## 主要统计指标解释

**森林面积** 指生长着乔木和竹林,郁闭度在 0.3 以上(不包括 0.3)的林地面积,即有林地面积。它是反映森林资源总面积的重要指标。森林面积包括天然林面积和人工林面积。但不包括灌木林地和疏林地面积。

**森林覆盖率** 通常是指森林面积占土地总面积之比,一般用百分数表示。但国家规定在计算森林覆盖率时,森林面积还包括灌木林面积、农田林网树占地面积以及四旁树木的覆盖面积。森林覆盖率,是反映一个国家或地区森林资源和绿化水平的重要指标。计算公式:

$$\text{森林覆盖率}(\%) = \frac{\text{森林面积}}{\text{土地总面积}} \times 100\%$$

本《年鉴》内所列森林覆盖率是按有林地面积计算的。

**活立木总蓄积量** 指全部土地上树木蓄积的总量。包括森林蓄积、疏林蓄积、散生木蓄积和四旁树蓄积。

**森林蓄积量** 指森林面积上生长着的林木树干材积总量。它是反映一个国家或地区森林资源总规模和水平的重要指标。

**草地面积** 指牧区和农区用于放牧牲畜或割草,植被盖度在 5% 以上的草原、草坡、草山等面积。包括天然的和人工种植或改良的草地面积。

**内陆水域总面积** 指江、河、池塘、湖泊、塘堰、水库等各种流水或蓄水的水面占地面积。

**矿产保有储量** 指探明的矿产储量(包括工业储量和远景储量)扣除已开采部分和地下损失量后的年底实有储量。它反映国家矿产资源的现状。

## Explanatory Notes for major Indicators

**Forest Area** refers to land of trees, and bamboo with canopy density above 0.3, including land of natural woods and planted woods but excluding bush land and thin forest land, which reflects the total area of afforestation.

**Forestry Cover-rate** refers to the ratio of area of afforested land to total area of land (measured in percent). According to regulations of the country, when calculating Forestry Cover-rate, in addition to afforested land, bush land, forestry land inside farmland and along sides should be taken into account. This indicator reflects forestry resources and afforestation progress of a country or region. The statistics of Forestry Cover-rate in this statistical year book is calculated as follows:

$$\text{Forestry Cover-rate (\%)} = \frac{\text{Area of Forestry Land}}{\text{Area of Total Land}} \times 100\%$$

**Total Reserve of Live Trees** refers to total cube of wood growing in land, including woods in forestry land, thin forest land or depleted forest land, forestry land inside farmland and along sides.

**Reserve of Forestry Wood** refers to total cube of wood growing in forestry land, which reflects total size and level of forestry resource of a country or region.

**Grass Land** refers to grassland grass-hillside, and grass-mountain in husbandry and farm areas used for herding and grass growing with vegetation coverage above 5%, including natural, planted or improved grasslands.

a) National income used is not equal to total national income ( national income produced ) due to net imports and statistical discrepancies. Conceptually, national income used=national income produced + exports.

## 主要统计指标解释

**国内生产总值** 是按市场价格计算的国内生产总值的简称。它是一个国家(地区)所有常住单位在一定时期内生产活动的最终成果。国内生产总值有三种表现形态,即价值形态、收入形态和产品形态。从价值形态看,它是所有常住单位在一定时期内所生产的全部货物和服务价值超过同期投入的全部非固定资产货物和服务价值的差额,即所有常住单位的增加值之和;从收入形态看,它是所有常住单位在一定时期内所创造并分配给常住单位和非常住单位的初次分配收入之和;从产品形态看,它是最终使用的货物和服务减去进口货物和服务。在实际核算中,国内生产总值的三种表现形态表现为三种计算方法,即生产法、收入法和支出法。三种方法分别从不同的方面反映国内生产总值及其构成。

**国民生产总值** 是按市场价格计算的国民生产总值的简称。它是一个国家所有常住单位在一定时期内收入初次分配的最终成果。一国常住单位从事生产活动所创造的增加值在初次分配过程中主要分配给该国的常住单位,但也有一部分以劳动者报酬和财产收入等形式分配给该国的非常住单位,同时,国外生产所创造的增加值也有一部分以劳动者报酬和财产收入等形式分配给该国的常住单位。从而产生了国民生产总值概念,它等于国内生产总值加上来自国外的劳动者报酬和财产收入减去付给国外的劳动者报酬和财产收入。与国内生产总值不同,国内生产总值是一个生产概念,而国民生产总值则是个收入概念。

国民生产总值同社会总产值、国民收入的区别,从核算范围看,社会总产值和国民收入都只计算物质生产部门的劳动成果,而国民生产总值除计算物质生产部门劳动成果外,还计算非物质生产部门的劳动成果。从这三个指标的价值构成看,社会总产值计算了社会产品的全部价值;国民生产总值计算在生产产品和提供劳务过程中增加的价值,即增加值,不计算中间产品和中间劳务投入的价值;而国民收入除了不计算中间产品价值外,还不包括固定资产折旧价值,即只计算净产值。

**国民收入** 即国民收入生产额,是从事物质资料生产的劳动者在一定时期内新创造的价值,也就是从社会总产值中扣除生产过程中消耗掉的生产资料价值后的净产值,农业、工业、建筑业、运输邮电业和商业(包括饮食业和物资供销业)净产值之和就是国民收入。我国计算国民收入的方法有二:(1)生产法,用各物质生产部门的总产值减去生产中的物质消耗价值(如用于生产的原材料、种籽、肥料、燃料、动力等消耗,生产用固定资产折旧等)后的净产值相加。(2)分配法,从国民收入初次分配的角度出发,等于物质生产部门的工资、职工福利基金、利润、税金、利息等项目的总和。

**国民收入使用额** 国民收入生产额经过在全社会范围内进行分配和再分配,形成各物质生产部门、非物质生产部门和居民个人的最终收入。最终收入一部分用于居民个人生活和社会公共需要,形成消费,即消费额;另一部分用于扩大社会再生产、增加非物质生产部门的固定资产和各种储备,形成积累,即积累额。消费额和积累额之和就是国民收入使用额。国民收入使用额与国民收入生产额的差别,主要是进出口差额(地区为流入、流出差额)影响。进口大于出口,国民收入使用额大于国民收入生产额,反之,国民收入使用额小于国民收入生产额。此外,还受统计计算误差的影响。

**消费额** 用于居民个人的生活消费和社会公共消费的物质产品总和。其物质形态为一定时期内用于个人和社会消费的消费品总量以及非生产性固定资产(包括住宅)的磨损。

居民消费包括居民个人日常生活中消费的食品、衣着、鞋袜、家庭耐用消费品、日用杂品、文教卫生用品、水、电、燃料以及住房磨损等物质消费,还包括居民在文化生活服务性支出中属于物质产品的消费。

社会消费包括国家行政机关、国防治安机关、文教卫生体育、社会福利、科学研究事业单位、经济建设部门的事业单位、人民团体等非生产机构使用的燃料、电力、办公用品、图书和一般设备购置等物质消费和这些单位的房屋及设备固定资产磨损的价值。

**积累额** 用于社会扩大再生产和非生产性建设以及增加社会储备和物质产品价值,即国民收入使用额中除去用于当年消费之后的余额。其物质形态为一定时期内物质生产部门和非物质生产部门新增加的固定资产(扣除国家资产磨损)和流动资产。积累按用途可分为生产性积累和非生产性积累;按性能可分为固定资产积累和流动资产积累。

生产性积累由社会产品中的生产资料组成,包括物质生产部门新增加的生产用固定资产(扣除固定资产磨损)以及各生产企业的原材料、燃料、半成品和属于生产资料的产成品库存、商品库存、物资储备库存等流动资产的增加额。

非生产性积累由社会产品中的消费资料组成,包括新增加的各种非生产用固定资产(扣除磨损)以及生产消费品工业企业的产成品库存和商业部门消费品库存的增加额。

积累和消费在国民收入使用额中所占比重分别叫做积累率和消费率。

**当年价格** 指报告期的实际价格,如工厂的出厂价格,农产品的收购价格,商业的零售价格等。使用当年价格计算的数字,是为了使国民经济各项指标互相衔接,便于考察当年社会经济效益,便于对生产和流通、生产和分配、生产和消费进行经济核算和综合平衡。

按当年价格计算的价值指标,在不同年份之间进行对比时,因为包含有各年间价格变动的因素,不能确切地反映实物量的增添变动。必须消除价格变动因素后,才能真实反映经济发展动态。因此,在计算增长速度时都使用按可比价格计算的数字。

**可比价格** 指在不同时期的价值指标对比时,扣除了价格变动的因素,以确切反映物量的变化。按可比价格计算有两种方法:一种是直接用产品产量乘某一年的不变价格计算;另一种是用价格指数换算。

**不变价格** 指用同类产品的年平均价格作为固定价格,来计算各年产品价值。按不变价格计算的产品价值消除了价格变动因素,不同时期对比可以反映生产的发展速度。新中国成立后,随着工农业产品价格水平的变化,国家统计局先后五次制定了全国统一的工业产品不变价格和农业产品不变价格,从1949年到1957年使用1952年工(农)业产品不变价格,从1957年到1971年使用1957年不变价格,从1971年到1981年使用1970年不变价格,从1981年到1990年使用1980年不变价格,从1990年开始使用1990年不变价格。

**平均每年增长速度** 在我国计算平均增长速度有两种方法,一种是习惯上经常使用的“水平法”,又称几何平均法,是以间隔期最后一年的水平同基期水平对比来计算平均每年增长(或下降)速度。另一种是“累计法”,又称代数平均法或方程法,是以间隔期内各年水平的总和同基期水平对比来计算平均每年增长(或下降)速度。

在一般正常情况下,两种方法计算的平均每年增长速度比较接近,但在经济发展不平衡,出现大起大落时,两种方法计算的结果差别较大。

本《年鉴》内所列的平均每年增长速度,除固定资产投资是用“累计法”计算以外,其余均用“水平法”计算。从某年到某年平均增长速度的年份,均不包括基期年在内。如建国四十三年平均增长速度是以1949年为基期计算的,则写为1950—1992年平均增长速度,余类推。

**各个计划时期** 表内所用各个“时期”代表的年份如下:恢复时期为1950年到1952年;第一个五年计划时期(简称一五时期)为1953年到1957年;第二个五年计划时期(简称二五时期)为1958年到1962年;第三个五年计划时期(简称三五时期)为1966年到1970年;第四个五年计划时期(简称四五时期)为1971年到1975年;第五个五年计划时期(简称五五时期)为1976年到1980年;第六个五年计划时期(简称六五时期)为1981年到1985年;第七个五年计划时期(简称七五时期)为1986年到1990年;第八个五年计划时期(简称八五时期)为1991—1995年。

**国有经济单位** 指生产资料归国家所有的各种企业、事业单位,以及各级国家机关、人民团体等单位。

**集体经济单位** 指生产资料归公民集体所有的各种企业、事业单位。包括农村各种经济组织经营的农、林、牧、副、渔业,乡、村经营的企业、事业单位;城市、县、镇以及街道举办的集体经济性质的企业、事业单位。

**私营经济单位** 指生产资料归公民私人所有的单位。包括私营独资企业、私营合伙企业和私营有限责任公司。

**联营经济单位** 指不同所有制性质的企业之间或者企业、事业单位之间共同投资组成新的经济实体。包括紧密型联营企业,半紧密型联营企业和松散型联营企业。

**股份制经济单位** 指全部注册资本由全体股东共同出资,并以股份形式投资举办企业。主要包括股份有限公司和有限责任公司。

**外商投资经济单位** 指外国投资者根据中华人民共和国有关涉外经济的法律、法规,以合资、合作或独资的形式在中国大陆境内开办企业。包括中外合资经营企业、中外合作经营企业和外资企业。

**港、澳、台投资经济单位** 指港、澳、台地区投资者参照中华人民共和国有关涉外经济的法律、法规,以合资、合作或独资的形式在大陆举办企业。包括合资经营企业、合作经营企业和独资企业。

**三次产业** 根据社会生产活动历史发展的顺序对产业结构的划分,产品直接取自自然界的部门称为第一产业,对初级产品进行再加工的部门称为第二产业,为生产和消费提供各种服务的部门称为第三产业。它是世界上通用的产业结构分类,但各国的划分不尽一致。我国的三次产业划分是:

第一产业:农业(包括种植业、林业、牧业、副业和渔业)。

第二产业:工业(包括采掘工业、制造业、自来水、电力、蒸气、热水、煤气)和建筑业。

第三产业:除第一、第二产业以外的其他各业。由于第三产业包括的行业多、范围广,根据我国的实际情况,第三产业可分为两大部门:一是流通部门,二是服务部门。具体又可分为四个层次。

第一层次:流通部门,包括交通运输业、邮电通讯业、商业、饮食业、物资供销和仓储业。

第二层次:为生产和生活服务的部门,包括金融、保险业,地质普查业,房地产、公用事业,居民服务业,咨询服务业和综合技术服务业,农、林、牧、渔、水利服务业和水利业,公路、内河(湖)航道养护业等。

第三层次:为提高科学文化水平和居民素质服务的部门,包括教育、文化、广播电视,科学研究、卫生、体育和社会福利事业等。

第四层次:为社会公共需要服务的部门,包括国家机关、政党机关、社会团体,以及军队和警察等。

## Explanatory Notes for Major Indicators

**Gross Domestic Product** refers to gross domestic product calculated at market price, which is all the final products of all resident units (enterprises and self-employed individuals) of a country (or region) during a certain period of time. Gross Domestic Product is presented in three different forms, i. e. value added, income, and products respectively. The form of value added refers to the total value of all products and services produced by all resident units during a certain period of time minus total value of inputs of non-fixed assets materials and services or the summation of the value added of all resident units; the form of income includes all the income items produced by all resident units and distributed primarily to all resident and non-resident units; the form of product refers to all final goods and services minus imports of goods and services. In the practice of national accounting, Gross Domestic Product is calculated by three approaches, i. e. product approach, income approach, and expenditure approach respectively to reflect Gross Domestic Product and its composition from different aspects.

**Gross National Product** refers to gross national product calculated at market price, which is the primarily distributed final products of all resident units of a country during a certain period of time. The value added by resident units of a country engaging in production activities is distributed mainly to the resident units of that country with part of it in the form of labors' compensation and property income distributed to non-resident units of the country. Simultaneously part of the value added created abroad is distributed to resident units of the country in the form of labors' compensation and property income. Thus the concept of Gross National Product is formed, which equals to Gross Domestic Product plus overseas income as labors' compensation and property income less payment abroad as labors' compensation and property income. Unlike Gross Domestic Product which is a concept of production, Gross National Product is a concept of income.

The difference among Gross National Product and Total Value of Society and National Income is that Total Value of society and National Income only take into account products of material production sectors, while Gross National Product, in addition to products of material production sectors, also takes into account of products non-material production sectors. In terms of the value composition of the three conceptions, Total Value of Society calculates the total value of all products of the society; Gross National Product counts only the newly created value in the process of producing goods and services, i. e. value added and excludes the value of inputs of intermediate goods and services; National Income excludes both the intermediate inputs and depreciation of fixed assets and counts only net value of output.

**National Income** or **National Income of Production** refers to the newly created value by labor engaging in material production activities during a certain period of time, i. e. the net value calculated by subtracting the value of input materials consumed in the process of production from Total Value of Society. The summation of net output value of agriculture, industry, construction, transportation, postal services, and commerce (including catering and material supplying and distributing) equals to National Income. Two approaches are applied in China's statistical practice for calculating National Income: (1) The Production Approach sums all net output values of various material production sectors after subtracting the value of all their input materials consumed in the process of production (for instance, the consumption of raw materials, seeds, fertilizers, fuel, power, etc. and depreciation of fixed assets, etc.). (2) Distribution Approach reaches National Income by adding up all the income items in primary distribution, which equals to the total of wages, bring benefits, profits, taxes, interests, and etc. of material production sectors.

**National Income Used** After distribution and redistribution in the whole society, National income transforms into the final income of material production sectors, non-material production sectors and individuals. Part of that final income is spent in individual living and social public needs, which is defined as consumption; the other part is spent on enlarging social reproduction, incrementing fixed assets for non-material production sectors, and increasing various reserves, which is defined as accumulation. The sum of consumption and accumulation is National Income Used, which differs from National Income Produced by the difference between imports and exports (and between inflow and outflow for a region within the country. When imports exceeds exports, National Income Used is bigger than National Income Produced, and vice versa. Statistics discrepancy also differs the two figures.

**Consumption** refers to total consumption of material products for individuals' living and public needs, which is the total amount of consumer goods used for individuals' and public needs and the wearing of non-productive fixed assets (including residence buildings) during a certain period of time.

Resident consumption includes individuals' consumption of food, clothing, footwear, household consumer durable goods, goods for daily use, articles for cultural life and education, water, electricity, fuels, and housing, etc. including consumption of material articles for cultural life and recreation.

Public consumption includes consumption of fuels, electricity, stationary goods, books, and purchase of office equipments, and wearing of buildings, equipments, fixed assets by non-production institutions of government administration, defense and public security, culture, health, and education, social welfare, science and technology research, economic construct, social work.

**Accumulation** refers to the value of material products used for enlarging social reproduction and non-production construction, and increasing social reserves, which equal to National Income Used minus total consumption of the current year. Accumulation is presented as newly increased fixed assets (less wearing part) and working assets of material production sectors and non-material production sectors during a certain period of time, which can be categorized as productive accumulation and non-productive accumulation by function, and fixed assets accumulation and working assets accumulation by nature.

Productive Accumulation refers to production means of social products, including increment of fixed assets (less wearing part) by material production sectors and increment of working assets as raw materials, fuels, semi-products, finished goods for intermediate use, stock of goods, materials reserve, etc.

Non-productive Accumulation refers to consumption goods social products, including increment of non-production fixed assets (less wearing part) and increases of stock of finished goods in industrial enterprises engaging in production of consumer goods and stock of consumer goods in sale enterprises.

The proportions of accumulation and consumption in National Income are defined as Accumulation Rate and Consumption Rate respectively.

**Current Prices** refers to the real prices in reference period of time, such as factory prices, purchasing prices of agricultural products, retail prices, etc. Statistics at current prices which tie up various indicators of national economy are applied to observe social and economic efficiency in the current year and to carry out the economic accounting and comprehensive balancing for production and circulation, production and distribution, production and consumption.

When comparing different years, the indicators in value term at current prices will not reflect the real changes in quantity accurately with changes in prices disturbing. The changes in prices must be excluded in order to reflect the real trend of economic development. Therefore, the comparable prices are applied when calculating growth rate.

**Comparable Prices** are applied when comparing indicators over time to reflect accurately the changes in real term. Two methods are used for calculating comparable prices: 1. output by constant price of certain year; 2. output in current prices divided by relevant price index.

**Constant Prices** refers to the average price of a given product in certain year, based on over-time comparisons of output value are made. As output value at constant prices excludes the factor of price changes, it reflects the trend of production development over time. Since 1949, with the changes in general price level, The State Statistical Bureau has issued nationally unifies constant prices five times: the 1952 constant prices for 1949-1957; the 1957 constant prices for 1958-1970; the 1970 constant prices for 1971-1981; the 1980 constant prices for 1981-1990; and the 1990 constant prices are used since 1991.

**Average Annual Growth Rate** Two methods for calculating Average Annual Growth Rate are applied in China. one is often called "level approach" or geometry average, which is derived by comparing the growth rate for the last year of the interval with that of the beginning year; the other is called "accumulating approach" or algebraic average or equation method, which is calculated by comparing the total growth rate of each year for the interval with that of base year.

Usually the results calculated by the two methods are fairly close, but they differ sharply when imbalance occurred in economic development with striking fluctuations in growth.

The Average Annual Growth Rates listed in this statistical yearbook are calculated by "level approach" except for the growth rate of investment in fixed assets. The base years are not listed when the years are listed for average annual growth rates for instance, the average annual growth rate of 43 years since 1949 is listed as average annual growth rate of 1950-1992 without listing the base year 1949. And the analogy of this is also for the rest.

**Various Planning Periods:** The conventional division of time period in this statistical yearbook is as follows: Rehabilitation Period, 1950-1952; The first five-year plan period (cited as first-five period), 1953-1957; The second five-year plan period (cited as second-five period), 1958-1962; The third five-year plan period (cited as third-five period), 1966-1970; The fourth five-year plan period (cited as fourth-five period), 1971-1975; The fifth five-year plan period (cited as fifth-five period), 1976-1980; The sixth five-year plan period (cited as sixth-five period), 1981-1985; The seventh five-year plan period (cited as seventh-five period), 1986-1990; The eighth five-year plan period (cited as eighth-five period), 1991-1995.

**State-owned Economic Units** refer to various enterprises, institutions, and government administrative organizations at various levels, social organizations and etc. with state ownership of production means.

**Collective-owned Economic Units** refer to various enterprises and institutions with collective ownership of production means, including various rural economic organizations engaging in agriculture, forestry, husbandry, sideline production, and fishing, enterprises and institutions run by townships and villages; collective enterprises and institutions run by cities, counties, towns, and street committees.

**Private-owned Economic Units** refer to economic units owned by private individuals, including individual owned private enterprises, jointly owned private enterprises, and private owned cooperation limited.

**Joint Ownership Units** refer to economic entities jointly invested by enterprises of different ownerships or by enterprises and institutions, and the partnerships among the joint ownership units can be close, half close, or loose.

**Share Holding Economic Units** refer to enterprises invested in the form of share holding with its investment by all the share holders, which mainly include limited companies and limited-liability companies.

**Foreign Owned Economic Units** refer to enterprises established by foreigners in the territory of mainland China according to related economic laws and regulations of the People's Republic of China as joint venture, cooperative cooperation, or sole investment, including joint ventures, joint cooperation enterprises, and foreign enterprises.

**Economic Units Owned by Overseas Chinese from Hong Kong, Macao, and Taiwan** refer to enterprises established by overseas Chinese from Hong Kong, Macao, and Taiwan in the territory of mainland China according to related economic laws and regulations of the People's Republic of China as joint venture, cooperative cooperation, and sole investment, including joint ventures, joint cooperation enterprises, and foreign enterprises.

**Three Industries** industry structure has been classified according to the historical sequence of development. Primary industry refers to extraction of natural resources; secondary industry involves processing of primary products; and tertiary industry provides services of various kinds for production and consumption. The above classification is universal although it varies to some extent from country to country. Industry in China comprises:

Primary industry: Agriculture (including farming, forestry, husbandry, sideline production, and fishing).

Secondary industry: industry (including mining, manufacture, water supply, electricity generation and supply, steam, hot water, gas) and construction.

Tertiary industry: all other industries not included in primary or secondary industry.

Due to the fact that tertiary industry involves in a large variety of industries in China, it is divided into two sectors: circulation sector and service sector and further into four levels:

The first level: circulation sector, including transportation, postal service and communication, commerce, catering, material supply and distribution, and storage.

The second level: service sector providing service for production and consumption, including banking, insurance, geological survey, real estates, public utilities, service for residents, consultancy service, and comprehensive technical services, and service for agriculture, forestry, husbandry, fishing, water conservancy, and maintenance of roads, internal water ways, etc.

The third level: service for improving education and cultural life of people, including education, culture, broadcasting, television, research of science, health, sports, and social welfare, etc.

The fourth level: sector providing service for public needs, including government agencies, political and party institutions, social organizations, armies, and policemen.

## 主要统计指标解释

**人口数** 指一定时点、一定地区范围内的有生命的个人的总和。

年度统计的年末人口数是指每年12月31日24时的人口数。年度统计的全国人口总数内未包括台湾省和港澳同胞以及海外华侨人数。

**市镇总人口和乡村总人口** 一般是按常住人口划分的。

**市镇总人口** 指市、镇辖区的全部人口。

**乡村总人口** 指县(不含镇)的全部人口。

**市** 是指经国家批准成立“市”建制的城市。

**镇** 是指经省、自治区、直辖市批准的镇。1963年以前为常住人口在2000人以上,非农业人口占50%以上的。1964年起改为常住人口在3000人以上,非农业人口占70%以上,或常住人口在2500人以上,不满3000人,非农业人口占85%以上的。1984年后又调整为,凡县级地方国家机关所在地;或总人口在20000人以下的乡,乡政府驻地非农业人口超过2000人的;或总人口在20000人以上的乡,乡政府驻地非农业人口占全乡人口10%以上;或少数民族地区、人口稀少的边远地区、山区和小型工矿区、小港口、风景旅游、边境口岸等地,非农业人口虽不足2000人,都可建镇。

**出生率(又称粗出生率)** 指在一定时期内(通常为一年)平均每千人所出生的人数的比率,一般用千分率表示。计算公式:

$$\text{出生率} = \frac{\text{年出生人数}}{\text{年平均人数}} \times 1000\%$$

出生人数是指活产婴儿,即胎儿脱离母体时(不管怀孕月数),有过呼吸或其他生命现象。

年平均人数是年初、年底人口数的平均数,也可用年中人口数代替。

**死亡率(又称粗死亡率)** 指在一定时期内(通常为一年)一定地区的死亡人数与同期平均人数(或期中人数)之比,一般用千分率表示。计算公式:

$$\text{死亡率} = \frac{\text{年死亡人数}}{\text{年平均人数}} \times 1000\%$$

**人口自然增长率** 指在一定时期内(通常为一年)人口自然增加数(出生人数减死亡人数)与该时期内平均人数(或期中人数)之比,一般用千分率表示。计算公式:

$$\text{人口自然增长率} = \frac{\text{本年出生人数} - \text{本年死亡人数}}{\text{年平均人数}} \times 1000\%$$

$$\text{人口自然增长率} = \text{人口出生率} - \text{人口死亡率}$$

**在业人口(又称就业人口)** 指十五周岁及十五周岁以上人口中从事一定的社会劳动并取得劳动报酬或经营收入的人口。

**不在业人口** 指十五周岁及十五周岁以上人口中未从事社会劳动的人口。包括:在校学生、料理家务、待升学、市镇待业、离退休、退职、丧失劳动能力等非在业人口。

**社会负担系数** 指社会劳动人口与被抚养人口的比例。计算公式:

$$\text{社会负担系数} = \frac{\text{被抚养人口}}{\text{劳动人口}} \times 100\%$$

**老年负担系数** 指社会劳动人口与老年人口的比例。计算公式:

$$\text{老年负担系数} = \frac{\text{老年人口}}{\text{劳动人口}} \times 100\%$$

**少年负担系数** 指社会劳动人口与少年儿童的比例。计算公式：

$$\text{少年负担系数} = \frac{\text{少年儿童人口}}{\text{劳动人口}} \times 100\%$$

## Explanatory Notes for Major Indicators

**Total Population** refers to the total number of people alive at a certain point of time within a given area.

The annual statistics on total population is taken at midnight, the 31st of December, not including residents in Taiwan province, Chinese compatriots in Hong Kong and Macao and overseas Chinese.

**Urban Population and Rural Population** are categorized, in general, by the permanent residence of the population.

**Urban Population** refers to the population living in areas under the administration of city or town.

**Rural Population** refers to the population of counties excluding those living in towns of a county.

**City** refers to cities established with the approval of the central government.

**Town** refers to towns established with the approval of the governments of province, autonomous region, or municipality directly under the central government. Prior to 1963, a town was defined when it consisted of more than 2000 permanent residents, of which 50% or more were considered non-agricultural population; since 1964, the number of permanent residents for a town was raised to 3000, and the percentage of non-agricultural population to 70% or 2500 permanent residents with 85% of non-agricultural population. Further adjustment was made in 1984: a town is defined if the area is the location of county level government agency, or when the area has a population of below 20000 with 2000 non-agricultural population, or when the area has a population of more than 20000 with 10% or more of non-agricultural population, or when it is a remote area, mountainous area, small-size mining area, small harbor, tourism area, or border area with non-agricultural population of below 2000.

**Birth Rate (or Crude Birth Rate)** refers to the ratio of number of births to the average population during a certain period of time (usually a year), which is often presented as ‰. The following formula is used:

$$\text{Birth Rate} = \frac{\text{Number of Births}}{\text{Average Number of Population}} \times 1000\text{‰}$$

Number of Births refers to live births, i. e. for births when babies had showed any vital phenomena regardless of the length of pregnancy.

Average Number of Population is the average of the number of population at the beginning of the year and the end of the year and sometimes is substituted for with mid-year population.

**Death Rate (or Crude Death Rate)** refers to the ratio of number of deaths to the average population (or mid-year population) during a certain period of time (usually a year), which is often presented as ‰. The following formula is used:

$$\text{Death Rate} = \frac{\text{Number of Deaths}}{\text{Average Number of Population}} \times 1000\text{‰}$$

**Natural Growth Rate of Population** refers to the ratio of natural increase in population (number of births minus number of deaths) in a certain period of time (usually a year) to the average population (or mid-year population) of the same period, which is often presented as ‰. The following formulae are applied:

$$\text{Natural Growth of Population} = \frac{\text{Number of Births} - \text{Number of Deaths}}{\text{Average Number of Population}} \times 1000‰$$

$$\text{Natural Growth Rate of Population} = \text{Birth Rate} - \text{Death Rate}$$

**Employed Population** refers to population of 15 or above engaging in social labor which generates income.

**Unemployed Population** refers to population of 15 or above not engaging in any social labor which generates income, including students enrolled in schools, house labors, students waiting for entering higher level of education, urban job seekers, retirees, job quitters, disabled, etc.

**Social Dependency Ratio** refers to the ratio of number of dependents to total social labor, which is calculated as follows:

$$\text{Social Dependency Ratio} = \frac{\text{Number of Dependents}}{\text{Total Social Labor}} \times 100\%$$

**Dependency Ratio of the Aged** refers to the ratio of the number of the aged population to the total social labor, which is calculated as follows:

$$\text{Dependency Ratio of the Aged} = \frac{\text{Number of the Aged Population}}{\text{Total Social Labor}} \times 100\%$$

**Dependency Ratio of the Young Population** refers to the ratio of the number of the young population to the total social labor, which is calculated as follows:

$$\text{Dependency Ratio of the Young Population} = \frac{\text{Number of the Young Population}}{\text{Total Social Labor}} \times 100\%$$

## 主要指标解释

**全社会固定资产投资** 固定资产投资是社会固定资产再生产的主要手段。通过建造和购置固定资产的活动，国民经济不断采用先进技术装备，建立新兴部门，进一步调整经济结构和生产力的地区分布，增强经济实力，为改善人民物质文化生活创造物质条件。这对我国的社会主义现代化建设具有重要意义。

固定资产投资额是以货币表现的建造和购置固定资产活动的工作量，它是反映固定资产投资规模、速度、比例关系和使用方向的综合性指标。全社会固定资产投资包括国有经济单位投资、城乡集体经济单位投资、各种经济类型的单位投资和城乡居民个人投资。按照我国现行计划管理体制，国有经济单位固定资产投资总额分为基本建设、更新改造、商品房屋建设投资和其他固定资产投资四个部分；城乡集体经济单位投资包括城镇集体所有制单位投资和农村集体所有制单位投资；各种经济类型的单位投资包括联营经济、股份制经济、中外合资经营、中外合作经营、外资、与大陆合资经营、与大陆合作经营、港澳台独资及其他经济类型的单位投资。城镇居民个人投资包括城市、县城、镇、工矿区所辖范围内的个人建房和农村个人建房及购买生产性固定资产的投资。

**基本建设投资** 基本建设是国有企业、事业单位以扩大生产能力或工程效益为主要目的的新建、扩建工程及有关工作。包括工厂、矿山、铁路、桥梁、港口、农田水利、商店、住宅、学校、医院等工程的建造和机器设备、车辆、船舶、飞机等的购置。

基本建设投资额是以货币表现的基本建设完成的工作量，是反映一定时期内基本建设规模和建设进度的综合性指标。它是根据工程的实际进度按预算价格（预算价格是编制施工图预算时所用的价格）计算的工作量，没有形成工程实体的建筑材料和没有开始安装的设备，都不计算投资完成额。

**更新改造投资** 更新改造是指国有企业、事业单位对原有设施进行固定资产更新和技术改造，以及相应配套的工程和有关工作（不包括大修理和维护工程）。更新改造投资是以货币表现的更新改造完成的工作量。根据我国现行统计制度，基本建设和更新改造的划分是：（1）列入基本建设计划的项目作为基本建设投资，列入更新改造计划的项目作为更新改造投资；（2）更新改造计划与基本建设计划结合安排的项目及未列入计划的项目，根据工程性质为别作为基本建设投资或更新改造投资。属于对企业、事业单位原有设施进行技术改造或更新的项目和增建主要生产车间、分厂等，其新增生产能力或效益尚未达到大中型标准的项目，以及由于城市环境保护和安全生产的需要而进行的迁建工程，作为更新改造投资。

**其他固定资产投资** 是指按照国家规定不纳入基本建设和更新改造计划管理，其总投资在五万元以上的固定资产投资。具体包括：国有经济单位用油田维护费和石油开发基金进行的油田维护和开发工程；煤炭、铁矿、森林工业等采掘采伐业用维简费进行的开拓延伸工程；交通部门用公路养路费对原有公路、桥梁进行改建的工程；商业部门用简易建筑费建造的仓库工程。

**固定资产投资的资金来源** 根据固定资产投资的资金来源不同，分为上年末结余资金、本年资金来源小计和各项应付款。其中本年资金来源小计又分为国家预算内资金、国内贷款、股票、债券、利用外资、自筹资金和其他资金来源七种：

（1）**国家预算内资金** 指国家预算、地方财政、主管部门和国家专业投资公司拨给或委托银行贷款给建设单位的基本建设拨款和中央基本建设基金，拨给企业单位的更新改造拨款，以及中央财政安排的专项拨款中用于基本建设的资金。

（2）**国内贷款** 指报告期企、事业单位向银行及非银行金融机构借入的用于固定资产投资的各种国内借款。国内贷款包括：银行利用自有资金及吸收的存款发放的贷款、上级主管部门拨入的国内贷款、国家专项贷款（包括煤代油贷款、劳改煤矿专项贷款等），地方财政专项资金安排的贷款、国内储备贷款、周转贷款等。

（3）**股票** 是股份制企业通过发行股票筹集到的，用于固定资产投资的资金。

(4)债券 是企业(公司)或金融机构通过发行各种债券筹集到的用于固定资产投资的资金,包括由银行代理国家专业投资公司发行的重点企业债券和重点建设债券。

(5)利用外资 指报告期收到的用于固定资产投资的国外资金,包括统借统还、自借自还的国外贷款,中外合资项目中的外资,以及无偿捐赠等。其中,国家统借统还的外资,是指由我国政府出面同外国政府、团体或金融组织签订贷款协议、并负责偿还本息的外国贷款。

(6)自筹资金 指建设单位报告期收到的,用于进行固定资产投资的上级主管部门、地方和本单位自筹资金。

(7)其他资金来源 指报告期收到的除以上各种拨款、借款、自筹资金之外,其他用于固定资产投资的资金。

**固定资产投资按国民经济行业分** 建设项目归哪个行业,按其建成投产后的主要产品或主要用途及社会经济活动性质来确定。基本建设按建设项目划分国民经济行业,更新改造、国有经济单位其他固定资产投资及城镇集体投资根据整个企业、事业单位所属的行业来划分。一般情况下,一个建设项目或一个企业、事业单位只能属于一种国民经济行业。为了更准确地反映国民经济各行业之间的比例关系,联合企业(总厂)所属分厂属于不同行业的,原则上按分厂划分行业。

**固定资产投资按建设性质分** 建设项目的性质一般分为新建、扩建、改建、迁建、恢复。基本建设按建设项目划分建设性质,更新改造、国民经济单位其他固定资产投资及城镇集体投资按整个企业、事业单位的建设情况确定建设性质。目前基本建设和更新改造是根据我国现行的计划管理体制区分的,所以基本建设和更新改造都可以分别按新建、扩建等划分。

(1)新建 一般是指从无到有、“平地起家”新开始建设单位。有的单位原有的基础很小,经过建设后其新增加的固定资产价值超过原有固定资产价值(原值)三倍以上的也算新建。

(2)扩建 一般是指为扩大原有产品的生产能力,在厂内或其他地点增建主要生产车间(或主要工程)、独立的生产线或总厂之下的分厂的企业;事业单位和行政单位在原单位增建业务用房(如学校增建教学用房、医院增建门诊部或病床用房,行政机关增建办公楼等)也作为扩建。

(3)改建 一般是指现有企业、事业单位为了技术进步,提高产品质量,增加花色品种,促进产品升级换代、降低消耗和成本,加强资源综合利用和三废治理、劳保安全等,采用新技术、新工艺、新设备、新材料等对现有设施、工艺条件进行技术改造或更新(包括相应配套的辅助性生产、生活福利设施)。有的企业为充分发挥现有生产能力,进行填平补齐而增建不增加本单位主要产品生产能力的车间等,也属于改建。

**固定资产投资按用途分** 固定资产投资按工程的经济用途分为用于第一产业、第二产业、第三产业和住宅四部分的建设,是研究不同用途的固定资产投资之间比例关系的重要指标。基本建设投产、国有经济单位其他固定资产投资及城镇集体投资的用途按单项工程确定,现有企业、事业单位更新改造投资的用途按更新改造项目确定。

**固定资产投资按构成分** 固定资产投资活动按其工作内容和实现方式分为建筑安装工程,设备、工具、器具购置,其他费用三个部分。

(1)建筑安装工程(建筑工作量) 指各种房屋、建筑物的建造工程和各种设备、装置的安装工程。包括各种房屋建筑工程;各种用途设备基础和各种工业窑炉的砌筑工程;为施工而进行的各种准备工作和临时工程以及完工后的清理工作等;铁路、道路的铺设,矿井的开凿及石油管道的架设等;水利工程;防空地下建筑等特殊工程;以及各种机械设备的安装工程;为测定安装工程质量,对设备进行的试行工作。在安装工程中,不包括被安装设备本身的价值。

(2)设备、工具、器具购置 指购置或自制达到固定资产标准的设备、工具、器具的价值,固定资产的标准按财务部门规定。新建单位、扩建单位的新建车间按照设计和计划要求购置或自制的全部设备、工具、器具,不论是否达到固定资产标准均计入“设备、工具、器具购置”中。

(3)其他费用 指除建筑安装工程和设备、工具、器具购置以外的投资完成额。它包括两种性质的费用,一种是属于增加固定资产的费用,主要有:建设单位管理费,土地、青苗等补偿费和安置补助费、勘察设计费,研究实验费、农林单位牲畜购置费、各种经济林木的营造费、办公和生活家具、器具购置费、引进技术和进口设备项目的其他费用、联合试运转费等;一种是属于不增加固定资产的费用,主要有:施工机械转移费、生产职工培训费、农业开荒费用及报废工程损失费等。

**基本建设项目按大中小型划分** 基本建设划分大中小型项目原则上应按照上级批准的设计任务书或初步设

计所确定的总规模或总投资划分,没有正式批准设计任务书或初步设计的,按国家或省、自治区、直辖市年度基本建设投资计划中所列的总规模或总投资划分。上述两条均不具备的,按本年计划施工工程的建设总规模或总投资划分。生产单一产品的工业项目,按产品的设计能力划分;生产多种产品的工业项目,按其主要产品的设计能力划分。品种繁多,难以按生产能力划分的,按全部计划投资额划分。划分标准以国家颁发的《大中小型建设项目划分标准》依据。国家曾在1958年、1962年、1977年和1979年先后五次修订《大中小型建设项目划分标准》,因此各历史时期的大中型项目数不完全可比。

**施工项目** 指报告期内曾进行建筑或安装工程施工活动的建设项目。包括报告期内新开工项目、报告期以前开工跨入报告期继续施工的项目以及报告期施过工并在报告期内全部建设投产或停缓建的项目。

**全部建成投产项目** 工业项目是指设计文件规定形成生产能力的主体工程及其相应配套的辅助设施全部建成,经负荷试运转,证明具备生产设计规定合格产品的条件,并经过验收鉴定合格或达到竣工验收标准,与生产性工程配套的生产福利设施可以满足近期正常生产的需要,正式移交生产的建设项目。非工业项目是指设计文件规定的主体工程和相应的配套工程全部建成,能够发挥设计规定的全部效益,经验收鉴定合格或达到竣工验收标准,正式移交使用的建设项目。

**新增生产能力** 指通过固定资产投资活动而增加的设计能力或工程效益,它是用实物形态表示的固定资产投资的成果。新增生产能力的计算,是以能独立发挥生产能力或效益的单项工程(或项目)为对象。当单项工程(或项目)建成,经有关部门鉴定合格,正式移交投入生产,即可计算新增生产能力。

新增生产能力或工程效益有以下几种表现形式;

(1)以建设项目或单项工程建成后的年生产能力表示。如煤炭开采、石油开采等。

(2)以建设项目或单项工程建成后处理原料的能力表示。如选矿工程的年处理矿石能力,洗煤厂年洗原煤能力等。

(3)以新增的主要设备数量或容量表示。如棉纺锭枚数、发电机组容量等。

(4)以建筑物容积、容量、面积或长度表示。如水库容量、铁路公路里程等。

新增生产能力的数量一般按设计能力计算。设计能力是指设计文件中规定的在正常情况下能够达到的生产能力,而不论投产后的实际产量如何。以设备数量、建筑物容积、面积、长度等表示的新增生产能力(或效益),则按建成的实际数量计算。

**施工和竣工房屋建筑面积** 房屋建筑面积是从房屋外墙线算起的各层平面面积的总和,包括房屋结构(如柱、墙)占用的面积和地下室面积。多层建筑按各自然层面积总和计算,包括房屋内的楼隔层,突出墙面的眺望间、门斗、有柱雨罩的面积。不包括突出墙面结构的构件、艺术装饰等所占的面积,如台阶等。凹阳台、挑阳台按其水平投影面积一半计算建筑面积。

**竣工面积** 指在报告期内房屋建筑按照设计要求已全部完工,达到住人和使用条件,经验收鉴定合格,正式移交使用单位的建筑面积。

**房屋建筑面积竣工率** 指一定时期内房屋竣工面积占同期房屋施工面积的比率。它是从房屋建筑施工速度的角度反映投资效果和建筑业经济效益的指标。

**新增固定资产** 指通过投资活动所形成的新的固定资产价值。包括已经建成投入生产或交付使用的工程价值和达到固定资产标准的设备、工具、器具的价值及有关应摊入的费用。它是以价值形式表示的固定资产投资成果的综合指标,可以综合反映不同时期、不同部门、不同地区的固定资产投资成果。

**建设项目投资率** 指一定时期内全部建成投入生产项目个数占同期正式施工项目个数的比率。它是从项目建设速度的角度反映投资效果的指标。

**固定资产交付使用率** 指一定时期新增固定资产与同期完成投资额的比率。它是反映各个时期固定资产动用速度,衡量建设过程中投资效果的一个综合性指标。

**未完工程占用率** 指年末未完工程累计完成投资额占全年实际完成投资额的比率。它反映未完工程的相对规模,并可从资金占用的角度反映固定资产投资效果。由于未完工程是指已经开工,但尚未建成交付使用的工程,有个跨年度问题,因此未完工程占用率会出现大于1的情况。

## Explanatory Notes for Major Indicators

**Total Investment in Fixed Assets** Investment in fixed assets is major means for social reproduction of fixed assets. In the process of capital construction and technical updating and transformation, more advanced technologies and new equipments are adopted and new sectors are established, which promote the economic structure, production regional layout and productivity to improve people's livelihood and speeded up the drive of four socialist modernization.

Value of investment in fixed assets refers to construction and purchase of fixed assets in money terms, which reflects the size, pace, structure, and utilization of investment in fixed assets. Total investment in fixed assets includes investment by state-owned units, urban and rural collective units, and units of various other kinds of ownership and individual investment by urban and rural residents. According to China's current planning and management system, investment by state-owned units includes four parts, i. e. investment in capital construction, technical upgrading and transformation, construction of commercial building and residence, and others. Investment by units of various other kinds of ownership refers to investment by enterprises and institutes of joint ownership, share holding, foreign ownership, ownership by overseas Chinese from Hong Kong, Macao, and Taiwan and other ownership. Individual investment by urban and rural residents includes investment in personal house building and purchase of fixed assets for production purpose in areas under administration of city, county, town, and special mining zone and in rural areas.

**Capital Construction Investment** refers to investment in new projects or an addition to existing facilities for the purposes of enlarging production capacity or improving efficiency, which includes construction of plants, mines, railways, bridges, harbors, water conservation facilities, stores, residential facilities, schools, hospitals, and purchase of machinery and equipment, vehicles, ships, and planes.

Value of Construction Investment refers to completion of capital construction in money terms, which reflects the size and progress of capital construction during a certain period of time. It is calculated at budget prices according to the actual completion of the project and therefore, construction materials and equipment not put into operation are not included.

**Technical Updating and Transformation** refers to the investment in projects to renew, modernize or replace existing assets and related supplementary projects (excluding major repairs and maintenance projects), which is presented in money terms. According to China's current statistical system, the division between capital construction investment and technical updating and transformation is as follows: (1) projects which are listed in capital construction plan are identified as capital construction investment; projects which are listed in technical updating and transformation plan are identified as technical updating and transformation investment; (2) projects which are involved in both capital construction and technical updating and transformation or not listed in specific plan are identified as either capital construction or technical updating and transformation according to the nature of the projects. Projects for the purpose of renewing or transforming existing assets of enterprises and institutions and construction of major workshops or accessory plant and projects for the purposes of environmental protection and safety in production are considered as technical updating and transformation if the capacity or profitability of those projects have not reached the standards of large or medium size.

**Other Investment in Fixed Assets** refers to investment in fixed assets by state-owned units and valued above

50,000 yuan which are not included in capital construction and technical updating and transformation according to the state regulations, including oil field development projects using special oil-field development funds, development and expansion projects of mining and forestry department using maintenance funds, road and bridge construction project using road tolls, warehouse construction of commerce department using simple construction funds, investment in fixed assets by urban collective units construction and purchase by units of joint ownership, share holding ownership, foreign ownership, and overseas Chinese from Hong Kong, Macao, and Taiwan and investment in real estate development and construction of commercial residential houses.

**Sources of Finance for Investment in Fixed Assets** are classified as fund unsettled from previous year, state appropriation, loans, and various payable funds. Of Which state appropriation and loans are further divided into seven categories, i. e. state budgetary appropriation, domestic loans, stocks, bonds, foreign investment, self-raised funds, and others:

(1) State budgetary appropriation includes funds appropriated or entrusted to banks by state budget, local finance, responsible institutes to construction enterprises and appropriation by central government for the purpose to capital construction and technical updating and transformation, and special funds arranged by central government for capital construction.

(2) Domestic loan refers to funds borrowed by enterprises and institutions during reference period for the purpose of domestic investment in fixed assets. Domestic loan includes loans issued by banks from sources of self-owned funds and deposit funds, loans appropriated by responsible institutes, special loans by government (including loan for coal replacing oil, special loan for reform-through-labor mining enterprises), loans arranged by local government, domestic reserve loan, and working loan, etc.

(3) Stock refers to funds for investment in fixed assets raised by share holding enterprises through issuing stocks.

(4) Bonds refers to funds for investment in fixed assets raised by enterprises (companies) or financial institutions through issuing various bonds, which includes Key Enterprise Bonds and Key Construction Program Bonds issued by the Banks on behalf of state-owned investing companies.

(5) Utilization of Foreign Capital refers to foreign funds received during the reference period for investment in fixed assets, including foreign funds borrowed and managed by the government, by individual units, foreign fund in joint venture program, and grants and donations, etc., of which foreign funds borrowed and managed by the government refer to foreign loan borrowed by the government from foreign governments, organizations, or financial institutions under official agreements signed by both parties and the government is responsible for repayment of both the principle and interests of the foreign loans.

(6) Self-raised funds refers to funds received by construction enterprises from their responsible institutes, local governments, and within enterprises for the purpose of investment in fixed assets during reference period.

(7) Others refers to funds received during reference period which are not included above.

**Investment in Fixed Assets by Branch of Industry** classification of construction projects are determined by major products of those projects or the purpose of the projects, and the nature of their social economic activities. Investment in capital construction are classified by construction of projects, while investment in technical updating and transformation, other investment by state owned units and urban collective units are classified according to

the branch of industry of enterprises or institutions which they belong to. In general, one project or one enterprise or institution can only belong to one branch of industry. In order to reflect more accurately the proportions of various industries, branch factories which differ from their general factory in classification of industry are classified according to their economic activities.

**Investment in Fixed Assets by Type of Construction** in general can be divided into three categories as new construction, expansion, transformation, replacement. Capital construction projects are classified according to the purposes of construction and investment in technical updating and transformation and other fixed assets are identified by the general types of construction. The current distinction between capital construction and technical updating and transformation are determined by China's current planning and management system, which are divided into new construction, expansion, etc. respectively.

(1) New construction in general refers to newly constructed units. In the case in which value of newly added fixed assets exceeds the original ones by three times expansion construction is considered as new construction.

(2) Expansion refers to construction for increasing original product capacity, new major production workshop within factories or other locations, independent production line, or branch factory under major factory. Newly constructed business houses for institutions and administrative organizations (such as school buildings, clinics or beds in hospitals, and office buildings, etc.) are classified as expansion.

(3) Transformation refers to technical updating and transformation to existing equipments and technical conditions undertaken by enterprises and institutions for the purposes of technology advancement, improvement in product quality, enlarging variety of products, promoting new generation of products, reducing production consumption and cost, promoting comprehensive utilization of resources, strengthening treatment of wasted water, air, and solids, and safety in production, etc. through new technologies and techniques, and new materials (including accessory production and living and welfare facilities). Construction of new workshops for improving existing production capacity rather than increasing production capacity is considered as transformation.

**Investment in Fixed Assets by Function** can be classified into four parts, i. e. construction for primary industry, secondary industry, tertiary industry, and residential houses, which reflects important proportions of investment among different industries. Capital construction investment, other investment in fixed assets by state-owned units and urban collective unit are classified according to individual projects. Investment in technical updating and transformation by enterprises and institutions are classified by relevant projects.

**Investment in Fixed Assets by Structure** refers three major parts of investment activities, i. e. construction and installation, purchase of equipments and instruments, and other expenses.

(1) Construction and installation (workload of construction) refers to construction projects of various houses and buildings and installation of various equipments and instruments, including construction of various houses, equipment foundations and industrial kiln stoves, preparation works for project construction, and clearing up works post project construction pavement of railways and roads, drilling of mines and construction of oil pipes, water conservancy, air defence underground constructions and other special projects, installation of various machinery equipments, testing operation for pretesting the quality of installation projects. The value of equipments installed in installation projects is not considered.

(2) Purchase of equipments and instruments refers to total value of equipments, tools, and vessels purchased

or self-produced which come up to standards for fixed assets. Equipments, tools and vessels purchased or self-produced for new workshops by newly established or expanded units are categorized as "purchase of equipments and instruments" regardless of standards for fixed assets.

(3) Other expenses refers to investment completed which are not included above. This category consists of two types of expenses: one increases fixed assets, including administration expenses of construction units, compensation for land and plants, compensation for moving, and expenses on geological survey and designing, research and testing, purchase of animals by agricultural and forestry units, planting and operating of various cash forests, office and residence furniture, purchase of instruments and vessels, introduction of technology and imports of equipments, and joint pretesting of projects; the other does not increase fixed assets, including expense on transportation of construction machineries, training for workers and staff, opening up agricultural land, and loss of discarded projects.

**Capital Construction Projects by Size** The division of size of capital construction projects should be determined according to approved construction plan by responsible institutes or tentative size of investment, otherwise according to current capital construction plan of the state, provinces, autonomous regions, and cities under central government. Industrial projects which produce unitary products are classified according to its planing capacity of products; projects which produce multi products are classified by total planned investment. Standards for Division of Sizes of Construction Projects issued by the government is the base for size division of construction projects, which was revised in 1958, 1962, 1977, and 1979 respectively and therefore, data on projects by sized are not comparable from year to year.

**Projects under Construction** refers to projects having construction and installation activities undertaken in reference period, including projects started in reference period, continued from last period, and completed and put into production or suspended in reference period.

**Projects Completed** Completed industrial projects refers to major projects completed which have formulated production capacity and been checked and accepted and accessory facilities completed which ensure normal production. Non-industrial projects refers to major projects and accessory facilities completed which possess the capacity designed and been checked and accepted.

**Newly Increased Production Capacity** refers to increase of designed capacity and project efficiency through investment in fixed assets, which reflects the accomplishment of investment in fixed assets in kind. The calculation of newly increased production capacity is based on individual projects which operate independently. When an individual project is completed and checked and accepted and put into production, it is counted as newly increased production capacity.

Several forms of presenting newly increased production capacity and project efficiency are often applied as follows:

- (1) Annual production capacity, such as extraction of coal and oil;
- (2) Raw material processing capacity, such as ore processing capacity of ore dressing projects;
- (3) Number or volume of major equipments increased, such as number of cotton spindles increased and capacity of electricity generating sets increased;
- (4) Physical measures of construction as volume, capacity, area, and length, for instance, capacity of reservoirs, length of railways or roads.

Quantity of newly increased production capacity is calculated by designed capacity in general, which refers to the production capacity a project can come up to under normal conditions designed in construction documents regardless of actual output.

**Floor Space of Buildings under Construction and Completed** refers to total area of floor space in each story of buildings calculated from the outside line of building walls, including area occupied by constructions like pillars or walls and basements. Area of multi-story building is calculated count total floor space of each story, including area occupied by separating walls, watching rooms, doorways, and pillars, but excluding protruding wall structures, artistic decoration, etc. (for example, stairs). Area of caved in balcony protruding balcony is counted by half of projection floor space.

**Floor Space of Buildings Completed** refers to construction area which are completed in reference period, have come up to designed standards and put into utilization.

**Completion Rate of Floor Space of Buildings Completed** refers to the ratio of area of floor space of buildings completed in certain period of time to area of floor space of buildings under construction in the same period, which reflects investment efficiency and development of construction industry through speed of project construction.

**Newly Increased Fixed Assets** refers to increase in value of fixed assets through investment, including projects completed and put into production, and equipments, tools, and vessels considered as fixed assets, and relevant expenses as investment in fixed assets, which is a comprehensive indicator of investment in fixed assets, reflecting the accomplishment of investment in fixed assets in different periods, different sectors, and different regions.

**Rate of Construction Projects Completed** refers to ratio of number of construction projects completed in certain period of time to number of projects under construction in the same period, which reflects investment efficiency through speed of projects construction.

**Rate of Projects of Fixed Assets Completed and Put into Operation** refers to ratio of newly increased fixed assets to total investment completed in the same period, which is a comprehensive indicator, reflecting the employment of fixed assets investment and investment efficiency.

**Rate of Investment in Projects Uncompleted** refers to ratio of accumulated investment in projects uncompleted to total annual investment in projects completed, which reflects the relative size of projects uncompleted and efficiency of fixed assets investment through the aspect of fund utilization. Since projects uncompleted refer to projects started but not completed, so they go beyond one year often times and therefore, the above ratio could be greater than one.

## 主要统计指标解释

**能源生产总量** 指一定时期内全国(地区)一次能源生产量的总和,是观察全国(地区)能源生产水平、规模、构成和发展速度的总量指标。一次能源生产量包括原煤、原油、天然气、水电及其他动力能(如风能、地热能等)发电量。不包括低热值燃料生产量、生物质能、太阳能等的利用和由一次能源加工转换而成的二次能源产量。

**能源消费总量** 指一定时期内全国(地区)物质生产部门、非物质生产部门和生活消费的各种能源的总和,是观察能源消费水平、构成和增长速度的总量指标。能源消费总量包括原煤和原油及其制品、天然气、电力。不包括低热值燃料、生物质能和太阳能等的利用。能源消费总量分为三部分,即终端能源消费量、能源加工转换损失量和损失量。

(1)**终端能源消费量** 指一定时期内全国(地区)物质生产部门、非物质生产部门和生活消费的各种能源在扣除了用于加工转换二次能源消费量和损失量以后的数量。

(2)**能源加工转换损失量** 指一定时期内全国(地区)投入加工转换的各种能源数量之和与产出各种能源产品之和的差额。它是观察能源在加工转换过程中损失量变化的指标。

(3)**能源损失量** 指一定时期内能源在输送、分配、储存过程中发生的损失和由客观原因造成的各种损失量。不包括各种气体能源放空、放散量。

**能源生产弹性系数** 是研究能源生产量的增长与国民经济增长之间关系的指标。计算公式:

$$\text{能源生产弹性系数} = \frac{\text{能源生产总量年平均增长速度}}{\text{国民经济年平均增长速度}}$$

国民经济年平均增长速度,可根据不同的目的或需要,用国民生产总值,国民收入等指标来计算,本资料是采用国民生产总值指标计算的。

**电力生产弹性系数** 是研究电力生产量的增长与国民经济增长之间关系的指标。一般来说,电力的发展应当快于国民经济的发展,也就是说电力应超前发展。计算公式:

$$\text{电力生产弹性系数} = \frac{\text{电力生产量年平均增长速度}}{\text{国民经济年平均增长速度}}$$

**能源消费弹性系数** 是反映能源消费增长速度与国民经济增长速度之间比例关系的指标。计算公式:

$$\text{能源消费弹性系数} = \frac{\text{能源消费量年平均增长速度}}{\text{国民经济年平均增长速度}}$$

**电力消费弹性系数** 是反映电力消费增长速度与国民经济增长速度之间比例关系的指标。计算公式:

$$\text{电力消费弹性系数} = \frac{\text{电力消费量年平均增长速度}}{\text{国民经济年平均增长速度}}$$

**能源加工转换效率** 指一定时期内能源经过加工转换后,产出的各种能源产品的数量与同期内投入加工转换的各种能源数量的比率。它是观察能源加工转换装置和生产工艺先进与落后、管理水平高低等的重要指标。计算公式:

$$\text{能源加工转换效率} = \frac{\text{加工转换产出量}}{\text{加工转换投入量}} \times 100\%$$

**新增物资资源** 指一定时期内某种物资的资源总量,主要包括本期的生产量和进口量。

生产量是指某种物资的本期国内生产量。

进口量是指某种物资的本期海关进口量。

**主要物资国内消费量** 指一定时期内生产、建设单位实际消耗某种物资的数量,包括生产消费量和基本建设消费量。它是观察某种物资的消费规模、水平、构成的总量指标。

国内消费的统计原则是:谁消费谁统计。其核算方法是:物资投入生产、建设的第一道工序后,改变了原来的形态、性能,或已构成了工程实体,即作消费量统计。

**生产消费量** 指一定时期内生产企业、事业单位实际消耗某种物资的数量,主要包括产品生产消费、经营维修消费和更新改造措施消费。

产品生产消费是指直接用于产品生产过程中的工艺性消耗和构成新产品实体的消耗数量。

经营维修消费是指生产企业、事业单位对生产性、非生产性的固定资产、设备等的维护修理以及经营管理部门等的用料。

更新改造措施消费是指以内涵性扩大再生产为主要目的,对现有企业、事业单位原有设施进行技术(改造包括固定资产更新)以及相应配套的辅助性生产、生活福利设施等工程和有关工作用料。不包括建筑安装企业承包的更新改造措施工程用料。这一部分包括在“基本建设消费量”中。

**基本建设消费量** 指一定时期内从事基本建设活动的建设单位、施工单位、地质勘探单位在基本建设工程、更新改造措施工程、预制构件等方面实际消耗某种物资的数量,包括基本建设消费和更新改造措施消费。

基本建设消费是指以外延性扩大再生产为主要目的的新建、扩建工程及有关工作用料。

更新改造措施消费专指建筑安装企业承包的更新改造措施工程用料和建安企业自身的更新改造措施用料。

**工业产品库存量** 指乡及乡以上独立核算的工业企业在某一时点实际结存的合格产品的数量。包括:本单位仓库所存的产品;采用送货方式销售已运往车站、码头,还没有办妥托运手续的产品;因需修理暂时出库返修(不办理出入库手续)的产品。不包括:已产出但尚未验收入库的产品;采取提货方式销售已开出提货单尚未提取代为保管的产品。

## Explanatory Notes for Major Indicators

**Total Energy Production** refers to the total production of primary energy by all energy producing enterprises in the country (region) in a given period of time. It is a comprehensive indicator to observe the capacity, scale, composition and development of energy production of the country (region). The production of primary energy includes coal, crude oil, natural gas, hydro-power and electricity generated by other means such as wind power and geothermal power. The production of fuels of low calorific value, bioenergy, solar energy and secondary energy converted from the primary energy are excluded.

**Total Domestic Energy Consumption** refers to the total energy consumption of various forms by material production departments, non-material production departments and households in the country (region) in a given period of time. It is a comprehensive indicator to observe the scale, composition and development of energy consumption. The total energy consumption includes raw coal, crude petroleum and their products, natural gas and electricity, but excludes fuel of low calorific value, bioenergy and solar energy. Total domestic energy consumption can be divided into three parts:

(1) **Final Energy Consumption** refers to the total energy consumption by material production departments, non-material production departments and households in the country (region) in a given period of time, but excluded the secondary energy consumption and loss for the process of energy conversion.

(2) **Loss During the Process of Energy Conversion** refers to the total input of various forms for conversion, minus the total output of energy of various forms in the country in a given period of time. It is an indicator to observe the loss that occurs during the process of energy conversion.

(3) **Loss** refers to the total loss of energy due to mistakes or any objective reasons during the course of energy transport, distribution and storage in a given period of time. The loss of various kinds of gas due to gas discharges and stocktaking is excluded.

**Elastic Coefficient of Energy Production** is an indicator of the relationship between the growth rate of energy production and the growth rate of the national economy. The formula is:

$$\text{Elastic Coefficient of Energy Production} = \frac{\text{Average Annual Growth Rate of Energy Production}}{\text{Average Annual Growth Rate of National Economy}}$$

The average annual growth rate of the national economy can use the gross national product, national income and other indicators, depending upon the purposes or needs. This chapter is estimated using gross national product.

**Elastic Coefficient of Electricity Production** is an indicator of the relationship between the growth rate of electricity production and the growth rate of the national economy. Generally speaking, the growth rate of electricity production should be higher than that of the national economy. Its formula is:

$$\text{Elastic Coefficient of Electricity Production} = \frac{\text{Average Annual Growth Rate of Electricity Production}}{\text{Average Annual Growth Rate of National Economy}}$$

**Elastic Coefficient of Energy Consumption** is an indicator of the relationship between the growth rate of energy consumption and the growth rate of the national economy. The formula is:

$$\text{Elastic Coefficient of Energy Consumption} = \frac{\text{Average Annual Growth Rate of Energy Consumption}}{\text{Average Annual Growth Rate of National Economy}}$$

**Elastic Coefficient of Electricity Consumption** is an indicator of the relationship between the growth rate of electricity consumption and the growth rate of the national economy. The formula is:

$$\text{Elastic Coefficient of Electricity Consumption} = \frac{\text{Average Annual Growth Rate of Electricity}}{\text{Average Annual Growth Rate of National Economy}}$$

**Efficiency of Energy Conversion** refers to the ratio of the total output of energy products and the total input of energy conversion of various kinds in the same reference period. It is an important indicator to observe the current conditions of energy conversion equipment, production technique and management. The formula is:

$$\text{Efficiency of Energy Conversion} = \frac{\text{Output of Energy Conversion}}{\text{Input of Energy Conversion}} \times 100\%$$

**Newly Increased Resources of Materials** refers to total quantity of certain resources in a given period of time, including total output and import in reference period.

Output refers to total domestic production of certain goods in reference period.

Import refers to total import of certain goods through customs in reference period.

**Domestic Consumption of Major Materials** refers to actual quantity of materials consumed by construction units, including production consumption and consumption for capital construction, which reflects the size, level, and structure of consumption of certain materials.

Statistics of Domestic Consumption of Major Materials are reported by consumers following the rule that materials which have been changed in shape, nature, or become part of project are considered as consumption.

**Production Consumption** refers to the quantity of materials consumed by production enterprises and institutions in a given period of time, including consumption for production of goods, for operating and maintenance, and for technical updating and transformation.

Consumption for Production of Goods refers to consumption directly occurred in production process and consumption in formation of new products.

Consumption for Operating and Maintenance refers to materials consumption by production enterprises and institutions for investment in productive fixed assets and non-productive fixed assets, maintenance and repairing of equipments, and for the operation of management sectors.

Consumption for Technical Updating and Transformation refers to materials consumption in technical updating and transformation and replacement of original equipments, fixed assets, and accessory productive and living and welfare facilities of enterprises and institutions for the purpose of intensive expansion of production. Consumption of materials by construction and installation enterprises is not included in this category but included in

Consumption for Capital Construction".

**Consumption for Capital Construction** refers to materials consumption by construction units and geological survey units for capital construction, technical updating and transformation, pre-manufacturing of construction parts.

Consumption for Capital Construction refers to materials consumption for new construction, expansion, and relevant constructions for the purpose of extensive expansion of production.

Consumption for Technical Updating and Transformation refers to materials consumption for projects of technical updating and transformation by construction and installation enterprises, including the consumption for technical updating and transformation of construction enterprises.

**Stock of Industrial Products** refers to quantity of finished goods meeting the quality standards which are in stock of independent-accounting enterprises at or above township level. It includes goods in storage, goods shipped to transport station or harbor but not consigned, goods temporarily out of storage for repairing (with no registration for in and out), but excludes finished goods which have not been checked and accepted and goods in stock with bill of lading issued but not picked up.

## 主要统计指标解释

**零售价格指数** 是反映城乡商品零售价格变动趋势的一种经济指数。零售物价的调整变动直接影响到城乡居民的生活支出和国家的财政收入,影响居民购买力和市场供需平衡,影响消费与积累的比例。因此,计算零售价格指数,可以从一个侧面对上述经济活动进行观察和分析。

零售价格指数采用加权算术平均公式计算。每年根据住户调查资料调整一次权数。1992年全国有146个市、80个县城作为基层填报单位。城市指数所选商品352种左右,县城指数所选商品404种左右。每种商品的指数采用代表规格品的平均价格计算。

**居民消费价格总指数** 是反映一定时期内城乡居民所购买的生活消费品价格和服务项目价格变动趋势和程度的相对数。是综合了城市居民消费价格指数和农民消费价格指数计算取得。利用居民消费价格指数,可以观察和分析消费品的零售价格和服务价格变动对城乡居民实际生活费支出的影响程度。

1952年以前采用固定数量加权综合法(即总值法)计算,1953年到1956年采用加权算术平均公式计算,1957年以后根据消费品零售价格指数与服务项目价格指数汇编居民生活费用价格指数。1993年计算指数所选商品和服务项目为382种。

**城市居民消费价格指数** 是反映城市职工及其家庭所购买的生活消费品和服务项目价格变动趋势及其程度的相对数。编制城市居民消费价格指数,可以观察和分析消费品的零售价格和服务项目价格变动对职工货币工资的影响,作为研究职工生活和确定工资政策的依据。

**农村居民消费价格指数** 是反映农村居民家庭所购买的生活消费品的价格和服务项目价格变动趋势和程度的相对数。用它可观察农村消费品的零售价格和服务项目价格变动对农村居民生活消费支出的影响,直接反映农民生活水平的实际变化情况,为分析和研究农村居民生活问题提供依据。

**农产品收购价格总指数** 是反映国有商业、集体商业、个体商业、外贸部门、国家机关、社会团体等各种经济类型的商业企业和有关部门收购农产品价格的变动趋势和程度的相对数。农产品收购价格指数可以观察和研究农产品收购价格总水平的变化情况,以及对农民货币收入的影响,作为制订和检查农产品价格政策的依据。1993年计算指数所选的商品有11个大类,包括276种农副土特产品。采用加权倒数平均公式(即按报告期实际收购金额加权综合法)计算。

**农村工业品零售价格指数** 是反映农村市场工业品零售价格水平变动趋势和程度的相对数。通过农村工业品零售价格指数,可以观察工业品零售价格变动对农民货币支出的影响。

农村工业品零售价格指数的计算是根据农村国营商品零售物价指数中的食用植物油、干菜、调味品、食糖、烟酒茶、糖果、糕点、奶及奶制品、罐头、西药及医疗用品以及衣着、日用品、文化娱乐用品、书报杂志、建筑材料、燃料和农业生产资料等类指数加权计算。

**工农业商品综合比价指数** 是反映农副产品和工业品交换比价变动情况的经济指数。根据农副产品收购价格指数和农村工业品零售价格指数计算。反映用农副产品交换工业品的比价变化情况,即不同时期由于价格变动,农民用等量的农副产品换到的工业品数量是增多了还是减少了,以及增多或减少的程度。计算公式:

$$\text{工农业商品综合比价指数(正)} = \frac{\text{农副产品收购价格指数}}{\text{农村工业品零售价格指数}} \times 100\%$$

**工业品出厂价格指数** 是反映全部工业产品出厂价格总水平的变动趋势和程度的相对数。其中除包括工业企业售给商业、外贸、物资部门的产品外,还包括售给工业和其他部门的生产资料以及直接售给居民的生活消费品。

通过工业生产价格指数能观察出厂价格变动对工业总产值的影响。

**固定资产投资价格指数** 是反映固定资产投资额价格变动趋势和程度的相对数。固定资产投资额是由建筑安装工程投资完成额、设备、工器具购置投资完成额和其他费用投资完成额三部分组成的。编制固定资产投资价格指数应首先分别编制上述三部分投资的价格指数,然后采用加权算术平均法求出固定资产投资价格总指数。

编制固定资产投资价格指数可以准确地反映固定资产投资中涉及的各类商品和取费项目价格变动趋势和变动幅度,消除按现价计算的固定资产投资指标中的价格变动因素,真实地反映固定资产投资的规模、速度、结构和效益,为国家科学地制定,检查固定资产投资计划并提高宏观调控水平,为完善国民经济核算体系提供科学的、可靠的依据。

## Explanatory Notes for Major Indicators

**Retail Price Index** reflects the general change in prices of retail commodities. The change and adjustment in retail prices directly affect living expenditure of urban and rural residents and government revenue, purchasing power of residents and equilibrium of market supply and demand, and the proportion of consumption and accumulation. Therefore, retail price index can predict to certain extent the changes of the above economic activities.

Retail price indexes are calculated by the formula of weighted arithmetic mean. The weights used are adjusted annually based on data of household survey in cities. In 1992, more than 146 cities and 80 county towns are selected as the basic units for data collection: 352 items of commodities in the cities and 404 in the county towns are included in the calculation. The price of a standard commodity from each item of products is adopted in the calculation.

**Consumer Price Index** reflects the relative change in prices of consumer goods and services purchased by urban and rural residents, and is derived from urban consumer price index and rural consumer price index. Consumer price index can be used to predict the impact of consumer price change on actual living cost expenditure of urban and rural residents.

Prior to 1952, consumer price index was calculated with a weighted mean price on a fixed quantity (total value method). The formula of weighted arithmetic mean was used between 1953 and 1956. After 1957, consumer price index is based on urban retail prices index and service prices index. Commodities and services of 382 kinds were chosen for the calculation.

**Urban Consumer Price Index** reflects the relative change in prices of consumer goods and services purchased by urban workers and staff and their families and can be used to observe and analyze the impact of price change in consumer goods and services on money wage of workers and staff and provide basis for policy making concerning living standards and wages of workers and staff.

**Rural Consumer Price Index** reflects the relative change in prices of consumer goods and services purchased by rural households and can be used to observe the impact of change in prices of consumer goods and services on living expenditure and actual change in peasant' living standards. It provides basis for analysis and research on peasants' welfare problems.

**Index of Purchasing Prices for Farm Products** reflects the relative change in purchasing prices of farm products purchased by state-owned, collective-owned, and individual commercial enterprises, foreign trade sectors, government agencies, social organizations and other units of various ownership. It is used to observe the impact of change in purchasing prices of farm products on money income of peasants and is calculated with the weighted harmonic mean method based on the total value of purchases during a given reference period. Number of products involved in the current calculation totalled 276 in 11 categories in 1992.

**Retail Price Index of Rural Industrial Products** reflects the relative change in prices of industrial products in rural market and can be used to observe the impact of the price change on farmers' money expenditure.

Retail Price Index of Rural Industrial Products is calculated based on rural state listed prices indexes for edible vegetable oils, dry vegetables, species, sugar, cigarettes, alcohol, tea, candies, pastries, milk, and dairy

foods, canned foods, western medicine, and medical equipments and clothing, daily used goods, cultural and recreation goods, books, magazines, and newspapers, and construction materials, fuels, and agricultural production means and their weights.

**Parity Price Ratio of Industrial and Agricultural Products** reflects the terms of trade for agricultural products and industrial products and the impact on changes in parity price ratio to the exchange position of farm and sideline products by using the purchasing prices of agricultural products and rural retail prices of industrial products as follows:

$$\text{Parity Price Ratio of Industrial and Agricultural Products} = \frac{\text{Purchasing Price Index of Agricultural Products}}{\text{Retail Price Index of Industrial Products}} \times 100\%$$

**Factory Price Index** reflects the change in general factory price of all industrial products, including sales of industrial products to commercial enterprises, foreign trade sectors, materials supplying and distributing sectors as well as sales of production means to industry and other sectors and sales of consumer goods to residents. It can be used to predict the impact of factory prices on gross output value of industry.

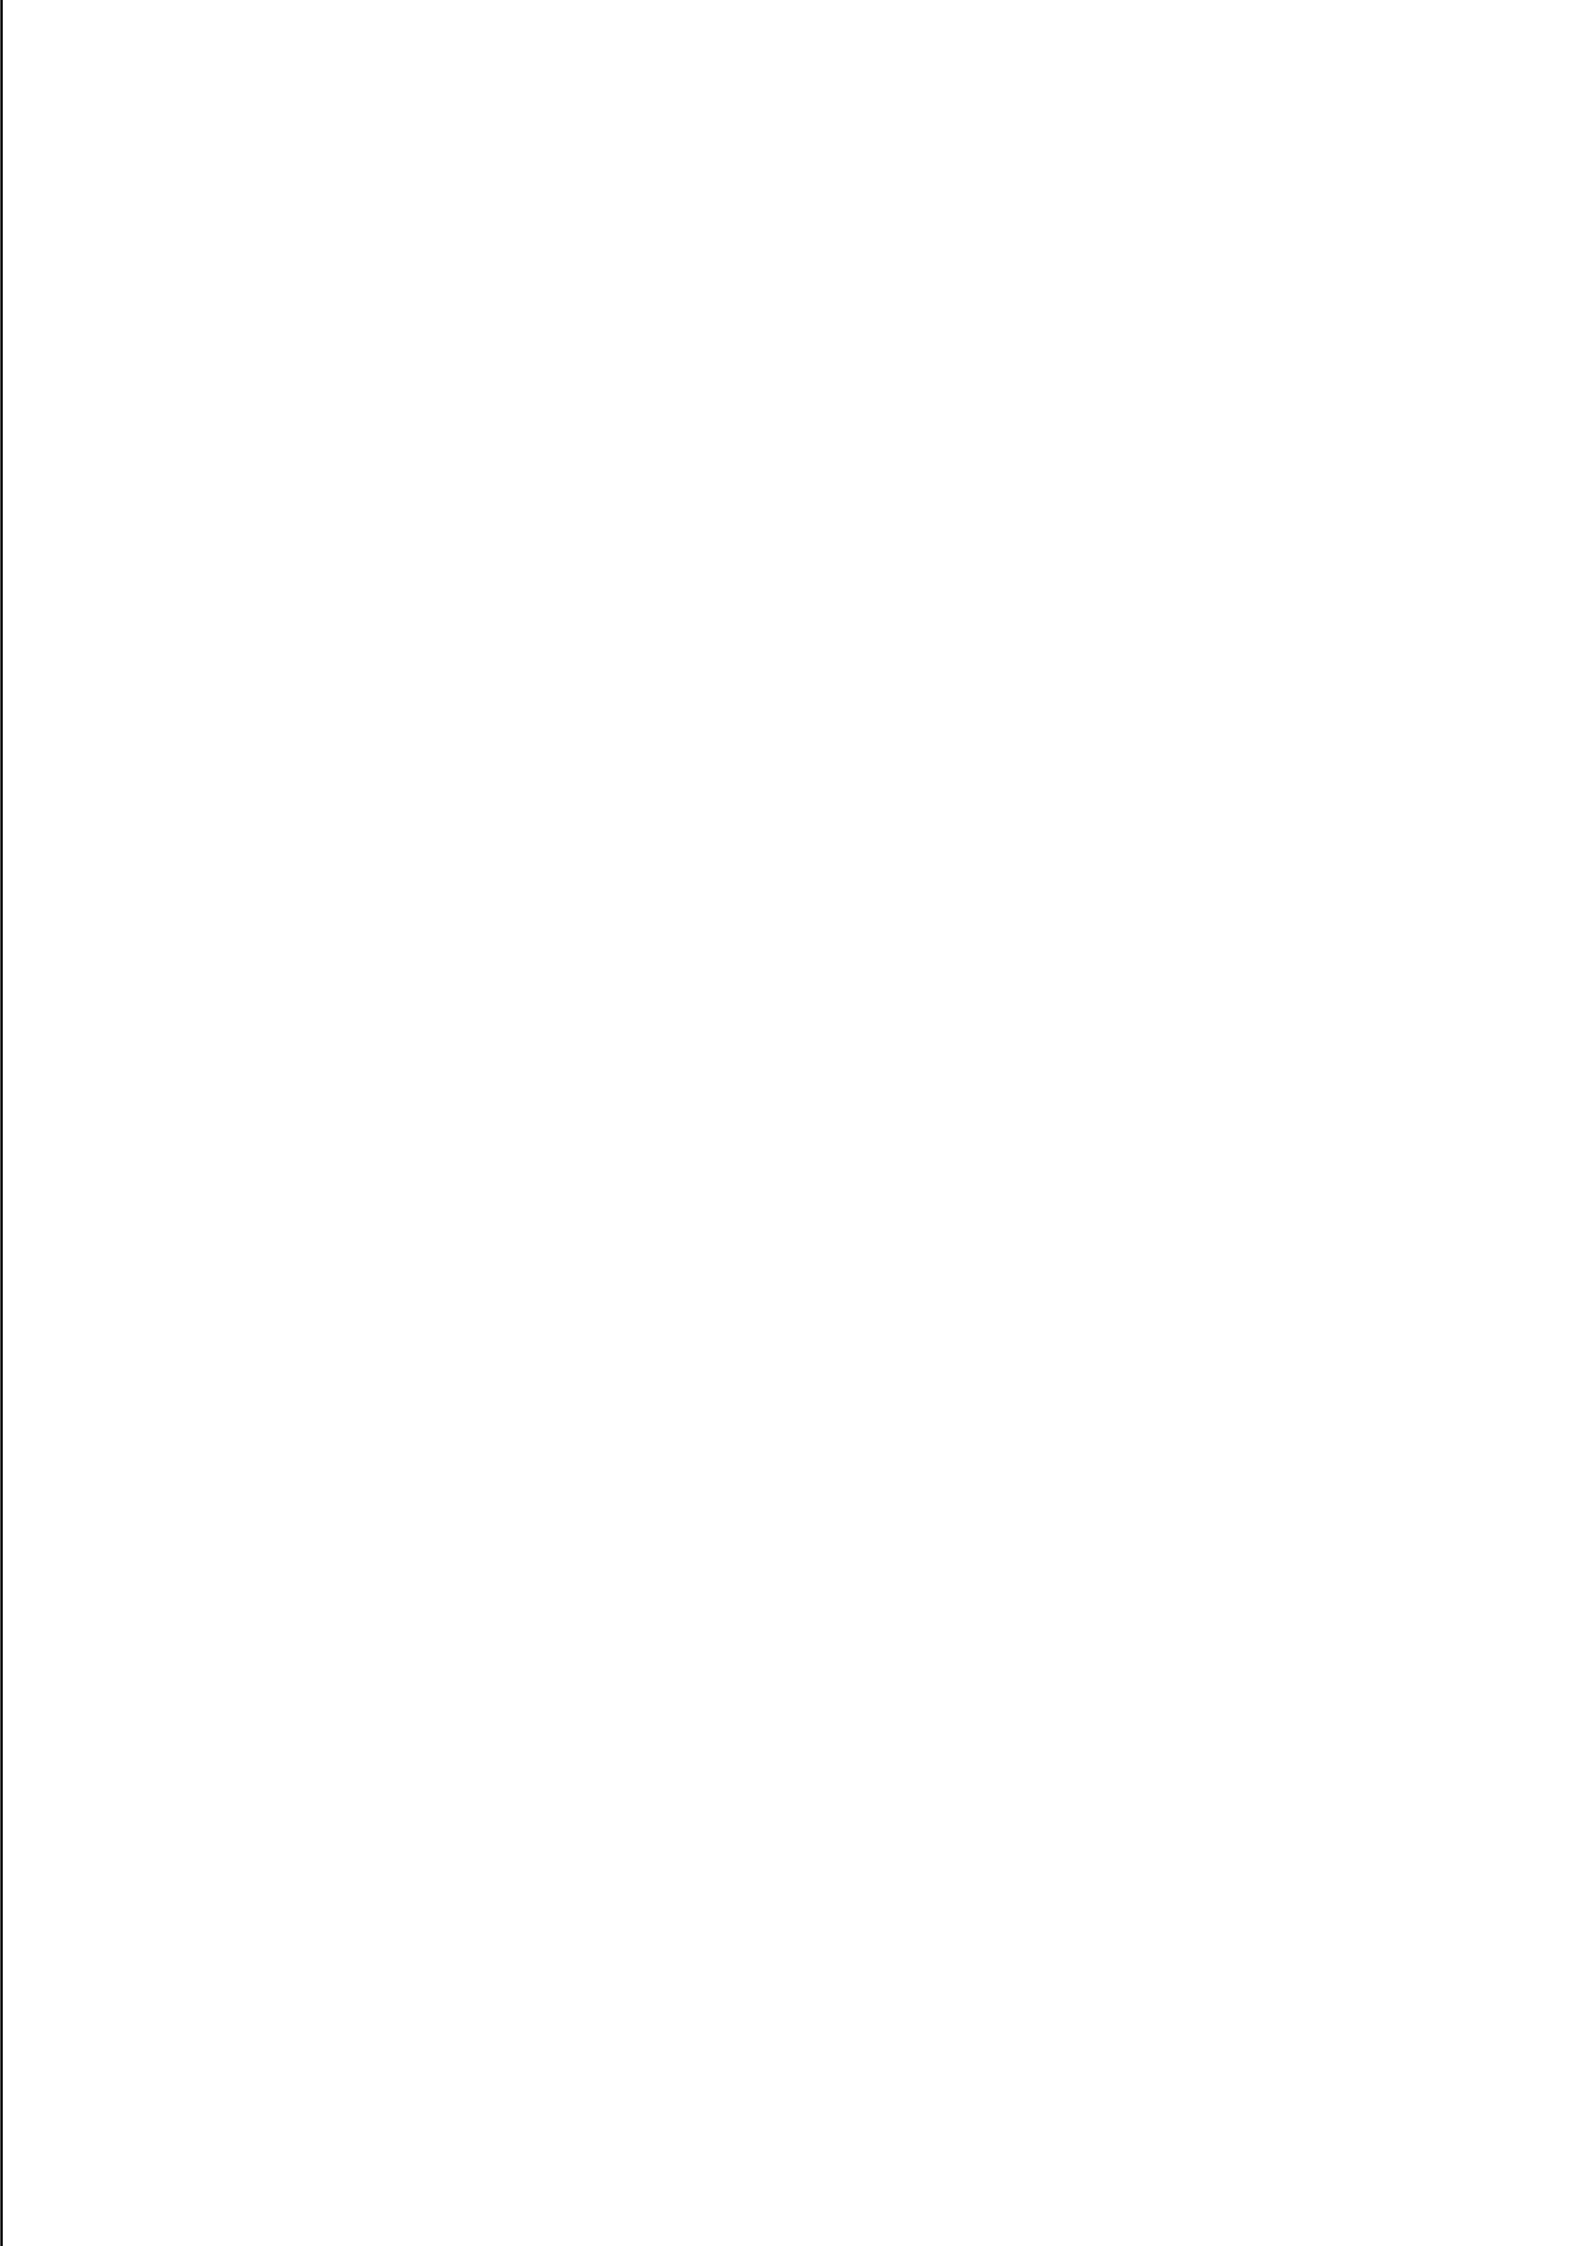

**Price Index of Investment in Fixed Assets** reflects the change in price of investment in fixed assets which consists of three components as investment completed in construction and installation, purchases of equipments and instruments, and other items. Price index of investment in fixed assets is constructed by using weighted arithmetic mean of price indexes of three components of investment in fixed assets.

Price index of investment in fixed assets reflects the changes of prices in various goods and services involved in investment in fixed assets and therefore can be used when comparison over time is made to observe the actual size, speed, structure, and efficiency of investment in fixed assets and provides reliable and scientific data for government planning, management, decision making, and further improving the current national accounting system.
