of Justice of the SR.

More information is given in annual publication Selected Indicators on Criminality, Road Traffic Accidents and Fires or in above mentioned ministries.

VII.2 Accidents and Fires

Definitions

Killed persons are persons who died in the place of accident or in the place of fire, when being transported to hospital or by 24 hours after the accident.

Material loss is level of arose loss set by the police on the basis of the values indicated by parties involved in the accident.

Direct material loss is sum of losses calculated from residual value of tangible fixed assets, materials and other means destroyed by the fire, estimated.

Rescued valuables are sum of values of tangible fixed assets and other valuables rescued from fire.

Source

Source of statistical data on traffic accidents and fires is the Ministry of Interior of the SR, the Office of Fire Prevention and the Institute of Fire Technics and Expertises.

More information can be found in publication Selected Indicators on Criminality, Road Traffic Accidents and Fires, on the Ministry of Interior of the SR, resp. on the Presidium of Fire and Rescue Corps can provide you more information.

Methodological notes

According to the Act No 221/1996 Code of Acts on Territorial and Administrative Division of the SR, which came into force on July 24, 1996, regions broken up into districts have become the administrative units of the SR. The territory of the SR has been administratively divided into 8 regions and 79 districts in the year 2003.

The Nomenclature of Territorial Units for Statistics (NUTS) was established in order to assurance processing and dissemination of comparable regional statistics within European Union. NUTS is hierarchical classification of five levels. In case of the Slovak Republic NUTS 1 comprehensive whole republic, NUTS 2 is created of 4 regions aggregation – areas, NUTS 3 comprise of 8 regions, NUTS 4 is represented of 79 districts and NUTS 5 level has been introduced comprising 2 891 municipalities of the Slovak Republic as of December 31, 2003.

This subchapter contains selected indicators **by regions and areas** of the Slovak Republic. According to the Nomenclature of Territorial Units for Statistics this classification is equivalent with the level NUTS 2 and NUTS 3, which are key levels in term of realization of regional policy.

Wider methodological description of indicators is given in the respective subchapters. This part includes only differences and deviations between processing methods or sets of statistical units and data or results, respectively, for the whole Slovak Republic.

The methodology of compilation of **regional gross domestic product** and indicators from regional accounts is based on the European System of National and Regional Accounts in the Community (ESA 1995). The base for estimates of regional gross domestic product are national accounts, which have been gradually harmonized with ESA 95 methodology since 1996. Presented results for 1999 to 2001 are compiled according to the methodology of annual national accounts for year 2000, in which was finished implementation ESA 95 basic principles. In regard to methodological changes data are not consistent with the results published in the previous period.

Gross domestic product at market prices is the final result from production activity of resident production units, which was created during current accounting period. **Regional**

gross domestic product is calculated as the sum of values added for branches in the region and taxes on products reduced by subsidies on products.

Compilation of regional indicator **gross value added** by branches is based on statistical and administrative data sources. Main sources of statistical data are surveyed on the basis of specific annual reports for a set of organizations with 1 and more employees registered in the Business Register and for a set of non-incorporated natural persons including expert statistical estimates for production on own use and for imputed production of dwelling services. Administrative data sources are the Ministry of Finance of the SR (accounting annual statements, declarations of taxes, income and expenditures of state budget and state closing summary account), the National Bank of Slovakia and partially other ministries.

Presented alphabetic codes correspond to NACE categories.

Purchasing Power Standard is calculated on the basis of prices and volumes of goods sale, which are intercomparable and representative for the countries included into comparison. Purchasing Power Standard eliminates effects of different price level between countries. The base for calculation of purchasing power parity is the European Comparative Programme. National statistical offices including the SO SR take part in this programme.

Regional gross domestic product per capita is the share of two indicators – regional gross domestic product (where is used as compilation criterium the place of work) and average number of the population permanently residing in given region (based on the residence principle).

Marriages are classified in respect of the territory according to the last domicile of the bridegroom. **Divorces** are classified in respect of the territory according to the last common domicile of the married couple. In case that they did not live together it is classified according to the domicile of the divorce proposer.

Employment is surveyed by territorial (establishment) method. In consequence of this, published data are partially different from data for the SR in total, which are surveyed by enterprises method.

Data on emissions of basic pollutants are only refer to stationary pollution sources.

Regional acounts for agriculture are calculated only on the NUTS 2 level, i.e. for four areas of the Slovak Republic.

Turnover and average number of employees in industry are processed for industry in total including small enterprises and estimates for tradesmen.

Data of the indicator **"started dwellings"** show the number of building permissions issued. The indicator **"completed dwellings"** shows the number of dwellings that were approved for use. Number of **dwellings under construction** is the difference between these two indicators regardless of viewpoint of time. Number of rooms in completed dwellings is given on the basis of approvals.

Data on **criminality** refer to the criminal offences ascertained by the police corps, they do not include the offences ascertained by the railway police, customs administration, prison and court guard and military police. All criminal offences are included only in summary data for the Slovak Republic in the subchapter Crime-rate and Justice (VII.1).

Definitions

Indicators definitions are given in the respective subchapters of this publication.

Source

This subchapter was prepared mainly from the indicators processed in the territorial division from the sources of the Statistical Office of the SR.

Data source on purchasing power standard exchange rates and on average level of GDP per capita in the European Union is the Statistical Office of the European Union (Eurostat). The eventual difference among data on gross domestic product per capita, published in other part of this publication are caused by utilization of round data for calculation, published by Eurostat.

Emissions of basic pollutants are taken from the Slovak Hydrometeorological Institute and data on criminality, accidents and fires from the Ministry of Interior of the SR.

More information by regions can be found in quarterly publication Selected Data on Regions, in annual publication Regional Comparisons and from the publication the Regions of the Slovakia.

VIII.2 Towns

Methodological notes

This subchapter contains selected data on **towns of the Slovak Republic.**

A municipality is declared a town by the National Council of the SR by a governmental proposal according to section 22, subsection 1 of Act No 369/1990 Code on the Municipal Constitution in wording of latter rules. As of December 31, 2003 there are 138 towns in the Slovak Republic.

Data on **geographic conditions and on the level of the civic and technical infrastructure** of the towns are obtained in the framework of statistical subsystem of Towns and Municipal Statistics. Data are surveyed for all municipalities and towns of the Slovak Republic. Data are updated as of December 31, data on pre-primary facilities as of September 30, data on basic and secondary schools as of September 15, and data on higher education institutions as of October, 31.

Reporting units are municipalities (in Bratislava and Košice – town parts), owners or administrators of water, sewage and gas supply systems.

Changes in area of some towns occurred due to shifts of parts of the local areas caused by the territorial changes.

Definitions

Definitions of indicators are given in the respective subchapters of this publication.

Source

Published data for demography are the result of statistical surveys, other data are drawn up from database of Towns and Municipal Statistics, which obtains data from a special statistical surveys and from other databases. Data on houses and dwellings are the results of the Housing and Population Census as of May 26, 2001. These sources provide more information for all municipalities of the Slovak Republic.

IX.1 International Surveys

Methodological notes

The data are either taken from the sources below or are calculated by the Statistical Office of the Slovak Republic from the data reported in the sources. Some data on the Slovak Republic have been obtained from the sources of the Statistical Office of the Slovak Republic. They are processed by the national methodology, therefore the data are not fully comparable with data of other countries. The data published in some international statistical yearbooks are recalculated according to the methodology of a given international organization and therefore they are not always in compliance with the data published for the Slovak Republic by the Statistical Office of the Slovak Republic. Source of data is mentioned below the tables.

Names of countries are given in abbreviated widely used forms that are not always in compliance with official full names of the countries.

The Central European Free Trade Agreement (CEFTA) was signed on 21st December 1992 in Krakow. The original signatories of the Agreement was the Czech Republic, Hungary, Poland and the Slovak Republic. The following countries became members through accession: Slovenia (January 1, 1996), Romania (July 1, 1997), Bulgaria (January 1, 1999).

Data for 2002 are, in most cases, preliminary.

Definitions

Life expectancy is defined as the average number of years of life remaining to persons, if subject to mortality conditions of the year indicated.

Employment rate expresses a share employed persons aged 15 – 64 from the total population of the same age group.

Long-term unemployment rate is defined as the duration of unemployment during 12 months and more.

Youth education attainment level expresses the share of the young people aged 20 – 24 having completed at least upper secondary education from the total population of the same age group.

Unemployment rate is present by the labour force sample survey (methodology of the International Labour Organization, ILO).

The volume index of **gross domestic product per capita in Purchasing power standards** is expressed in relation to the European Union average set to equal 100 (EU 15 = 100).

The indicator **energy intensity of the economy** is the ratio between the gross inland consumption of energy and the gross domestic product for a given calendar year. It measures the energy consumption of an economy and its overall energy efficiency. The GDP figures are taken at constant prices to avoid the impact of the inflation, base year 1995 (ESA 95).

The indicator **volume of freight transport** relative to GDP is defined as the ratio between tonne-kilometres (inland modes) and GDP (in costant 1995 EUR). It includes transport by road, rail and inland waterways.

Comparative price levels are the ratio between Purchasing power parities and market exchange rate for each country. The ratio is shown in relation to the EU average (EU = 100). If the index of the comparative price levels shown for a country is higher (lower) than 100, the country concerned is relatively “expensive” (“cheap”) as compared with the EU average.

Poznámky k Európe:

1) európska časť Turecka je zahrnutá do Ázie
2) rok 2000
3) bez Faerských ostrovov a Grónska
4) bez zámorských departmentov, a to Francúzska Guyana, Guadeloupe, Martinique a Réunion
5) vrátane ostrovov Gozo a Comino
6) vrátane Azorských ostrovov a ostrova Madeira
7) bez Britských Normanských ostrovov a Isle of Man
8) s Baleármi a Kanárskymi ostrovmi a Alhucemas, Ceuta, Chafarinas, Melilla a Penon de Vélez de la Gomera

Poznámky k Ázii:

1) európska časť Turecka je zahrnutá do Ázie
2) rok 2000
3) bez Honkongu a Macao
4) vrátane časti Kašmíru-Džammu pod správou Indie, ktorého konečné postavenie nebolo ešte určené
5) vrátane Východného Timoru
6) vrátane údajov za východný Jeruzalem a izraelských usadlíkov v určitých územiach okupovaných Izraelom od júna 1967
7) zahrnuje Hokkaido, Honshu, Shikoku, Kyushu
8) bez údajov za jordánske územie okupované Izraelom od júna 1967
9) bez údajov za Kašmír-Džammu, ktorého konečné postavenie nebolo ešte určené, Junagardh, Manavadar, Gilgit a Baltistan
10) zahrnuje 7 šejkátov-Abu Dhabi, Dubai, Sharjah, Ajaman, Umm al Qaiwain, Ras al Khaimah and Fujairah a územie, ktoré patrí Riyadhu po úprave hraníc v októbri 1955

Poznámky k Afrike:

1) rok 2000
2) vrátane enklávy Cabinda
3) bez údajov za Mayotte
4) bez Rodriguees a ostatných malých ostrovov
5) zahrnuje Bioko a Rio Muni

Poznámky k Amerike:

1) Havai, štát USA je zahrnutý do Ameriky
2) rok 2000
3) bez indiánskeho obyvateľstva žijúceho v džungli
4) bez kočovných indiánskych kmeňov
5) vrátane Carriacou a iných závislých území v Grenadských ostrovoch
6) vrátane Bequia a ostatných Grenadských ostrovov

Poznámky k Oceánii a Svetu:

1) rok 2000
2) vrátane Vianočného ostrova a ostrovov Fanning, Ocean, Washington
3) vrátane Campbellových a Kermadceových ostrovov a neobývaných ostrovov Antipodes, Aucklad, Bounty, Snares, Solander, Tree Kings
4) zahrnuje východnú časť Novej Guinei, Bismarckovo súostrovie, Bougainville a Buka zo Šalamúnových ostrovov a asi 600 menších ostrovov
5) zahrnuje Šalamúnove ostrovy (okrem Bougainville a Buka), vrátane ostrovov Ontog, Jáva, Rennel a Santa Cruz

Notes to Europe:

1) The European portion of Turkey is included in Asia
2) Year 2000
3) Excluding Faeroe Islands and Greenland
4) Excluding Overseas Departments, namely French Guiana, Guadeloupe, Martinique and Réunion
5) Including Gozo and Comino Islands
6) Including the Azores and Madeira Islands
7) Excluding Channel Islands and Isle of Man
8) Including the Balearic and Canary Islands and Alhucemas, Ceuta, Chafarinas, Melilla and Penon de Vélez de la Gomera

Notes to Asia:

1) The European portion of Turkey is included in Asia
2) Year 2000
3) Excluding Hong Kong and Macao
4) Including data for the Indian held part of Jammu and Kashmir, the final status of which has not yet been determined
5) Including East Timor
6) Including data for East Jerusalem and Israeli residents in certain other territories under occupation by Israeli military forces since June 1967
7) Comprising Hokkaido, Honshu, Shikoku, Kyushu
8) Excluding data for Jordanian territory under occupation since June 1967 by Israeli military forces
9) Excluding data for Jammu and Kashmir, the final status of which has not yet been determined, Junagardh, Manavadar, Gilgit and Baltistan
10) Comprising 7 sheikdoms of Abu Dhabi, Dubai, Sharjah, Ajaman, Umm al Qaiwain, Ras al Khaimah and Fujairah, and the area lying within the modified Riyadh line as announced in October 1955

Notes to Afrika:

1) Year 2000
2) Including the enclave of Cabinda
3) Excluding Mayotte
4) Excluding Rodrigues and other small islands
5) Comprising Bioko and Rio Muni

Notes to America:

1) Hawaii, a state of the U.S.A., is included in America
2) Year 2000
3) Excluding Indian jungle population
4) Excluding nomadic Indian tribes
5) Including Carriacou and other dependencies in the Grenadines
6) Including Bequia and other islands in the Grenadines

Notes to Oceania and World:

1) Year 2000
2) Including Christmas, Fanning, Ocean, Washington Islands
3) Including Campbell and Kermadec Islands as well as Antipodes, Auckland, Bounty, Snares, Solander and Tree Kings island, all of which are uninhabited
4) Comprising eastern part of New Guinea, the Bismarck Archipelago, Bougainville and Buka of Solomon Islands group and about 600 smaller islands
5) Comprising the Solomon Islands group (except Bougainville and Buka), Ontong, Java, Rennel and Santa Cruz Islands.

X.2 Elections to the European Parliament

Methodological notes

The legal base for **the elections to the European Parliament** is the Act No 331/2003 Code of Acts on Elections to the European Parliament in wording of Act No 515/2003 Code of Acts. According to the section 46, subsection 2 of this act the Statistical Office of the Slovak Republic is responsible for issuing the methodology of results processing in the elections to the European Parliament as well as the processing of elections results.

Next abbreviations for the names of political parties or coalitions are used in published results:

SMK-MKP	Strana maďarskej koalície – Magyar Koalíció Pártja
SDKÚ	Slovenská demokratická a kresťanská únia
SMER (tretia cesta)	SMER (tretia cesta)
ĽS-HZDS	Ľudová strana – Hnutie za demokratické Slovensko
KDH	Kresťanskodemokratické hnutie

Definitions

Registered persons are persons, who can vote to the European Parliament according to the act. They are citizens of the Slovak Republic, who is at least 18 years old on polling day and who stay at the area of the Slovak Republic on polling day and citizens another Member State of the European Union, who is at least 18 years old on polling day and has permission to reside permanently in the Slovak Republic.

Number of voters with distributed envelopes is the total number of voters, who in the day of elections came into the polling station and whom were given envelopes and ballots by the ward election committee.

Valid votes are all valid ballots delivered for political parties or coalitions.

Share of valid votes is calculated from the number of valid votes for all political parties or coalitions and the number of developed envelopes.

Share of valid votes for individual political party or coalition is calculated from the

number of valid votes delivered for the corresponding political party or coalition and the total number of valid votes delivered for all political parties or coalitions.

Number of mandates is the number of places in parliament, which were allocated to the corresponding political party or coalition at the base of valid votes number obtained in elections.
