No. 521.—STEAM RAILWAYS—REVENUE FREIGHT ORIGINATED AND CARRIED, BY COMMODITY GROUPS, ALL ROADS, 1906 TO 1915, CLASS I ROADS, 1916 TO 1942

NOTE.—All figures in thousands of tons of 2,000 pounds. Data relate to years ended June 30 prior to 1916, to calendar years thereafter. Switching and terminal roads excluded beginning with 1908. Figures for 1911 to 1915, inclusive, exclude class III roads but this affects the comparability very slightly; those after 1916 exclude both class II and class III, thereby reducing the grand total about 6 percent. Non-revenue freight is excluded; this is a large item in the case of a few commodities, notably coal.

No. 522.—STEAM-RAILWAY ACCIDENTS—NUMBER OF PERSONS KILLED AND INJURED, BY STATUS: 1891 TO 1942

NOTE.—For various reasons, including the fact that returns were required under different acts, the statistics are not strictly comparable. Prior to 1921, train accidents were those causing damage to railway property in excess of \$150 or any damage and a resulting casualty. Thereafter they were considered as such when the damage exceeded \$150 with or without a casualty. Where the damage is less than \$150 and there is a reportable casualty it is classified as a train-service accident. Figures for years 1911-1915 include industrial and other nontrain accidents to employees only, and for years 1908-1910 do not cover switching and terminal roads. Otherwise the statement covers all reportable accidents, including those due to suicide, mental derangement, and attempting to escape custody.

No. 527.—ELECTRIC RAILWAYS—SUMMARY: 1890 TO 1937

NOTE.—The census of street railways, which was first taken in 1890, and which has been taken at quinquennial intervals through 1937 beginning with the inquiry for 1902, covers (1) all street railways, without regard to kind of motive power, and (2) all interurban railways using other than steam as motive power. The nonelectric railroads included are those operated principally by cable and gasoline engines. Operations of electrified divisions of steam-railway companies are not included. Figures in this table do not include data for motorbus and trolley-bus operations of electric street railways. (For motorbus and trolley-bus statistics from census reports, see source.)

¹ Excludes data for 22 companies, operating on a part-year basis. These companies reported 36,810,221 passengers; 9,108,009 car-miles; 1,042,366 car-hours; \$2,388,295, operating revenue; and \$2,412,010, operating expense.

² Includes certain companies in Pennsylvania which maintained separate organizations, though controlled through stock ownership by other companies. For 1912 these companies were treated as merged and not included in the number reported.

³ Includes small mileage of track lying outside United States.

⁴ Data incomplete. Some of the companies engaged in both light-and-power and electric-railway operations were unable to report separately the values of plant and equipment assignable to their railway activities.

⁵ Number reported as of June 30, for 1890, 1922, 1927, and 1932; for 1902, average for the year; for 1912, as of Sept. 16. Figures for 1937 represent an average of numbers reported on June 30 and Dec. 31.

⁶ Includes 334 trolley-bus operators.

⁷ Includes 29,721,000 trolley-bus passengers.

⁸ Includes auxiliary operating revenues of \$8,905,000 for 1927 and \$91,242,000 for 1922; auxiliary expenses, \$7,822,000 for 1927, and \$49,232,000 for 1922. Data for operating revenues and operating expenses of auxiliary operations excluded so far as possible for earlier years.

¹ Local passenger revenue and baggage, mail, express, newspaper, miscellaneous station and terminal, and other operating revenue.

² Amortization represents a very small part of this total.

³ Does not include Federal or State income taxes.

⁴ Withdrawals, small in amount, of sole proprietors and partners.

⁵ Total vehicles owned at close of year.

⁶ Includes bus-miles of vehicles operated under "purchased transportation arrangements."

⁷ Data reported by 142 and 134 carriers in 1939 and 1940, respectively.

⁸ Includes only service on local and suburban runs of preponderantly intercity carriers.

⁹ Averages are for regular route intercity service and are for owned vehicles only in 1940 and owned and leased vehicles in 1939 and 1941.

19. WATERWAYS, WATER TRAFFIC, AND SHIPPING

[Data in this section cover the following areas unless otherwise indicated: From Board of Engineers of the United States Army, Bureau of Census, Bureau of Customs, and Bureau of Foreign and Domestic Commerce, United States customs area which includes Alaska, Hawaii, and Puerto Rico, and, from Jan. 1, 1935 through Dec. 31, 1939, Virgin Islands; from United States Maritime Commission, continental United States. Later figures than now shown in tables are not available for publication because of wartime restrictions]

General note as to units of measurement.—"Cargo tonnage" represents weight of cargo in long tons (2,240 pounds) or short tons (2,000 pounds). All other tonnage figures refer to capacity of vessels. The terms gross and net tonnage refer to space measurement, 100 cubic feet being called 1 ton. Gross tonnage is the capacity of the entire space within the frames and the ceiling of the hull, together with those closed-in spaces above deck available for cargo, stores, passengers or crew, with certain minor exemptions. Net or registered tonnage is what remains after deducting from the gross tonnage the spaces occupied by the propelling machinery, fuel, crew quarters, master's cabin, and navigation spaces. It represents substantially space available for cargo and passengers. The net tonnage capacity of a ship recorded as "entered with cargo" may bear little relation to actual weight of cargo. Dead-weight tonnage is the weight in long tons required to depress a vessel from light water line (that is, with only the machinery and equipment on board) to load line. It is therefore the weight of the cargo, fuel, etc., which a vessel is designed to carry with safety. Displacement tonnage (naval vessels) has reference to weight of the vessel itself with its normal equipment, fuel, etc.

No. 539.—COMMERCE OF PRINCIPAL UNITED STATES OCEAN PORTS: 1940

NOTE.—In thousands of short tons of 2,000 pounds. In addition to the commerce here shown, many of the ports have (1) commerce with ports on internal rivers and canals; (2) purely local port traffic, including, in the case of New York, Philadelphia, and San Francisco, what is called intraport traffic between parts of a harbor for which separate statistics are maintained. These forms of traffic, although the aggregate tonnage is large, are of much less economic importance than foreign and coastwise traffic

¹ Sailing vessels, canal boats, and barges.

² The decrease of tonnage arises principally from the registered tonnage having been corrected in 1818, 1829, and 1830 by striking off all vessels the registers of which were granted prior to 1815, which were supposed by the collectors to have been lost at sea, captured, etc.

³ Figures as of Dec. 31 are latest available for publication. Later data, compiled by Treasury Department, Bureau of Customs, will not be published during war period.

⁴ Including Puerto Rico and Virgin Islands.

⁵ Including Hawaii and Alaska.

¹ Taxes, fees, fines, etc.

² Principally from operation of shops and docks.

³ After deduction of canal earnings repaid to appropriations.

⁴ No interest charge against the Canal is actually made by the Treasury. In order to present the net results of the operation of the Canal, the interest on capital invested is computed at a rate considered reasonable for Government borrowings over an indefinite period. Computed interest prior to July 12, 1920, is included in capital investment account.

No. 561.—VESSELS ENTERED AND CLEARED IN FOREIGN TRADE—NET TONNAGE:
1840 TO 1941

NOTE.—Domestic trade is not included. For definition of net tonnage see general note, p. 480. Figures cover years ended June 30 to and including 1918, calendar years thereafter. Owing to the marked effect of the war on shipping a special average for the 6½ years July 1, 1914, to Dec. 31, 1920, is presented.

NET TONNAGE, BY NATIONALITY OF VESSEL: 1921 TO 1941

NOTE.—In thousands of net tons. Only traffic by sea and to and from foreign countries is included. The large trade with Canada on the Great Lakes and the St. Lawrence is handled about equally by vessels of the United States and of the British (Canadian) flag. See tables 563 and 564 in which the columns for northern border represent trade with Quebec and Ontario.

20. FOREIGN COMMERCE OF THE UNITED STATES

GENERAL NOTE.—All statistics in this section, except tables 570 and 601, were compiled by the Department of Commerce, Bureau of Foreign and Domestic Commerce through April 1941 and by the Bureau of the Census thereafter. Statistics of United States foreign trade were published annually in Foreign Commerce and Navigation of the United States through 1940 and were published currently in Monthly Summary of Foreign Commerce of the United States and in mimeographed statements through September 1941. After the issuance of the September 1941 figures, the publication of foreign trade statistics by countries and by commodities was discontinued because of wartime restrictions. Early in 1944, however, the annual figures for 1941 including those by commodities and by countries were released for publication. Values of total exports and total imports are published in monthly press releases. Except as noted (as, for example, in table 599) the values stated are in United States dollars without reference to changes in the gold content of the dollar. (The statutory price of gold—\$20.67 per ounce—in effect prior to Jan. 31, 1934, was changed on that date by Executive Order to \$35 per ounce. Between Mar. 10, 1933, and Jan. 31, 1934, the foreign exchange value of the dollar was permitted to depreciate as a result of restriction placed on gold shipments to foreign countries.) The geographic area covered by these statistics, except as noted, is the United States customs area, which includes Alaska, Hawaii, and Puerto Rico, and from Jan. 1, 1935, through Dec. 31, 1939, the Virgin Islands (see headnote, table 569). Other explanations of the trade tables are given in the introduction to the annual report, Foreign Commerce and Navigation of the United States.

No. 569.—MERCHANDISE TRADE OF CONTINENTAL UNITED STATES WITH FOREIGN COUNTRIES AND OUTLYING TERRITORIES AND POSSESSIONS: 1903 TO 1941

IMPORTANT NOTE.—This table differs as to its geographic basis from all other foreign trade tables in this section and in other publications: (1) In the case of other tables the data represent the trade of the United States customs area with all foreign countries, including the Philippine Islands and prior to 1935, the Virgin Islands. The U. S. customs area comprises continental U. S., Alaska, Hawaii, Puerto Rico, and during 1935 through 1939, the Virgin Islands. Trade between continental U. S. and the territories mentioned as part of the customs area are therefore excluded from these data. (2) The present table takes continental United States as the basis. In the totals, trade between it and all United States Territories and possessions is included, while the trade between that part of the customs area outside of continental United States and foreign countries is excluded. Practically all other nations calculate their foreign trade in the manner followed in the present table; that is, totaling the trade of the home country with foreign countries and with all outlying areas. Prior to 1901 Alaska was our only outlying area. Therefore, our foreign trade statistics for 1900 and earlier years very nearly represent the trade of continental United States with foreign countries. Data are for years ended June 30 through 1918; thereafter, for years ended Dec. 31.

No. 575.—EXPORTABLE GOODS, PRODUCTION AND PROPORTION EXPORTED: 1909 TO 1941

NOTE.—Agricultural production is gross income, excluding feed, seed, and waste. Value added by manufacture represents manufactures. Value of mine products in 1909 and 1919 are census figures, in 1929 census data plus petroleum products, while estimates for other years are based on data of the Bureau of Mines. As the figures are not adjusted for price changes, the increase or decrease in absolute values from period to period should be disregarded.

No. 576.—EXPORTS AND IMPORTS OF MERCHANDISE: 1791 TO 1943

NOTE.—All figures in thousands of dollars. For basis of dollar values, see general note, p. 505. Figures are for fiscal years ended Sept. 30, 1791 to 1842, and June 30, 1843 to 1915; calendar years thereafter. For calendar years 1900-15 and fiscal years 1927-43, see table 578. For total exports and imports by years prior to 1898, see table 579. Figures include gold and silver prior to 1821.

No. 580.—EXPORTS AND IMPORTS OF MERCHANDISE, PER CAPITA: 1791 TO 1942

NOTE.—Export figures for 1791 to 1820 are based on total exports including reexports (the latter were then relatively large) and for 1821 to date, on exports of United States merchandise only, shown in table 576. Import figures for 1791 to 1820 are based on general imports shown in table 576; for 1821 to 1870, total imports less reexports, and for 1871 to date, imports for consumption, shown in table 581.

No. 581.—IMPORTS ENTERED FOR CONSUMPTION AND DUTIES THEREON: 1821 TO 1941

NOTE.—For basis of dollar values, see general note, p. 505. From 1821 to 1866, inclusive, the figures of import values represent total imports less reexports, and for 1867 and later years imports entered for consumption. The "ratio of duties to total" is based upon the values of imports shown in the table. Figures cover fiscal years ended Sept. 30, 1821 to 1842, and June 30, 1843 to 1915; calendar years thereafter.

No. 586.—IMPORTS OF MERCHANDISE, FREE AND DUTIABLE,

NOTE.—All figures in thousands of dollars. For basis of dollar values, see general note, p. 505. Figures Data are "general imports" through 1933; "imports for consumption" beginning 1934. The percentage of the dutiable general imports are reported as reexported than of the free general imports. Moreover, 1933, carpet wool used for making carpets and, for 1922 to 1928, wheat imported for milling in bond for For adjusted figures see table 492 of the 1935 issue of the Statistical Abstract.

¹ Includes beverages.² Period July 1, 1915, to Dec. 31, 1920.³ Fiscal years.

AND PERCENT FREE, BY ECONOMIC CLASSES: 1821 TO 1941

cover years ended Sept. 30, 1821 to 1840, and June 30, 1850 to 1915; calendar years thereafter, except as noted. free in general imports is normally slightly lower than in imports for consumption because relatively more in the period 1922-1933, there is an understatement of the free goods in general imports because, for 1922 to export were reported as dutiable when entered, although no duty was ultimately paid on these products.

No. 589.—EXPORTS OF UNITED STATES MERCHANDISE AND IMPORTS—INDEXES OF QUANTITY, UNIT VALUE (PRICE), AND TOTAL VALUE: 1913 TO 1941

NOTE.—The quantity and unit value indexes have been constructed by the so-called "ideal formula," the essential feature of which is the use of the quantities of the several articles as weighting factors of their unit values for each pair of years compared. About 265 commodities were included in the direct calculations for both exports and imports. It was then assumed that the prices of articles in each economic class not directly covered had moved in parallel with those of articles covered and their value, adjusted by the computed price index, was included in the aggregative totals from which the quantity index for each class was calculated. The index of quantity and unit value of total exports and imports was based on the aggregate of the adjusted totals of the classes. In constructing the indexes the data for 1919 were linked directly to 1913, and each subsequent year was compared with that preceding. The resulting year-to-year percentages were made into a series by the chain method.

No. 596.—EXPORTS (INCLUDING REEXPORTS) AND GENERAL IMPORTS OF MER

NOTE.—In the case of some countries, especially those having no seaports, there is considerable indirect imports from them; for such countries the apparent balance of trade may be far from the true to Europe and reported as exported to Canada. Such grain shipments were especially large in the and North America and included in exports to Europe are given in table 495 of the 1935 Statistical

trade by way of other countries, this being usually larger in the case of our exports to them than of our balance. A marked case of indirect trade is that of grain exported through Canada (mostly via Montreal) period 1920-29 and in 1938. Adjusted figures in which this grain is deducted from exports to Canada Abstract and the Trade Promotion Bulletin Nos. 198 and 215. Figures are for calendar years.

¹ See headnote.² Average for 4 years.³ Treated as a customs district of the United States from Jan. 1, 1935, through Dec. 31, 1939. For trade of Virgin Islands with the United States and with foreign countries beginning 1935, see table 607.⁴ For statistical purposes, trade with Germany includes (as far as ascertainable) trade with German-occupied areas from the following dates: Austria, May 6, 1938; Sudeten area of Czecho-Slovakia, Nov. 10, 1938; other Czecho-Slovak provinces (Protectorate of Bohemia-Moravia and part of Slovakia), Mar. 18, 1939; Memel territory of Lithuania, Mar. 25, 1939; and Danzig and the German-occupied parts of Poland, Nov. 16, 1939. Similarly, trade with the Czecho-Slovak area occupied by Poland is included with the Polish trade from Dec. 30, 1938, to Nov. 16, 1939, while trade with that area of Czecho-Slovakia occupied by Hungary is included with that country's trade after Dec. 30, 1938, and Mar. 19, 1939, for the respective portions of Ruthenia and part of Slovakia occupied by Hungary on those dates.

¹ As reported to Treasury Department by collectors of customs, subject in certain cases to subsequent refund as well as drawback. These figures are somewhat higher than duties as calculated on the basis of imports for consumption, as shown in table 581.

² Duties less cost of collection into Puerto Rico and the Virgin Islands are turned into the Islands Treasury. Duties into the Virgin Islands are assessed under the tariff law of the Virgin Islands and

not under the tariff act of the United States.

³ Not included in total beginning 1940.

⁴ Formerly San Antonio, changed to Laredo, effective Dec. 22, 1939.

⁵ Iowa included with Chicago, beginning Sept. 23, 1939.

⁶ Utah and Nevada included with San Francisco, effective Feb. 22, 1940.

No. 599.—EXPORTS (INCLUDING REEXPORTS) AND IMPORTS OF MERCHANDISE,
BY GROUPS OF CUSTOMS DISTRICTS: 1860 TO 1941

NOTE.—All figures in thousands of dollars. For basis of dollar values, except export figures for 1865 and 1870-78, see general note, p. 505. Export figures for those years represent mixed gold and currency values and hence do not agree with the specie values given for total exports in other tables. Figures cover fiscal years to and including 1915, calendar years beginning 1916. Import data are "general imports" through 1933; "imports for consumption" thereafter. Exports and imports of the interior districts, a small percentage of the total, are not included in this table.

No. 600.—EXPORTS (INCLUDING REEXPORTS) AND IMPORTS OF MERCHANDISE,
BY PRINCIPAL CUSTOMS DISTRICTS: 1860 TO 1941

NOTE.—All figures in thousands of dollars. For basis of dollar values, except export figures for 1865 and 1870-78, see general note, p. 505. Export figures for those years represent mixed gold and currency values. Figures cover fiscal years to and including 1915; thereafter, calendar years. Import data are "general imports" through 1933; "imports for consumption" thereafter. Areas of districts were rearranged July 1, 1913. Prior to that date some of the districts were more restricted. However, in most cases this change only slightly affects the comparability of the figures. Prior to 1914 the statistics given in the table for Buffalo include the (former) districts of Buffalo Creek and Niagara; those for Michigan include the (former) districts of Superior, Huron, and Detroit; and those for Massachusetts and Maryland were the former districts of Boston and Baltimore, respectively.

21. COMMERCE OF NONCONTIGUOUS TERRITORIES

GENERAL NOTE.—All statistics in this section, except as noted, were compiled by the Department of Commerce, Bureau of Foreign and Domestic Commerce through April 1941 and by the Bureau of the Census thereafter. Trade statistics of the United States and noncontiguous areas were published in the Monthly Summary of Foreign Commerce of the United States, December issue. After September 1941 the publication of all foreign trade statistics by countries and by commodities was discontinued because of wartime restrictions. Early in 1944, however, the annual figures for 1941 including those by commodities and by countries were released for publication. In the general foreign trade statistics of the United States presented in the preceding section, the Philippines and Virgin Islands, except 1935 through 1939 for the Virgin Islands, are treated as foreign countries and their trade with the United States is included while their trade with other countries is not included. On the other hand, Puerto Rico, Hawaii, and Alaska, and for 1935-39, Virgin Islands, are treated as integral parts of the United States, so that trade between them and continental United States is not included, while trade between them and foreign countries is included; each of these territories appears as a separate customs district. Neither trade of American Samoa and Guam with foreign countries nor shipments between them and United States are included in the general tables on foreign trade. See also table 569, p. 506.

The tables in this section present the total foreign trade of each of the United States Territories and possessions and show separately the trade with continental United States (unless otherwise indicated) and with foreign countries, including other United States Territories and possessions. For basis of dollar values, see general note, p. 505.

¹The discrepancy between the United States figures of exports to the Philippines prior to 1911 and the Philippine figures of imports from the United States in corresponding periods is due chiefly to the fact that the Philippine import figures prior to that year omit merchandise imported free of duty for the use of the Government or for use in construction and equipment of railways in the islands, under the act of Feb. 6, 1905, while the United States returns omit only Government supplies carried by Government vessels.

² Continental U. S. through 1938; includes outlying areas thereafter.

22. IRRIGATION AND DRAINAGE

[Data in this section relate to Continental United States]

No. 611.—IRRIGATION ENTERPRISES—SUMMARY: 1910 TO 1940

NOTE.—Data are for the 17 Western States and Arkansas and Louisiana. Tables 611 to 620 relate to irrigation enterprises of all types, including those operated by individual farmers. They are based on reports of the management of the enterprises. An enterprise is defined as "an independent irrigation establishment and includes the works for supplying water and the land for which water is supplied, except that the cost and value of the land is not included in the capital invested."

¹ Represents redeterminations and therefore differs from figures shown for earlier years.

² Not available.

³ Relates to total area in enterprises; irrigable areas not reported.

⁴ Does not include cost of operation and maintenance for rice growing districts in Gulf States; consequently figure is not comparable with those for later years.

¹ A farm reporting both irrigated and nonirrigated crops is recorded as one farm in the total.

² Not available.

³ Includes data for Lespedeza hay which is not shown separately.

⁴ Data available only for Arizona and California.

⁵ Computed by using acreages grown alone in all States except California, Idaho, Oregon, and Washington, where total acreages were used. ⁶ Running square bales of lint cotton, counting round as half bales.

¹ Estimates.

² For definition of urban and rural, see headnote, table 10, p. 11.

³ The 1930, 1935, and 1940 farm population comprises all persons living on farms without regard to occupation; the 1920 figures include also those farm laborers (and their families) who, while not living on farms, lived outside the limits of any incorporated place. A further difference is due to the fact that the 1920 and 1935 censuses were taken in January, while the 1930 and 1940 censuses were taken in April, when the number of persons on farms is appreciably larger. For farm population by States see table 12, p. 13.

⁴ Data collected for 1925 are not strictly comparable with figures for other years.

⁵ Includes cropland harvested, crop failure, cropland lying idle or fallow, and plowable pasture.

⁶ "Improved land"; figures nominally include land available for crops and land occupied by buildings, yards, and barnyards.

⁷ Value is of specified farm property, not all farm property.

⁸ Figures for land and for buildings are less satisfactory than figure for total real estate value; in other words, value of buildings should not be subtracted from total farm value and difference assumed to represent accurately market value of land alone. Figures for land include the value of fences, tile drains, and other incidental improvements on the land, excluding only the value of buildings.

⁹ Figures for 1910 exclude value of young animals when enumerated separately. For description of items for other years, see note 1 on "livestock," table 636, p. 530.

No. 637.—FARMS BY MAJOR SOURCE OF INCOME AND VALUE OF ALL FARM PRODUCTS: 1939

[Totals and the group "\$10,000 and over" are from complete tabulations of 1940 Census reports for individual farms; all other data are based upon a 2-percent sample of these reports, expanded and adjusted to agree with recorded totals. Figures marked with an asterisk (*) have a coefficient of variation of approximately 10 percent or more. Value of all farm products represents value of those sold, traded, or used by farm households]

¹ Differences between these totals and totals for farms regardless of additional land owned do not represent data for operating owners who owned additional land. Some operators did not make a report as to this item. For 1930, operators who did not report as to this item are included with those operators who reported that they owned no additional land.

¹ All tax data for 1930 are for farms reporting both total taxes and real-estate taxes.

² Not available.

³ Relates only to property owned by the operator.

⁴ Differences between these totals and totals for farms regardless of additional land owned do not represent data for operating owners who owned additional land. Some operators did not make a report as to this item. For 1930, operators who did not report as to this item are included with those operators who reported that they owned no additional land.

No. 665.—FERTILIZER CONSUMPTION, 1880 TO 1942, AND BY STATES, 1940, 1941, AND 1942

[Figures are based on tag sales, records of Government officials, or estimates. Beginning 1935, figures include tonnage distributed by Agricultural Adjustment Administration and by Tennessee Valley Authority, data for the latter representing fiscal years ended June 30. Data for phosphate rock used in Illinois have been excluded. Such data have only been available since 1939 and consequently have been excluded from annual comparisons. In addition to tonnage for consumption, shown in the table below, fertilizers and fertilizer materials produced in continental United States and exported to island possessions are as follows: To Hawaii, 1937, 57,200 tons; 1938, 35,250 tons; 1939, 49,600 tons; 1940, 63,450 tons. To Puerto Rico, 1937, 128,900 tons; 1938, 90,250 tons; 1939, 100,200 tons; 1940, 153,500 tons. Data for exports in 1941 and 1942 are not available for publication]

No. 677.—FARM PRODUCTION—INDEXES OF VOLUME, BY MAJOR GROUPS OF PRODUCTS: 1924 TO 1942

NOTE.—1935-39=100. Indexes are based on estimates of production for sale and for consumption in the farm home. Products fed to livestock or used for seed are not included. Calendar-year production of livestock and livestock products is compared with crop production of the same year. Commodities included in the index contributed about 93 percent of the gross farm income during 1935-39.

25. FARM ANIMALS AND ANIMAL PRODUCTS

[Data in this section relate to continental United States, except for table 690]

No. 686.—DOMESTIC ANIMALS ON FARMS—NUMBER AND VALUE: 1880 TO 1943

NOTE.—For census years prior to 1910 and for Jan. 1 estimates by the Dept. of Agriculture, animals of all ages are included except in figures for cattle and sheep, 1880 and 1890, which are nominally exclusive of calves and lambs, respectively. The difference in date of enumeration affects the comparability of the census figures for all classes and especially for swine.

No. 687.—DOMESTIC ANIMALS AND CHICKENS ON FARMS—NUMBER AND VALUE, BY KIND, AND FARMS REPORTING: 1930, 1935, AND 1940

NOTE.—Data for 1930 and 1940 are as of Apr. 1, and for 1935 as of Jan. 1. Owing to the difference in the date of enumeration, the figures for 1935 are not closely comparable with those for other years. The total value of all livestock for which data were collected at each census is shown in table 630, p. 572. Available data for certain classes not shown in the table below are as follows: Turkeys over 3 months old, 1935, 5,382,000, valued at \$11,668,000; turkeys over 4 months old, 1940, 4,362,000, valued at \$7,462,000. Hives of bees (on farms and elsewhere), 1930, 3,108,000, valued at \$13,632,000; 1940, 2,277,000, valued at \$7,326,000.

No. 701.—MEATS AND LARD—PRODUCTION, FOREIGN TRADE, AND CONSUMPTION,
BY KIND: 1935 TO 1942

NOTE.—All amounts, except per capita, in millions of pounds. Pork production represents total hog-carass weight, less raw fat from carcass which was rendered into lard. Other meat production represents dressed carcass weight only, with edible byproducts excluded. Lard production represents rendered weight of lard. Uninspected production includes farm, retail, and non-federally inspected wholesale slaughter. Meat obtained from cattle, calves, and sheep purchased for slaughter by Federal Government in 1935 in connection with drought-relief activities is not included. Exports and imports of meats comprise the several kinds of meat converted to a dressed-carass-weight basis. Lard exports represent rendered lard, including neutral lard. Exports include shipments to Alaska, Hawaii, Puerto Rico, and Virgin Islands. Consumption represents production plus imports less exports, with allowance for changes in storage stocks. Figures for recent years are subject to revision.

No. 713.—WOOL—PRODUCTION, IMPORTS, AND EXPORTS: 1839 TO 1942

NOTE.—All figures in thousands of pounds. Production, except census data, is estimated and is for calendar years; figures for 1909 and later years have been revised because of revised estimates for numbers of sheep, based on 1935 census data. Pulled wool is included beginning 1900 and was probably included for 1870 to 1899, though the exact basis of the estimates for these years is not known. Figures for 1839, 1849, and 1859 include only fleeces. Exports and imports for 1839 are for the fiscal year ended Sept. 30; for 1849 and 1859, fiscal years ended June 30; subsequently, calendar years. Imports and foreign exports prior to 1914 and domestic exports for all years include hair of the Angora goat, alpaca, and other like animals.

¹ Includes, in addition to production in the dairy products industries, data for similar products made in establishments classified in other industries.

² Not including data for cheese blended or processed, amounting to 244,315,000 pounds for 1937 and 296,284,000 pounds for 1939, valued at \$45,727,000 and \$48,714,000, respectively. See census report on "Special dairy products." ³ Includes data for a small amount of Neufchâtel cheese. ⁴ No data.

⁵ Made for sale as such, unfrozen. ⁶ Production in the meat-packing industry only.

⁷ Production in the meat packing industry only. Total production in all industries, as shown in census report on "Sausages, prepared meats, and other meat products—not made in meat-packing establishments," is as follows: Cooked hams—1937, 213,136,000 pounds valued at \$69,488,000; 1939, 220,598,000 pounds valued at \$63,297,000. Canned meats—1937, 240,767,000 pounds valued at \$48,183,000, and canned meats valued at \$3,913,000 (for which no quantity was reported) made in the "Food preparations not elsewhere classified" industry; 1939, 341,425,000 pounds valued at \$65,770,000. Canned sausage—1937, 28,073,000 pounds valued at \$5,999,000; 1939, 28,897,000 pounds valued at \$5,664,000. Sausages and sausage products, other than canned—1937, 1,592,493,000 pounds valued at \$285,133,000; 1939, 1,673,570,000 pounds valued at \$273,806,000.

⁸ Total production, as shown in Census report on "Sausage casings—not made in meat-packing establishments," is valued as follows: 1937, \$27,215,000; 1939, \$24,758,000.

⁹ Wool detached from sheep pelts in meat-packing establishments.

26. FARM CROPS AND FOODSTUFFS

[In general, data in this section other than on foreign trade relate to continental United States, while foreign trade statistics represent the trade of the customs area (see note, table 569). Any exceptions are noted. For weights of the units of measurement for the principal products, see Appendix, p. 928]

¹ Relative production as indicated by multiplying the production of the crops of each year by the 1927-32 average prices and dividing the aggregate for each year by the average aggregate for the same crops during the 1923-32 (predrought) period.

² Corn, oats, barley, all sorghums for grain, wheat, rye, buckwheat, rice, flaxseed, cotton, tame hay, wild hay, all sorghums for forage and silage, dry edible beans, soybeans for beans, peanuts, potatoes, sweet potatoes, tobacco, sorgo sirup, sugarcane, and sugar beets.

³ Apples, peaches, pears, grapes, plums, prunes, oranges, grapefruit, lemons, apricots, strawberries, cranberries, and olives.

⁴ Asparagus, snap beans, cabbage, sweet corn, cucumbers, peas, spinach, and tomatoes.

⁵ Asparagus, snap beans, cabbage, cantaloups, carrots, cauliflower, celery, cucumbers, lettuce, onions, peas, spinach, tomatoes, watermelons, beets, eggplant, and peppers. Production of farm gardens, home gardens, and most of market gardens excluded.

No. 719.—ACREAGE LOSSES—ESTIMATED ACREAGES OF CERTAIN CROPS PLANTED AND NOT HARVESTED: 1921 TO 1942

Acreage in thousands. Acreages for winter wheat represent areas sown the preceding fall and not harvested, thus including considerable land subsequently planted to other crops. Acreages for cotton include more than 10 million acres plowed under in 1933, but exclude acreage losses before July 1 and thus exclude some June losses from flood and other causes. Some early spring abandonment of sugar beets may also be omitted. For other crops totals exclude incidental abandonment such as normally occurs annually in consequence of hail, local overflow, poor soil, neglect, etc. Small grains harvested as hay, and corn which was salvaged as fodder or silage or by hogging or grazing, are included in harvested acreage. Totals do not show total crop losses chiefly because of large acreage of tame and wild hay land which produced only pasturage in some dry seasons. Losses of sorghums, rye, and other crops not shown were also material in some years]

¹ Acreage includes land in fruit orchards, vineyards, and planted nut trees (6,086,176 acres in 1929, 6,220,679 acres in 1934, and 5,044,952 acres in 1939) which was not reported in 1919; horticultural specialties (55,180 acres in 1919 and 157,494 acres in 1939); specified annual legumes (6,037,380 acres in 1939) grown alone. (Acreage shown for individual legumes is only that from which nuts, beans, or peas were harvested in 1939.) Values include horticultural specialties (\$106,145,000 for 1919, \$145,703,000 for 1929, and \$129,575,000 for 1939). (Excludes acreage of annual legumes saved for hay (3,067,710 acres in 1929, 9,500,946 acres in 1934, and 7,187,327 acres in 1939). ² "Kafir and milo" prior to 1929; sorghum seed included 1919. ³ Acreage grown alone. Not all harvested for grain or seed as acreage also includes that for hay and that which was grazed. Some grain or seed harvested from acreage grown with other crops. ⁴ Does not include sorghum for silage. ⁵ Exclusive of those grown in farm gardens. ⁶ Values represent farm gardens and vegetables harvested for sale, except for 1934; for that year, value represents farm gardens only. The acreage for all years represents vegetables harvested for sale only. ⁷ Prior to 1929, nominally sugarcane either for sugar or sirup or both. Acreage includes sugarcane for seed and other purposes not specified where specific reports were available. ⁸ For all purposes. ⁹ Production for sugar or sale to mills was 2,992,000 tons in 1929 and 5,366,000 tons in 1939; production of sirup was 15,169,000 gallons in 1929 and 16,205,000 gallons in 1939. ¹⁰ Running bales. ¹¹ Not comparable with earlier years. ¹² Including tangerines in 1919 and tangerines, mandarins, etc., in 1929 and 1939. ¹³ Less than \$500.

NO. 722.—PRINCIPAL CROPS—ACREAGE, PRODUCTION, AND VALUE: 1866 TO 1942

NOTE.—Tons are of 2,000 pounds. For weights of the units of measurement for principal products, see Appendix, p. 926. The approximate weights of units of measurement for other products are as follows: Number of pounds to a bushel—sweetpotatoes, 55; all sorghums for grain, 56; clover seed, 60. Number of pounds to a barrel of cranberries, 100. Prices and yields for the periods are weighted averages except for cotton and cottonseed, which are simple averages of prices and yields for the individual years. Acreage, production, and yield of all crops have been revised to census data.

¹ Values are based on prices for crop-marketing season or Dec. 1 prices. See notes on "Price."
² Received by farmers. Beginning 1908, prices are weighted average prices for the crop-marketing season; prior thereto, Dec. 1 prices. Prices for 1937 through 1942 for corn, 1938 through 1942 for wheat, and 1940 through 1942 for rye, include an allowance for unredeemed loans at average loan value.

¹ Values are based on prices for crop-marketing season or Dec. 1 prices. See notes on "Price."
⁴ Received by farmers. Beginning with 1908 for potatoes and cotton, 1910 for sweetpotatoes, and 1909 for cottonseed, prices are weighted average prices for crop-marketing season. Figures for prior years are Dec. 1 prices. For 1933, 1934, 1937, 1938 and 1940 season average prices for cotton crops include an allowance for unredeemed loans at average loan value.
⁵ Average for 8 years. ⁶ Average for 6 years. ⁷ Average for 7 years. ⁸ Average for 4 years.
⁹ Includes 7,462,000 bushels in 1928, 66,000 bushels in 1931, and 2,175,000 bushels in 1932 not harvested on account of market conditions. Price and value apply only to the harvested portion of the crop.
¹⁰ State production figures, which conform with census annual ginning enumeration, with allowance for cross State ginnings, rounded to thousands and added for United States totals. Cotton grown in Baja California, ginned in California from 1913 to 1924, has been excluded.
¹¹ Production is in running bales prior to 1899; 500-pound gross weight bales thereafter.
¹² Data for 1909 and 1910.
¹³ Area in cultivation July 1 less removal of acreage reported by the Agricultural Adjustment Administration, less abandonment on area not under contract.
¹⁴ Includes an allowance for unredeemed loans at season average price.

¹ Values are based on prices for crop-marketing season or Dec. 1 prices. See notes on "Price."

¹⁵ Received by farmers. See also notes on prices for each crop.

¹⁶ Based on the reported price of grain sorghums.

¹⁷ Equivalent solid acreage.

¹⁸ Prices are weighted average prices for the crop-marketing season, prices of beans being for cleaned beans.

¹⁹ Average for 1929 and 1930.

²⁰ Bags of 100 pounds (uncleaned).

²¹ Farm value of dry edible beans equals the price of cleaned beans applied to the production of cleaned beans rather than to the total production.

²² Average for 1924 and 1925.

²³ Weighted average prices for the crop-marketing season.

²⁴ Dec. 1 prices, 1916 to 1931; beginning 1932, weighted average prices for the crop-marketing season.

²⁵ Includes 5,436,000 pounds in 1935, 4,365,000 pounds in 1937, 3,140,000 pounds in 1938, and 2,813,000 pounds in 1939, not available for marketing because of economic conditions and the marketing agreement allotments. Prices and values are computed on the harvested crop.

¹ Values are based on prices for crop-marketing season or Dec. 1 prices. See notes on "Price."
^{2a} Received by farmers. Prices are as of Dec. 1 except as noted.
^{2b} Prices are weighted average prices for the crop-marketing season beginning 1919; Dec. 1 prices theretofore.
²⁸ Dec. 1 price of sweet sorghums for forage and hay except 1942, which is price of all sorghums for forage.
²⁹ Average for 1929 and 1930.
³⁰ Prior to 1939, data are for 7 States. Production figures include fruit consumed on farms, sold locally, and used for manufacturing, as well as that shipped; they exclude fruit which ripened on the trees but was destroyed prior to picking. Figures relate to the crop produced from the bloom of the year shown. In California the picking season usually extends from about Oct. 1 to Dec. 31 of the following year. In other States, the season begins about Oct. 1.
³¹ Prices are averages for crop-marketing season.
³² Net content of boxes varies. In California and Arizona, the approximate average is 70 lbs.; in other States, 90 lbs.
³³ Season average returns to growers. Price and value apply to entire crop exclusive of that portion donated to charity, unharvested, and/or eliminated on account of market conditions. (See note 34.) Prices are equivalent packing-house-door returns for all methods of sale and are weighted by production to obtain U. S. averages.
³⁴ Production includes the following quantities donated to charity, unharvested, and/or eliminated on account of market conditions (1,000 boxes): 1933, 977; 1934, 1,395; 1935, 614; 1936, 1,023; 1937, 1,204; 1938, 2,949; 1939, 1,236; 1940, 1,322; 1941, 745. Price and value are computed on the remaining crop.

No. 732.—COTTON AND COTTONSEED—ACREAGE, PRODUCTION, AND VALUE, BY STATES: 1911 TO 1942

NOTE.—Cotton production excludes linters. Figures for production in some States differ slightly from census figures on ginnings due to ginnings in 1 State of cotton grown in another. Where figures are not shown for the individual States, separate data are not available for the entire period but are included in the United States totals. Yields and prices for the periods are simple averages of figures for individual years. Tons are of 2,000 pounds

¹ Growth of 9 months in Louisiana and 12 months in Florida. Sugar campaign usually not ended before February in Louisiana and April in Florida, following season of growth of cane.

² Calculated by the Agricultural Adjustment Administration method. (S. R. Series 1, No. 1.)

³ Based on the ratio of 100 pounds of raw sugar to 93.46 pounds of refined sugar.

⁴ Not including sirup production. See table 744. ⁵ Preliminary.

¹ Includes Puerto Rico, Hawaii, Phil. Isls., and beginning 1910, Virgin Islands not shown separately.

² Beet sugar not converted to raw prior to 1909. Refined reduced to raw basis by multiplying by 1.07.

³ For 1900 to 1906, shipments to the United States.

⁴ Statistics for 1874 to 1880 represent exports. Normal grinding season begins Oct. 1. In 1933, production was from grindings of Oct. 1, 1933, to Dec. 31, 1934; beginning 1934, from grindings of the next calendar year.

⁵ Exports 1871 to 1911, production 1912 and subsequently. Includes production of muscovado and panna- cho, low grades of sugar mostly for domestic consumption.

⁶ Less than 500 tons.

⁷ One year only.

⁸ Not available.

⁹ Louisiana and Texas 1909 to 1923; Louisiana only 1924 to 1927; Louisiana and Florida beginning 1928.

¹ Beginning 1910, stocks on hand are taken into account. Figures for 1910-20 are for cane sugar only; 1922-34 includes stocks of raw cane sugar in all ports and beet sugar held by factories, according to trade sources. Beginning 1935, includes stocks of raw and refined sugar held by refiners, by importers and distributors of direct consumption sugar, and by beet sugar factories, as reported by the Sugar Division, U. S. Department of Agriculture.

² Beet sugar converted to raw at the rate of 1.075 through 1920.

³ Includes Hawaii, Puerto Rico, and the Philippines; Virgin Islands included beginning July 1, 1917.

⁴ No account taken of sugar imported in other forms. Imports from the Philippine Islands excluded beginning July 1, 1900, and from Virgin Islands beginning July 1, 1917; reexports deducted through 1932; imports for consumption beginning 1933.

⁵ Includes shipments to Hawaii and Puerto Rico for all years, to Alaska beginning 1933, and the Virgin Islands beginning Jan. 1, 1935. Excludes direct exports to foreign countries through customs districts of noncontiguous territories.

⁶ Sugar used in the manufacture of other commodities for export on which drawback was paid, taken into account beginning 1910.

⁷ Not available for publication.

⁸ Raw sugar converted to refined by multiplying by the following factors: For years prior to 1922, 0.9369; 1922-30, Cuba and Hawaii, 0.9358; Puerto Rico, 0.9393; Philippine Islands, 0.95; all others, 0.932; beginning 1931, Hawaii, 0.9617; Puerto Rico, Philippine Islands, and Virgin Islands, 0.946; Cuba and all others, 0.9418.

No. 753.—COTTON—PRODUCTION, CONSUMPTION, EXPORTS, IMPORTS, PRICES,
AND CARRY-OVER: 1905 TO 1943

NOTE.—All figures, except average net weight and price, in thousands of bales. Production figures relate to crop of preceding year and are compiled from individual reports of ginners. Beginning 1911, price per pound represents average price received by growers, as computed by Department of Agriculture; for earlier years, it is average price of average grade marketed in New Orleans prior to April 1 of following year. Consumption figures relate to 12 months during which crop of specified year was chiefly marketed, and not to calendar year. Export and import figures (compiled by Bureau of Foreign and Domestic Commerce through April 1941, Bureau of Census thereafter) relate to 12 months beginning Sept. 1 for years prior to 1915, and to 12 months beginning Aug. 1, thereafter. Figures for linters are included in those for consumption prior to 1909, and in export figures prior to 1915. Separate figures for linters prior to those years not available. See 1937 Statistical Abstract, table 659, for figures for years prior to 1905.

No. 763.—CORN, WHEAT, AND OATS—COMMERCIAL STOCKS, BY MONTHS: 1933-34 TO 1942-43

NOTE.—All figures in thousands of bushels. Number of pounds to a bushel: Wheat, 60; corn, 56; oats, 32. Figures represent domestic grain in store in public and private elevators at terminal markets and afloat in vessels or barges in harbors of lake and seaboard ports; they do not include grain in transit, stocks in mills or elevators attached to mills, or private stocks intended for local use. Stocks are as reported on Saturday nearest the first of each month. Official statistics were not compiled prior to January 1927. Bradstreet's visible supply is given for earlier years in the 1935 and previous issues of the Statistical Abstract.

¹ Data for grains ground represent cost.

² Grains ground relate to "Flour and other grain-mill products" industry only; production statistics include data for all industries making these products, except as noted.

³ Weight of bushel: Wheat, 60 pounds; corn and rye, 56; buckwheat and barley, 48; oats, 32.

⁴ Not available. ⁵ 196 pounds.

⁶ Includes phosphated, self-rising, and other prepared flours made in the "Flour and other grain-mill products" industry only. For 1939, blended and prepared flours made in all industries amounted to 2,584,428,000 pounds, valued at \$75,596,000; comparable figures for earlier years not available.

⁷ Rice, soybean, etc. ⁸ Not called for on schedule.

⁹ 200 pounds. ¹⁰ For brewers' use. ¹¹ 2,000 pounds.

¹² Other than cereal preparations and corn grits and hominy for human consumption; for data on these products, see under "Cereal preparations," table 786.

¹³ Not including prepared feeds, made chiefly from milled grain, in the "Prepared feeds (including mineral) for animals and fowls" industry. These amounted to 6,384,000 tons, valued at \$218,769,000, for 1939. For statistics on prepared feeds, see census report for industry mentioned.

FOREST FIRES

No. 775.—FOREST FIRES—NUMBER, AREA, AND DAMAGE: 1931 to 1942

NOTE.—Data were compiled from reports by National Forest Supervisors and from those of cooperating States, various Government bureaus, and similar sources. Data for unprotected areas are necessarily incomplete, as reliable data were not obtainable prior to organized protection. Figures for fires on Indian reservations were excluded in 1931.

¹ This table (except for National Forest areas) does not take into account the vast amount of intangible and indirect damage resulting from forest fires, such as decay of damaged timber, replacements of desirable species of trees by less desirable but more fire-resistant ones, soil deterioration and erosion, loss of wildlife, uncertain stream flow, interrupted tourist traffic, and the like.

¹ Because of incompleteness of reports, sums of figures for areas burned and for damage, by causes, for years covered by this note are less than total areas burned and total damage, as given in tables 775 and 777. See also note 1, table 775.

¹ Includes both saw timber and cordwood trees. The cubic foot volumes include the tops and limbs, but not the bark. Detailed data for cordwood trees are omitted from this table.

² Includes only timber of saw timber size. Lumber items include allowances for logging waste which might have been utilized.

³ Lumber tally measure.

⁴ This item increased to account for the probable cut of mills failing to report to the census.

⁵ A square is considered equivalent to 800 pieces.

No. 779.—LUMBER—PRODUCTION, BY KIND OF WOOD, AND AVERAGE MILL VALUE

[Data are not strictly comparable because of varying coverage from year to year. In 1942, statistics are believed to be complete, as mail returns were supplemented by field enumeration. Data for decennial census years were also supplemented by field enumeration although they are less complete than the data for 1942. In other years, results are based on mail returns, except for certain States as indicated in headnote for table 780. For a more detailed discussion of limitations applying to lumber statistics, see Census of Forest Products, 1942]

No. 782.—LATH AND SHINGLES—PRODUCTION, 1899 TO 1942, AND BY STATES, 1937 TO 1942

[Lath in thousands and shingles in squares. Shingles were reported in thousands prior to 1933 and were converted to squares on the basis of 800 shingles to the square. See headnote, table 779 for explanation of lack of comparableness of statistics, because of incomplete coverage. The effect on total production statistics for lath is not known. Data for shingles are reasonably comparable over a period of years, because of complete enumeration of Red Cedar Shingle Industry, this industry's production comprising over 90 percent of total shingle production.]

¹ Beginning 1914 includes screenings.

² Includes data for existing mills not classified as producers of pulp before 1940. In that year data for 6 mills not previously classified as producers of wood pulp were included for first time. A seventh mill was added for same reason in 1941.

³ Includes data for 25 existing mills not previously classified as producers of paper and paperboard.

⁴ Includes estimated production of insulating board for 1 mill. Estimates were made on assumption that production of this mill was proportionately the same in 1941 and 1942 as in 1943.

¹ Figures for turpentine and rosin from crude gum, 1929-30 to 1942-43, and from wood, for 1933-34 to 1942-43, relate to crop year ended Mar. 31. All other figures relate to calendar years.

² Figures compiled from data reported by establishments in Turpentine and Rosin industry.

³ Figures compiled from data reported by establishments in Wood-Distillation industry.

⁴ Not reported.

⁵ Includes, for 1909 and 1914, 18,310 gallons and 92,401 gallons, respectively, of turpentine and, for 1914, 4,495 barrels of rosin, reported by establishments engaged in manufacture of lumber and timber products.

⁶ Estimated by J. E. Lockwood; complete data not available. Figures include estimates of rosin produced from reclaimed gum, as follows: 1932-33, 33,400 barrels; 1933-34, 35,060; 1934-35, 34,000.

⁷ Includes estimates by J. E. Lockwood for production of turpentine from steam-distilled wood.

⁸ Includes data for rosin produced from reclaimed gum: For 1935-36, 54,187 barrels; 1936-37, 42,694; 1937-38, 26,271; 1938-39, 39,979; 1939-40, 39,268; 1940-41, 25,226; 1941-42, 24,706; 1942-43, 14,121.

⁹ Figures do not include data for rosin produced from reclaimed gum. See notes 6 and 8.

No. 802.—MINERAL INDUSTRIES—SUMMARY FOR THE UNITED STATES: 1919, 1929, AND 1939

NOTE.—Statistics cover producing operations only. In general, those for 1939 cover only those operations (or concerns producing crude petroleum, natural gas, and natural gasoline, and rendering oil- and gas-field services) for which total value of all products, reported principal expenses, cost of buildings, machinery, and equipment during the year, or cost of drilling and equipping wells during the year amounted to \$2,500 or more. For bituminous coal and lignite an output criterion of 1,000 tons of coal was substituted for value of all products. Statistics for the common sand and gravel industry exclude data for operations that produced less than 15,000 tons of sand and gravel unless reported principal expenses or cost of buildings, machinery, and equipment during the year amounted to \$15,000 or more. Statistics for 1929 cover, in general, only those "enterprises" for which total value of all products or cost of development work amounted to \$2,500 or more. Bituminous coal and lignite mines that produced less than 1,000 tons of coal and common sand and gravel operations that produced less than 25,000 tons of sand and gravel, were excluded. Statistics for 1919 exclude data for "enterprises" for which value of all products was less than \$500 or cost of development work was less than \$5,000. Noncommercial production of stone and sand and gravel obtained from mines or quarries operated by governmental agencies, public utilities, or by construction companies or contractors producing wholly for their own use or on contract for governmental agencies is excluded for all years.

¹ Excludes statistics for the common clay and shale, crude petroleum and natural gas, greensand, natural gasoline, peat, potash, and rock salt industries, for comparability with 1929.

² Excludes the common clay and shale, common sand and gravel, glass-sand, foundry-sand, natural sodium compounds, peat, potash, and rock salt industries, and limestone mines and quarries operated in conjunction with cement and lime plants for comparability with 1919.

³ Includes value of crude minerals produced, value added during the year by preparation processes, receipts for services performed for other concerns, and value of electric energy generated and sold.

⁴ Represents statistics for skilled and unskilled employees who perform manual labor, use tools, operate machines, handle materials, and care for property. The average numbers of wage earners were derived by adding the numbers reported for each month and dividing the sums by 12.

⁵ Represents statistics for salaried employees at operations and at central and branch offices, including officers of corporations, managers, superintendents, and other supervisory personnel, responsible professional and technical employees, and clerical employees. The number of salaried employees represents the number receiving pay on a representative or normal day or pay-roll period—for 1939, during the normal pay-roll period ending nearest Oct. 14; for 1929, on Dec. 14 or on the nearest representative day; for 1919, on Dec. 15 or on the nearest representative day. Salaries represent the total amount paid to salaried employees during the calendar year.

⁶ Represents statistics for proprietors and firm members at operations and at central and branch offices.

⁷ Census statistics not available.

⁸ For 1939 includes installation costs, which are excluded for 1929.

⁹ Statistics for 1939 and 1929 refer to equipment in use or available for use at the end of the year.

¹⁰ Includes equipment, with rating of 8.865 horsepower, operated by purchased power other than electric energy.

¹ Companies with operations in more than 1 industry are counted only once in the totals.

² See note 3, table 802. ³ See note 4, table 802. ⁴ See note 5, table 802. ⁵ See note 6, table 802.

⁶ Represents permanent additions and major alterations (including installation costs); minor additions and replacements and the cost of land are excluded.

⁷ See note 9, table 802.

⁸ Not shown because of dissimilar products.

⁹ Includes amounts received by or due contractors for services performed during the year.

¹⁰ Includes statistics for 334 salaried employees paid \$1,091,000 at central offices that served more than 1 mineral industry.

¹¹ Contractors performing oil- and gas-field services were not asked to report expenditures for supplies and materials, fuel, purchased electric energy, or contract work, and contractors performing general services for mineral industries were not asked to report expenditures for contract work. These expenditures are not included in totals shown. Expenditures by "Contract-service operations" duplicate in part the expenditures for "Contract work" reported by producing operations.

¹² Oil- and gas-field contractors were not asked to report expenditures for buildings, machinery, and equipment, and contractors performing general services for mineral industries were asked to report only combined expenditures for these items, which amounted to \$150,000. These expenditures are not included in totals shown.

¹³ Crude petroleum, 1,228,133,816 barrels (42 gallons); natural gas, 2,929,184,828 M cu. ft., of which 2,287,413,256 M cu. ft. were marketed.

¹⁴ Thousands of gallons.

¹⁵ Includes data for 58 strip-pit and culm-bank contractors.

¹⁶ Excludes, to avoid duplication, \$10,618,000 paid strip-pit and culm-bank contractors by colliery companies.

¹⁷ Tons of 2,240 pounds.

⁵ See note 6, table 802.

⁶ Represents permanent additions and major alterations (including installation costs); minor additions and replacements and the cost of land are excluded.

⁷ See note 9, table 802.

⁸ Not shown because of dissimilar products.

¹¹ Contractors performing oil- and gas-field services were not asked to report expenditures for supplies and materials, fuel, purchased electric energy, or contract work, and contractors performing general services for mineral industries were not asked to report expenditures for contract work. These expenditures are not included in totals shown. Expenditures by "Contract-service operations" duplicate in part the expenditures for "Contract work" reported by producing operations.

¹² Oil- and gas-field contractors were not asked to report expenditures for buildings, machinery, and equipment, and contractors performing general services for mineral industries were asked to report only combined expenditures for these items, which amounted to \$150,000. These expenditures are not included in totals shown.

¹⁷ Tons of 2,240 pounds.

⁴ Contractors engaged chiefly in development work for other concerns in the mineral industries; Pennsylvania anthracite strip-pit and culm-bank contractors are excluded. Statistics for contractors performing oil- and gas-field services exclude data for oil- and gas-field work performed on contract by concerns that also operated oil and gas wells for their own account unless separate reports were obtained for each of these two types of activities. Statistics are also excluded for concerns rendering oil- and gas-field services or producing crude petroleum, natural gas, or natural gasoline whose reports covering these activities indicated that neither the value of products and services rendered, nor reported principal expenses, nor cost of buildings, machinery, and equipment, nor cost of drilling and equipping wells amounted to as much as \$2,500 during 1939. Statistics for contractors performing general services for mineral industries exclude data for contractors that received or were due less than \$2,500 for work done during 1939.

⁶ Represents amounts received or due for services performed during the year.
⁷ Statistics cover, in general, only those operations that had reported principal expenses or cost of buildings, machinery, and equipment during the year of at least \$2,500; for common sand and gravel the corresponding minimum was \$15,000. Statistics include data for oil- and gas-field operations in States in which the reporting concerns had no products, provided the concerns were large enough to come within the scope of the census as defined in headnote of table 802.

No. 805.—MINERAL PRODUCTS OF THE UNITED STATES—QUANTITIES AND VALUES: 1925 TO 1942

NOTE.—Data cover continental United States and, for leading products, outlying areas. Certain of the figures represent shipments rather than quantity mined, and some of the figures for 1942 are preliminary. Total values of metallic and nonmetallic products include figures which the Bureau of Mines is not at liberty to publish and estimated figures for certain products for which data are not available. In some cases, neither quantity nor value can be shown and those products are not listed here but data for them are included in totals. On the other hand, values for certain products, such as coke, are excluded from the totals to eliminate duplication, since the values of the products derived therefrom, or of raw materials used, are accounted for under other items. Short tons are 2,000 pounds; long tons, 2,240 pounds.

¹ Figures not available or Bureau of Mines not at liberty to publish them; value included in total value of metallic or nonmetallic products.

² From both domestic and foreign ores. Beginning 1935, data represent antimonial lead produced at primary refineries from both primary and secondary sources, and are not comparable with data for prior years; estimate of value of primary antimony and lead content of antimonial lead from domestic sources included in total value of metallic products.

³ Content of antimonial lead. Value of the antimony in antimonial lead excluded from total value.

⁴ Largely from foreign ore beginning 1935. Value not included in total value. Bureau of Mines not at liberty to publish value figures or quantity figures for 1940-1942.

⁵ Value not included in total value; see headnote.

⁶ Product from domestic ores only.

⁷ Value does not include premiums paid miners by the Government. Total premium for copper, lead, and zinc amounted to approximately \$22,500,000.

⁸ According to Bureau of the Mint; valued at \$20.67+ per ounce through 1930, at \$35 per ounce in 1935 and subsequent years.

⁹ Figures not available. Value of products derived therefrom, or of raw materials used, is included elsewhere.

¹⁰ Value calculated at nominal price, 27 cents per pound.

¹¹ According to Bureau of the Mint.

¹² Less than \$500.

¹³ Figures obtained through cooperation with Bureau of the Census. For 1940, total is estimate based on figures issued by Bureau of the Census as somewhat incomplete. For 1941-42 there was no canvass; total for clay products is estimate by Bureau of Mines; no estimate was made for sand-lime brick. Beginning 1937, value of clay products exclude values of pottery and refractories.

¹⁴ Includes brown coal and lignite, and anthracite mined elsewhere than in Pennsylvania.

¹⁵ Quantities as reported by Department of the Interior, National Bituminous Coal Division; values include selling expenses.

¹⁶ Gypsum mined: After 1936, value of crude at mine; for earlier years, value as sold (crude and calcined).

¹⁷ Figures cover fiscal year ended June 30 of year stated.

¹⁸ Includes mica recovered by grinding mica schist; excluded in prior years shown.

¹⁹ Figures not available; value of iron ore sold for paint included in total value of nonmetallic products.

²⁰ Sublimed blue lead, sublimed white lead, leaded zinc oxide, and zinc oxide.

²¹ Figures not available.

²² No canvass. Estimate of value included in total value of nonmetallic products.

²³ Includes soapstone used as dimension stone.

²⁴ From copper and zinc smelters and zinc roasters and from roasting of high-sulfide gold and silver concentrates.

²⁵ For 1925 and 1930, figures exclude soapstone. For 1935 and thereafter, figures cover talc, pyrophyllite, and ground soapstone. Dimension soapstone is included in stone. Value of soapstone in 1925 and 1930 is included in total value of nonmetallic products; Bureau of Mines not at liberty to publish figures.

No. 806.—MINERAL PRODUCTION, BY STATES AND FOR ALASKA: 1935 TO 1941

NOTE.—The sum of the State totals in the table below does not agree with the total for the United States given in tables 800 and 805 chiefly because of the following reasons: (1) Figures for certain of the products included in the United States total are not available by States of origin; (2) the use of iron ore values in State totals and pig iron values in United States total; (3) the use of mine figures for gold, silver, copper, lead, and zinc in the State totals and mint and smelter figures in the United States total; and (4) the inclusion of estimates in the United States total for a few products for which no canvass has been conducted for many years and for which no estimate by States is made.

No. 812.—STEEL, WIRE AND WIRE PRODUCTS, TIN PLATE AND TERNEPLATE, AND CAST-IRON PIPE AND FITTINGS—PRODUCTION: 1929, 1937, AND 1939

NOTE.—The overlapping of the industries shown in this table results in considerable duplication in tonnages shown. The products chiefly used further in manufacture are wire rods, plates and sheets, black plates for tinning, and skelp. The figures under "Wire," "Tin and terneplate," and "Cast-iron pipe and fittings" include data for products of these departments of steel works and rolling mills and of all other industries producing these commodities.

¹ Figures include production of steel castings in "Steel castings" industry and a small amount produced in other industries, and for this reason exceed sum of items shown below. ² Of 2,240 pounds.
³ Made in departments of steel works and rolling mills. Total production of steel castings, as shown in census report "Steel castings," was as follows: 1929, 1,455,000 tons; 1937, 1,249,000 tons; 1939, 734,000 tons.
⁴ Figures for 1937 and 1939 include minor duplications in the items carrying note 6, because certain products were transferred or sold to other plants within the industry and therefore are included under 2 items.
⁵ Not including rails rerolled by makers of ingots from new seconds. Figure for 1939 combined with figure for rails to avoid disclosing data of a company or corporation. ⁶ See note 4.
⁷ No data or not called for on schedule. ⁸ Includes data for small amounts of stainless steel rods.
⁹ Included in "Merchant bars, etc., steel."
¹⁰ Not reported separately; included in figures for other types of plates and sheets.
¹¹ All iron and steel wire, including that subsequently galvanized, otherwise coated, and cold rolled.
¹² Of 2,000 pounds. ¹³ Includes contract and custom work.
¹⁴ Aluminum, nickel, and alloys. ¹⁵ See note 18.
¹⁶ For cut production, see census report "Principal manufactures from rolling-mill products."
¹⁷ Of 100 pounds.
¹⁸ Represents the following values for which quantities were not reported: Other wire cloth, 1929, \$1,559,000. Motor-vehicle skid chains, 1929, \$2,504,000; 1937, \$785,000; 1939, \$181,000. Other nonferrous wire, 1937, \$214,000; 1939, \$526,000. Concrete reinforcement wire, 1937, \$161,000; 1939, \$74,000. Wire cloth of copper and bronze, 1937, \$224,000; 1939, \$289,000. Wire cloth of other metals, 1937, \$275,000; 1939, \$255,000. Staples, 1939, \$123,000.

No. 815.—IRON AND STEEL—AGGREGATE EXPORTS: 1890 TO 1941

NOTE.—This table covers products listed in table 816 and therefore does not include data for highly elaborated products of iron and steel. Value figures for 1921 and prior years exclude, and those for 1922 and subsequent years include, data for small items for which quantity figures are not available. Data for ferromanganese are included for all years. Data for steam and hot-water heating boilers and radiators, formerly classified as heavy iron and steel products, have been excluded for 1922 and subsequent years.

No. 820.—COPPER—PRODUCTION, EXPORTS, IMPORTS, AND CONSUMPTION:
1910 TO 1942

NOTE.—All quantities except ore produced in millions and tenths of millions of pounds. Production figures include continental United States and Alaska. Owing to the varying stages of production, the stocks in different classes of hands, the redistribution of copper previously purchased, the recovery and use of old copper, etc., calculations of consumption are somewhat uncertain. The American Bureau of Metal Statistics presents consumption estimates rather widely different from those given below. Consumption as shown represents the quantity of copper withdrawn on domestic account, but not actual domestic consumption, as no account is taken of consumers' stocks.

NOTE.—Smelter output as here given represents the production of unrefined copper from domestic (including Alaskan) ores. Some copper ore is imported and smelted in this country, but this appears only in the figures of refined copper from imported material in table 820.

No. 823.—COPPER—EXPORTS AND IMPORTS: 1891 TO 1941

NOTE.—Exports are those classed as "domestic" in the foreign trade statistics but include copper smelted or refined in the United States from imported ore or unrefined metal. Values include all forms of copper. Quantities represent all copper except the small item, "Other manufactures." Copper content of exports of ore for years 1891-1915 and of imports for years 1894-1903 was estimated.

² Data under supply are as of Jan. 1; under deductions, as of Dec. 31.

³ Stocks of pigs, bars, etc., in bonded warehouse not separately reported after April 1930; included with base bullion. For purpose of calculating apparent deliveries in 1930 and subsequent years, stocks in warehouse are estimated to have remained unchanged from beginning of the year.

⁴ Includes some old, reclaimed, and scrap lead.

⁵ Figures cover Jan. to Sept. inclusive.

⁶ Includes small quantities of foreign lead reexported for all years shown except 1939 and 1941.

**No. 827.—NONFERROUS METALS AND ALLOYS, AND FINISHED PRODUCTS THERE-
OF—PRODUCTION, BY KIND: 1935, 1937, AND 1939**

NOTE.—Table shows products made for sale and interplant transfer, excluding those made for consumption in same works. Data represent production of commodities specified, whether made as primary or as secondary products by industries reporting them. The census designations of industries in which these commodities are made are as follows: "Alloying; and rolling and drawing of nonferrous metals, except aluminum;" "Secondary smelting and refining of nonferrous metals, not elsewhere classified;" "Nonferrous metal foundries (except aluminum);" and "Nonferrous metal products not elsewhere classified." No data are included for production of copper, lead, zinc, and other nonferrous metals from the ore or of secondary metals by establishments engaged in primary smelting and refining of nonferrous metals.

No. 830.—GOLD AND SILVER—PRODUCTION IN CONTINENTAL UNITED STATES, ALASKA, PUERTO RICO, AND PHILIPPINE ISLANDS: 1792 TO 1942

NOTE.—The value of gold, in terms of money, being at a fixed rate, is not shown in the table. Gold is valued at \$20.67+ per fine troy ounce from 1837 through 1933. In 1933, however, varying higher prices prevailed subsequent to the Executive order of Aug. 29. The value of gold production for 1933, as computed by the Bureau of Mines, was \$65,338,000, including \$52,842,000 calculated at legal coinage value (\$20.67+ per ounce) plus \$12,496,000 premium calculated at average weighted price (\$25.56 per ounce). On Jan. 31, 1934, the legal value of gold was fixed at \$35 per fine ounce. The value of silver given is commercial value, except for 1921 to June 1923 and beginning 1934 (see footnotes 1 and 2), which has differed materially from coinage value.

No. 832.—SILVER—PRICES, LONDON AND NEW YORK, AND VALUE IN THE DOLLAR: 1835 TO 1942

NOTE.—The London price is converted to the basis of the ounce 1,000 fine and converted to American money at par of exchange through 1930; thereafter, at the current rate of exchange. London quotations are in depreciated currency after Sept. 21, 1931, also in some prior year periods, including 1918 to 1924. New York quotations are in depreciated currency after early March 1933. The commercial ratio is computed on the basis of London quotations through 1914; thereafter, on the basis of the New York average price. Beginning with 1934 the monetary value of gold is \$35.00 per fine ounce as compared with \$20.67 in previous years. The value of fine silver (371.4 grains) in the dollar is computed on the basis of London quotations through 1917; thereafter, on the basis of the New York average price.

No. 835.—COAL—PRODUCTION, 1821 TO 1942, AND BY STATES, 1916 TO 1942

NOTE.—Quantities in thousands of short tons (2,000 pounds); values in thousands of dollars. Includes coal consumed at mines. Figures for anthracite relate to Pennsylvania output only; those for bituminous relate to continental United States and Alaska. Bituminous coal includes lignite and small amounts of anthracite outside Pennsylvania. Comparatively little coal is held in stock at the mines.

¹ Exclusive of product of mines producing less than 1,000 tons. ² Estimated from various sources; includes selling expenses, except for 1939, when such expenses were excluded except in a few cases.

³ Preliminary.

⁴ Includes Oklahoma.

⁵ Includes Missouri.

⁶ Included with Kansas.

⁷ Includes South Dakota.

⁸ Included with Arkansas.

¹ Figures for bituminous coal represent average value per ton less selling expense (Bur. of Mines series) prior to 1937; thereafter, average gross realization including selling expense (Bit. Coal Div. series).
² Based on total production as shown in table 835.
³ Calculated at 303.5 working days in the anthracite field and 308 working days in the bituminous field.
⁴ Of 2,000 pounds. ⁵ Not available. ⁶ 1891. ⁷ 1896.

¹ Total limited to classes shown. Bunker-fuel statistics not available for publication.

² Geological Survey and Federal Power Commission. Represents consumption by public utility power plants in power generation, including a small quantity of coke amounting to approximately 100,000 tons annually.

³ Association of American Railroads. Represents consumption by class I railways for all uses, including locomotive, powerhouse, ship, and station fuel. The I. C. C. reports that in 1941 consumption for all uses by class I line-haul railways plus purchases for class II and class III railways, plus purchases by all switching and terminal companies combined, was 103,228,446 net tons of bituminous coal and lignite. Similar data not yet available for 1942.

⁴ Estimates based upon reports collected jointly by National Association of Purchasing Agents and Bituminous Coal Division from a selected list of representative manufacturing plants. ⁵ Preliminary.

No. 841.—NATURAL GAS AND NATURAL GASOLINE—PRODUCTION, 1906 TO 1942, AND BY STATES, 1925 TO 1942

NOTE.—Quantities of gas in millions of cubic feet, of gasoline in thousands of gallons; values in thousands of dollars. Production figures for gas refer only to that marketed, in addition to which considerable quantities are used by producers, and large quantities are wasted or lost. Values given are at the point of consumption. Consumption figures by States differ greatly from production figures by reason of interstate transportation.

No. 842.—MANUFACTURED-GAS INDUSTRY—FUEL CONSUMED, BY KIND AND BY USE: 1935 TO 1942

NOTE.—Coal and coke in thousands of tons of 2,000 pounds; oil in thousands of gallons. Companies formerly distributing manufactured gas but which were distributing natural gas at the beginning of 1942 have been excluded from the figures for all years. The figures do not include fuels used in production of coke oven gas which is purchased by gas companies from coke and steel companies for public distribution.

No. 843.—MANUFACTURED-GAS AND NATURAL-GAS INDUSTRIES—SUMMARY: 1935 TO 1942

NOTE.—Population served and number of customers in thousands, gas produced, purchased, and sold in millions of cubic feet; revenue in thousands of dollars. Companies formerly distributing manufactured gas but which were distributing natural gas at the beginning of 1942 have been excluded from the figures for manufactured gas and included with those for natural gas for all years shown in this table. Companies selling mixed manufactured and natural gas are included with data for manufactured gas. Figures for natural gas do not include natural gas used in field operations or in the manufacture of carbon black, or gas used by distributing companies in the conduct of their gas operations.

¹ M, manufactured; N, natural; X, mixed. ² 1 therm equals 100,000 British thermal units.
³ Automatic storage or instantaneous water heater. ⁴ Rate designed to encourage greater use of gas.
⁵ The "Objective" rate is not applicable for customers using 10.6 therms for the reason that the bill would be higher than that computed under the "Immediate" rate.
⁶ Prices include 2-percent sales tax. ⁷ Prices include 3-percent sales tax.
⁸ Rates reported in March 1942 were retroactive to September 15, 1941.
⁹ Prices include 1-percent sales tax. ¹⁰ Bronx, Manhattan, and Queens Boroughs.

30. MANUFACTURES

[Statistics in this section relate to continental United States except as noted. For additional statistics on manufactured food products, mineral products, and forest products, see sections 25, 26, 27, 28, and 29]

GENERAL NOTE.—The Census of Manufactures was taken decennially prior to 1899 and for each fifth year thereafter through 1919, and has been taken every second year from 1921 to 1939. However, the Census of Manufactures for 1941 has been abandoned as directed by Executive Order No. 9152, in the interests of more important work related to the Nation's war effort. The censuses for 1904, 1909, 1914, and 1919 covered all factories or plants whose products were valued at \$500 or more, but, beginning with 1921, the minimum limit has been \$5,000. As a rule, the term "establishment" signifies a single plant or factory, but in some cases an establishment operates two or more factories and in a few cases two or more departments of a single plant or factory are treated as separate establishments. At the censuses for 1937 and 1939, however, an establishment operating two or more factories was counted as two or more establishments. The total number of establishments was increased approximately 2,000 by this change.

"Value of products" represents selling value at the plant or factory. Because of the use of the products of some establishments as materials for others, the total cost of materials and the total value of products for all industries in a given group, and for all groups in the aggregate, include much duplication, estimated at roughly one-third of the gross value of products. Such duplication is not, however, found to any great extent within individual industries.

The 1939 Census of Manufactures questionnaire, for the first time, called for personnel employed in distribution, construction, etc., separately from the manufacturing employees of the plants, and therefore the data for earlier years probably are not strictly comparable with those for 1939. It is not known how many of the wage earners and the salaried employees reported at previous censuses were engaged in distribution and construction and how many were engaged in manufacturing.

It is sometimes necessary, for various reasons but chiefly because of changes in census classification, to make adjustments in the figures for earlier census years. Adjustments have been made in the figures beginning with 1899 as a result of the exclusion from the Census of Manufactures since 1929 of the industries "Coffee and spice, roasting and grinding," "Flax and hemp, dressed," "Gas, illuminating and heating," "Grindstones," "Motion pictures, not including projection in theaters," "Peanuts, walnuts, and other nuts, processed or shelled," and "Railroad repair shops" (both steam and electric).

Detailed quantity and value figures for products of selected manufacturing industries are presented in certain of the census tables in this section and in sections 25, 26, 27, and 29. The "total value" figures for the respective industries, as given in those tables, differ from the values of products of the corresponding industries, as given in table 876, because of the inclusion in the product-value totals in those tables, but not in the values of products for the corresponding industries in table 876, of data for the respective classes of commodities made as minor or secondary products by establishments engaged primarily in other lines of manufacture.

¹ Value of products less cost of materials, containers, fuel, and purchased electric energy.

² For all establishments having products valued at \$500 or more.

³ Reduced to gold basis.

⁴ For all establishments having products valued at \$5,000 or more.

⁵ Includes cost of contract work.

⁶ Calculated by subtracting sum of cost of materials, containers, fuel, purchased electric energy, and cost of contract work from value of products. Not strictly comparable with years prior to 1935.

¹ Because of the change from \$500 to \$5,000 in the minimum-value-of-products limit, the "Number of establishments reporting power equipment" figures for 1919 and earlier years are not comparable with those for 1929 and 1939. This change did not, however, materially impair the comparableness of the figures for the other items in this table.

² Returns for "Logging camps and logging contractors (not operating mills)," numbering 967, were excluded from power tabulations.

³ Includes 47,192 horsepower reported as other owned power, not distributed by type of prime mover.

⁴ Includes 28,213 horsepower reported as other owned power, not distributed by type of prime mover.

⁵ Figures for "Steam engines" include data for "Steam turbines," not reported separately.

⁶ Figures for "Other internal-combustion engines" include data for "Diesel and semi-Diesel engines," not reported separately.

⁷ Includes data for water motors.

No. 875.—INVENTORIES IN THE HANDS OF MANUFACTURERS AT THE BEGINNING AND END OF 1937 AND 1939, AND BY INDUSTRY GROUPS, 1939

NOTE.—In thousands of dollars. Statistics on inventories were not collected for any of the industries in the printing and publishing group, nor were inventory statistics collected for contract shops classified in the textile industries. The value of products of those industries for which inventory data were not collected amounted to \$2,846,966,000.

No. 876.—MANUFACTURES—SUMMARY FOR INDUSTRY GROUPS, 1929 TO 1939,
AND FOR SUBGROUPS AND INDUSTRIES, 1937 AND 1939

NOTE.—The figures given in this table do not represent exactly the numbers of wage earners, values of products, etc., assignable to the classes of commodities from which the industries derive their names, as it is necessary for census purposes to classify each establishment as a whole in some one industry, according to its product of chief value, although in many cases a single establishment manufactures two or more classes of commodities. See also general note, p. 766.

[Data for chemicals shown are restricted to a selected group comprised for most part of inorganic chemicals and related products which are sufficiently important economically to justify publication. A few important items are excluded for security reasons or because comparable data are not available. Data for production by Government-owned arsenals, ordnance works, and certain plants operated for Government by private industry are excluded, except that data for chemicals manufactured by Tennessee Valley Authority are included.]

¹ Data collected in the 1939 Census were published in square yards, although the major fabric classifications included data in terms of linear yards.² In the gray except blankets and blanketings. All 1943 figures represent goods in the gray.³ Includes outing and interlining flannels, canton flannels, moleskin (heavy-filling sateens), duvetyns, and suede.⁴ For the production of wool-and-cotton mixed blankets and blanketing containing 25 to 98 percent wool, see table 881.⁵ 1939 data are for finished fabrics. 1943 data are for goods in the gray.⁶ Data not available.⁷ Includes blanketings.⁸ Includes fabrics containing 51 percent or more cotton, by weight, balance rayon.

No. 881.—WOOLEN AND WORSTED MANUFACTURES—PRODUCTION, BY KIND:
1939, 1942, AND 1943

[Woolen and worsted woven goods are defined as fabrics containing by weight 25 percent or more wool fiber. Wool fiber means fibers as defined by the Wool Products Labeling Act of 1939. Data beginning with 1942 are not strictly comparable with those published in the census of Manufactures for 1939. Detailed information on military fabrics was required by the war agencies, and in most cases, information was collected by type of fabric rather than by end use. Consultations with the military agencies provided the basis for estimating the end use of each type of fabric. Fortunately, for purposes of comparison with 1939, the more important military fabrics were generally produced for a single end use in terms of the 1939 classification. The estimates occurred primarily in the men's wear fabrics, and involved less than 15 percent of the total apparel fabrics produced. Production figures of women's and children's wear fabrics were collected by weight of fabric instead of end use. In the Census of Manufactures for 1939 data were collected from this industry on a square-yard basis; the present series requires the reporting of linear yards, with narrow fabrics converted to a 54-inch width. The 1939 data have been converted to a 54-inch linear yard measure by dividing the quantity of square yards by $1\frac{1}{2}$, excepting blankets which were converted to a 72-inch linear yard measure by dividing the quantities of square yards by 2]

¹ The measure used in 1939 was square yards. Data have been converted to a 54-inch linear yard measure, excepting blankets which have been converted to a 72-inch linear yard measure. Data for 1942 and 1943 on narrow fabrics were converted by reporting companies to a 54-inch linear yard measure.

² Includes data for military fabrics which were reported by types. Estimates as to end use classification were made on less than 15 percent of the total quantity of apparel fabrics.

³ Data for 1939 and for 1942 were collected as to end use. 1943 data were collected by weight of fabric.

⁴ Data not available.

⁵ An unknown quantity of these fabrics are included in the women's and children's wear classifications.

⁶ Includes data for papermakers' felts which were not collected separately for 1942.

No. 882.—RAYON MANUFACTURES—QUARTERLY PRODUCTION, BY TYPE: JULY-DECEMBER, 1943

[Data cover production of rayon broad woven fabrics containing by weight 51 percent or more rayon. The fabrics reported are either 100 percent rayon or rayon mixtures containing 51 percent or more rayon with the addition of cotton or other fibers. However, if wool fibers are added to the extent of 25 percent or more, they are classed as woolen mixtures and are not included with the fabrics listed in this table. After the Census of Manufactures for 1939, detailed data for this industry were not compiled until 1943. These data were collected to meet requirements of war agencies and are not comparable with Census of Manufactures data. Figures are preliminary.]

¹ The inclusion of "Books and pamphlets printed for publication by others," "Maps, atlases and globe covers made for others," "Greeting cards printed for others," "Newspapers and periodicals printed for publication by others," etc. results in duplication in the aggregate value and receipts, as follows: 1937, \$158,466,000; 1939, \$201,627,000. (No separate data available for greeting cards for 1937.) These amounts represent receipts by commercial printers for work done by them for other printers or for publishers, and consequently enter twice into the aggregate value and receipts.

² Includes "Pamphlets printed for publication by others."

³ No data.

⁴ Included with "Other commercial printing."

⁵ Included with "Greeting cards."

⁶ In addition, labels, tags, and seals were produced by methods other than letterpress, as follows: 1937, \$25,693,000; 1939, \$29,944,000. 1929 figures are not available.

NO. 890.—MACHINERY—VALUE OF THE PRINCIPAL CLASSES MANUFACTURED

NOTE.—In thousands of dollars. The various classes of machinery listed are products of a number of industries, such as "Industrial machinery, not elsewhere classified," "Motor vehicles, motor-vehicle bodies, parts and accessories," "Agricultural machinery (except tractors)," etc. This table is not an industry presentation, but a special presentation giving value of products for groups designated. The values are in part duplicated in other tables in this Abstract such as tables 891 to 896.

No. 898.—COTTON SPINDLES, COTTON CONSUMPTION, AND STOCKS

NOTE.—The statistics for 1915 to 1943 relate to the 12 months ended July 31 and those for prior years to the 12 months ended Aug. 31. Consumption and stocks are expressed in running bales, counting round as half bales, except that all figures, 1840 to 1870, inclusive, and foreign cotton for all years are in equivalent 500-pound bales. The number of active cotton spindles represents spindles operated at some time during the year, and is not as satisfactory a measure of activity of the industry as active spindle hours.

No. 903.—TOBACCO, LEAF—AMOUNTS CONSUMED IN THE MANUFACTURE OF CIGARS, CIGARETTES, CHEWING AND SMOKING TOBACCO, AND SNUFF

NOTE.—All figures in thousands of pounds. Figures represent the equivalent in unstemmed leaf tobacco of stemmed leaf or scraps, cuttings, and clippings. In the following table the tobacco used in the manufacture of cigars and cigarettes was converted on the basis of 3 pounds of stemmed leaf or scraps, etc., to 4 pounds of unstemmed beginning 1915 (conversion prior to 1915 was at the ratio of 3 to 5) and of tobacco and snuff beginning 1903. For 1896 to 1902, tobacco used in manufactured tobacco and snuff was shown only under two heads, namely "leaf" and "scraps." It is probable that stemmed leaf was included with unstemmed tobacco under the head of "leaf" without the one kind being converted to the equivalent in the other. The conversion ratio of 3 to 4 was applied only to "scraps" for these years. Data exclude tobacco used in bonded manufacturing warehouses (see table 902).

¹ Barrels of not more than 31 wine gallons. ² Excludes ethyl alcohol.

³ A tax gallon for spirits of 100 proof or over is equivalent to the proof gallon. For spirits of less than 100 proof the tax gallon is equivalent to the wine gallon.

⁴ Excludes high-proof spirits and unfinished spirits produced at registered distilleries. Not available for publication.

⁵ Production represents total amount removed from fermenters, including distilling material (standard wines produced with excessive water or residue materials); excluded from stock on hand June 30.

⁶ Standard United States gallon.

⁷ Includes champagne, other sparkling wines, and artificially carbonated wines.

⁸ Tax is payable on each 1/4-pint or fraction thereof in each bottle or container.

No. 907.—MOTION-PICTURE PRODUCTION—SUMMARY: 1921 TO 1939

NOTE.—All money figures are in thousands of dollars. Data represent the activities of the motion-picture studios and laboratories. They do not include the distribution of films and their projection in theaters. No data are included for establishments which reported less than \$5,000 as the cost of work done. The motion-picture industry has been canvassed, since 1921, in connection with the Biennial Census of Manufactures. It is not, however, a manufacturing industry, but was treated as such prior to 1931.

¹ Includes cost of studio supplies, containers for films, fuel, and purchased electric energy.

² Data cover "productive employees" only. These include all wage earners and a part, but not all, of the salaried employees. Figures are not, therefore, comparable with either the wage-earner figures or with the total number of persons engaged. Data for other years cover all classes of employees.

³ Does not include data for salaried officers of corporations.

⁴ Data incomplete.

⁵ "News reels" included with "advertising."

⁶ Figure for "industrial" included in that for "other films."

⁷ Combined to avoid disclosing approximations of data for individual establishments.

No. 908.—ALASKA—MANUFACTURES, BY INDUSTRIES: 1899 TO 1939

NOTE.—The figures for 1939 do not include data for plants reporting products valued at less than \$2,000; those for earlier years cover all plants having products valued at \$500 or more. This increase in the minimum value-of-products limit resulted in some reduction in the "Number of establishments" reported as compared with what it would have been had the minimum of \$500 been retained, but did not seriously impair the comparableness of the figures for 1939 with those for earlier years. Comparable figures for earlier years are given for all industries for which such figures are available.

¹ Figures include patents for inventions, designs, and reissues of patents. Includes applications without fees.

² Data are for period from July 28, 1836, to Dec. 31, 1850, except as otherwise specified.

³ Data are for 11 years beginning 1840; records prior to this date are not available.

⁴ Data are for 8 years beginning 1843.

⁵ Data are for 13 years beginning 1838.

⁶ Data are for the year 1870.

⁷ Data are for 7 years beginning 1874.

⁸ Registration of labels suspended from May 27, 1891, to June 9, 1896.

⁹ Data are for 8 years; first print registered Mar. 7, 1893.

¹⁰ Data are for the year 1925.

¹¹ Figures for 1940 are for the six-months period ended June 30, 1940. On July 1, 1940, jurisdiction of prints and labels was transferred to the Copyright Office, Library of Congress, and data concerning them are compiled by that organization.

31. DISTRIBUTION, SERVICES, AND HOTELS

[Data in this section relate to continental United States]

No. 912.—MANUFACTURERS' SALES—DISTRIBUTION, BY PRIMARY CHANNELS, BY INDUSTRY GROUPS: 1929, 1935, AND 1939

NOTE.—No data are included for the following classes of industries: (1) Those in which no sales were made, the plants being maintained for the purpose of making repairs; (2) those in which plants were engaged primarily in performing labor on materials owned by others so that their sales represented sales of services rather than commodities. This table is limited to industries for which the 1929, 1935, and 1939 figures are directly comparable, whereas table 913 covers all industries for which 1939 figures are available. For comparative purposes, data covering direct export are excluded.

¹ Includes sales of certain milk dealers in the amount of \$130,000,000, not included in tables 921, 924, and 926. Data for these concerns were received too late for inclusion in summary tables for 1929.

² Much of the increase in sales of filling stations from 1929 to 1939 is offset by the decrease in commodity sales of garages which are included in the census of service establishments, 1939.

¹ Figures for 1935 revised to exclude service garages; data to adjust 1929 figures not available.

² Represents, in addition to chain data shown in tables 924 and 925, data for multiunit organizations with 4 or more retail units, such as public utility stores, State liquor stores, direct selling (house-to-house), and other lesser types.

³ Not strictly comparable with previous years; a schedule form provided for reporting warehouse operations for 1939 resulted in the receipt of a greater number of separate reports.

⁴ Data not available.

⁵ Includes estimates for a small number of warehouses for which billings were not reported.

No. 928.—SALES BY CHAIN STORES—INDEXES OF VALUES, 1938 TO 1942, AND BY MONTHS, 1942 AND 1943

NOTE.—The combined index for all groups includes the apparel chains shown separately in the table, 5 grocery chains, 6 variety chains, 2 drug chains, and 3 shoe chains. Indexes are based on daily average sales. Each monthly index is expressed as a percentage of the average for the same month of the base period. Allowance for the fluctuating date of Easter is made in the case of apparel, variety, and shoe chains. No allowance has been made for changes in the number of stores operated.

No. 929.—SALES BY SELECTED GROUPS OF RETAIL OUTLETS—INDEXES OF DOLLAR VALUES, 1935 TO 1942, AND BY MONTHS, 1942 AND 1943

NOTE.—Indexes of automobile sales are based on unit sales figures reported monthly to the Automobile Manufacturers' Association, which represent over 95 percent of all dealers' sales. The unit sales figures are converted to dollar volume by the use of a computed "average realized price." Indexes of sales in small towns and rural areas are based on figures furnished by three mail-order companies for sales by mail only and by a large group of chain units operating in small towns and cities which serve the rural population. Sales of reporting concerns represent about one-fourth of all general merchandise sales in places of less than 30,000 inhabitants. Indexes of both variety store sales and grocery chain store sales are based on figures furnished by chain organizations doing more than 70 percent of the business in the respective fields. For the variety store index adjustment has been made for changes in the number of stores operated by the companies so that the index reflects sales changes for a constant number of stores. All indexes are computed from dollar sales reduced to a daily average basis. In computing the index of automobile sales, equal weight is given to all days of the month and for the shifting date of new model introduction, while in computing the other three indexes, allowance is made for the varying number of business days in the months and the varying sales importance of the different days of the week. The monthly indexes are adjusted for seasonal changes and, in addition, the variety-store index is adjusted for the changing date of Easter.

[Daily average basis. 1935-39=100 for first 3 columns; 1929-31=100 for last column]

No. 931.—SALES BY DEPARTMENT STORES—INDEXES OF VALUES, BY FEDERAL RESERVE DISTRICTS, 1924 TO 1942, AND BY MONTHS, 1940 TO 1943

NOTE.—1935-1939 average=100, except as indicated. Compiled from reports of about 240 to 560 firms prior to 1941; in 1941, the sample was expanded to cover about 1,300 stores. Indexes for the United States have been adjusted for variations in number of firms reporting and monthly indexes for the varying number of business days in the different months, for seasonal changes, and for the effect of the shifting date of Easter. These adjustments do not apply uniformly to the indexes by districts.

¹ Employees and pay roll include paid executives of corporations but not number and compensation of proprietors of unincorporated businesses.

² Statistics for 1935, adjusted for comparison, are as follows: Number of establishments, 631,309; receipts, \$3,000,699,000. The adjustment was made by revising the original 1935 figures to include certain kinds of business that were not included in the Service Census but were published in other census reports and by excluding others which were within the scope of the 1935 census but were omitted from the 1939 census. For a comparison of the two items by industries, see source.

³ For figures for earlier years, see table 934, p. 859.

⁴ Includes manufacturing plants with products valued at less than \$5,000 and therefore not covered by the Census of Manufactures.

No. 933.—SERVICE ESTABLISHMENTS—SUMMARY, BY STATES: 1939

NOTE.—The census of service establishments covers a heterogeneous group of establishments (see table 932) engaged primarily in the sale of service, as distinguished from establishments dealing in merchandise. The professional field, the financial, educational, transportation, construction, and diverse other fields of business activity, many of which are covered elsewhere, are not included. Owing to differences in the scope of the 1935 and 1939 censuses of service establishments, the aggregates for 1939 are not comparable with those for 1935 as published in the 1937-40 issues of the Abstract.

No. 934.—POWER LAUNDRIES, CLEANING AND DYEING ESTABLISHMENTS, AND RUG CLEANING ESTABLISHMENTS—SUMMARY: 1919 TO 1939

NOTE.—All money figures in thousands of dollars. Statistics cover establishments reporting receipts of \$5,000 or more, except for 1939 figures in italics, which represent establishments reporting receipts of \$100 or more. The Census of Business for 1939 classified the establishments shown in this table as service establishments and covered those reporting receipts of \$100 or more. See also table 932 for statistics for 1939. Statistics for 1935 and earlier years were compiled in connection with the Census of Manufactures. Rug cleaning was treated, in general, as an activity of the power laundry industry for 1929 and earlier years.

No. 935.—HOTELS—SUMMARY, 1929 TO 1939, AND BY SIZE, 1939

NOTE.—The census coverage of hotels is restricted, in the main, to establishments which are designated as hotels and which provide hotel accommodations as their major business activity. For 1935 and 1939, the canvass was limited to hotels having at least 6 guest rooms or having receipts from room rentals amounting to at least \$500 for a full year's operations. Because of differences in coverage for 1929, 1933, 1935, and 1939, comparable data are available only for year-round hotels having 25 or more guest rooms.

32. CONSTRUCTION AND HOUSING

[Data in this section relate to continental United States]

No. 938.—CONSTRUCTION CONTRACTS AWARDED IN 37 STATES—VALUE OF CONSTRUCTION AND FLOOR SPACE OF BUILDINGS, BY CLASS OF CONSTRUCTION: 1925 TO 1942

NOTE.—For State figures, see table 939. Public works and public utilities cover some projects not measurable in terms of floor space, such as highways, pipe lines, subways, etc. Statistics for the 37 States were not compiled for years prior to 1925, but available figures covering a varying number of States for earlier years have been published in the 1932 and previous issues of the Statistical Abstract. Figures for the individual States and districts in table 939 represent the value of construction contracts awarded in the States and districts where the work was actually done.

[Values in millions and tenths of millions of dollars; floor space in thousands of square feet]

¹ Owing to change in classification, data for airports have been excluded from "Commercial" class and included with "Public utilities" for 1930 and subsequent years. Separate figures for airports are not available for years prior to 1930.

² Owing to change in classification, figures for "Industrial" class exclude data for pipe lines for 1929 and subsequent years (separate figures not available for years prior to 1929), which data are included with those for "Public utilities."

³ Figures exclude data for 23 projects, valued at \$29,551,900, for which data by class of construction are not available. These projects were under Civil Works Program, which was not in existence after March 1934.

No. 941.—CONSTRUCTION CONTRACTS AWARDED—INDEXES OF VALUE: 1919 TO 1943

NOTE.—1923-25 average=100. Indexes are derived from monthly figures of construction contracts awarded reported by the F. W. Dodge Corporation. Reports covered 37 States beginning with May 1924 and a varying number for earlier years. In order to obtain comparable figures from 1919 to date, the total value of construction contracts awarded in 37 States was estimated for January 1919 through April 1924. Seasonal adjustments were computed separately for "residential" and "all other" types of construction and the two series combined. The indexes are based on a 3-month moving average, centered at the middle month. For a more detailed description of the indexes, see the Federal Reserve Bulletin for July 1931.

No. 944.—BUILDING PERMITS ISSUED—NUMBER AND PERMIT VALUATION OF BUILDINGS, FOR PRINCIPAL CITIES: 1938 TO 1942

NOTE.—Figures cover new buildings and repairs to old buildings, but exclude data for installation permits (those for installing boilers, signs, etc.) which are not strictly building operations. Although installation permits are rather numerous, they represent a small dollar value. The quantity figures represent the number of buildings covered by permits issued (new construction and repairs, etc.) rather than the number of permits. Buildings authorized by permit are not always constructed, and the actual cost of those constructed may differ considerably from the value reported on the permit. The cities shown had a population of 50,000 or over in 1940.

No. 945.—BUILDING CONSTRUCTION IN ALL URBAN AREAS—PERMIT VALUATION OF BUILDINGS, BY TYPE OF BUILDING AND BY SOURCE OF FUNDS: 1942 AND 1943

[Data are compiled from estimates of construction costs made by prospective private builders when applying for permits to build and value of contracts awarded by Federal or State governments. Figures cover entire urban area of the United States which includes all incorporated places of 2,500 or more in 1940 and, by special rule, a small number of unincorporated civil divisions]

No. 946.—CONSTRUCTION IN THE UNITED STATES—ESTIMATED EXPENDITURES
FOR PUBLIC AND PRIVATE CONSTRUCTION: 1929 TO 1942

[These estimates represent the value of work performed during the year, as measured by expenditures for labor, material, and other items. They consequently differ from building permit and construction contract data which measure the value of work started. In addition, they have a generally broader coverage than permit and contract data. Figures include value and cost of installation of equipment which is an integral part of a structure, but not that of machinery, shipbuilding, or land costs. For annual estimates, 1915-28, approximately comparable with data below, see Statistical Abstract, 1942, p. 992.]

¹ Estimates of new private nonfarm residential construction prepared by the Bureau of Labor Statistics.
² Excludes nonresidential building by privately-owned public utilities and nonresidential farm construction.

³ Public industrial and commercial building included in data for private construction in 1929-33.

⁴ Includes cantonments, aeronautical facilities, navy yards and docks, Army and Navy hospitals, etc.

⁵ Beginning with 1941, based on data prepared by the Construction Research Section of the Statistics Division of the War Production Board.

⁶ Includes construction expenditures for such municipal enterprises as electric light and power plants, street railways and other transit systems, gas systems, ports, docks, harbors, ferries, airports, terminals, etc., and miscellaneous Federal construction.

No. 947.—CONSTRUCTION—SUMMARY, BY KIND OF CONTRACTOR, BY SIZE GROUPS: 1939

NOTE.—The 1939 Census of Construction covered all persons or establishments whose principal business in 1939 was utilizing construction materials and labor in construction work for others, or for themselves for speculative and investment purposes, on projects located within the limits of continental United States. It included erection and installation departments of manufacturers and merchandisers, when it was an important but not necessarily major portion of their business enterprise. Force-account work, ship and boat building, and installation and servicing of domestic appliances were not included. "Work performed" represents contract or order value of work done by the contractor's or builder's own forces. Work sublet to others was not included as work performed in the report of the builder or general contractor, but was reported as part of the business of the special trade contractor who received the subcontract. "Construction work" includes alterations and repairs, as well as new construction and additions. Data for establishments reporting less than \$500 of work performed in 1939 are not included. The canvass is known to have been incomplete in coverage of small contractors who operated from their homes. Most of this shortage occurred in metropolitan districts. It is believed that this undercoverage affects materially only number of establishments and number of proprietors.

No. 950.—CONSTRUCTION—SUMMARY FOR ESTABLISHMENTS REPORTING BUSINESS OF \$25,000 OR MORE, BY STATES: 1929 AND 1939

NOTE.—1929 and 1939 comparisons must be limited to establishments reporting business of \$25,000 or more as the 1929 census covered only that size group. That size group in 1939 accounted for 77 percent of total value of work performed by all contractors and builders regardless of size. Geographic distribution is based on office address of reporting establishment, not location of construction project.

No. 953.—BUILDING COSTS, SMALL-HOUSE, FOR REPRESENTATIVE CITIES—INDEXES: 1940 TO 1943

[Cost indexes are shown in this table for April of each year for the cities in the New York, Indianapolis, Des Moines, and Portland Districts; for May of each year for the cities in the Pittsburgh, Cincinnati, Little Rock, and Los Angeles Districts; and for June of each year for the cities in the Boston, Winston-Salem, Chicago, and Topeka Districts. In figuring costs, current prices and wage rates are obtained every 3 months from identical sources in each of the cities. These data are the basic material for the computation of the small-house building cost index given in table 952. The various units of material and labor are selected to conform with their contribution to the total cost of the completed dwelling. The standard 6-room frame house for which costs are given is not one completed and ready for occupancy, but only with all fundamental structural elements included. It does not include wallpaper, lighting fixtures, screens, etc., nor do costs reported include land, landscaping, or fees. These figures can be used to study the trend of costs within an individual community or for a comparison of trends in different cities]

No. 962.—DWELLING UNITS, URBAN AND RURAL, BY ESTIMATED TOTAL MONTHLY RENT AND ESTIMATED TOTAL VALUE: 1940

[For urban and rural-nonfarm units, monthly rent and value include land; for farm units, land is excluded. Monthly rental data include contract rent of tenant-occupied nonfarm units and estimated rent of other units. Monthly rent of owner-occupied rural-farm units is an estimate based on 1 percent of reported value. Value of owner-occupied units represents the owners' estimate of the value. For tenant-occupied and vacant units value was estimated as 100 times the monthly rent. Value or rent of units for which these data were not reported was estimated by assuming that the average value or rent of such units was the same as the value or rent of reporting units in the corresponding tenure and occupancy group of the urban and rural areas of each region.]

No. 966.—DWELLING UNITS, URBAN AND RURAL-NONFARM—MEDIAN CONTRACT OR ESTIMATED MONTHLY RENT AND MEDIAN VALUE, BY TENURE: 1940

NOTE.—The median may be defined as that item which is in the middle of a series arranged according to size. Thus, the median rent is the rent which divides the total number of dwelling units into two equal groups, one having rents higher than the median and one having rents lower than the median. Monthly rental data include contract rent of tenant-occupied units and estimated rent of owner-occupied and vacant units. Figures for "All dwelling units" include vacant units.

33. CLIMATE

CLIMATIC DATA OF SELECTED CITIES, BY MONTHS

Climatic data are gathered by the United States Weather Bureau at 5,500 stations, about 500 having automatic or hourly readings and the remaining 5,000 taking 1 observation a day. Observations have been taken at varying lengths of time at each station. The earliest year of record is 1871 at many stations, although some earlier, less detailed records began in the eighteenth century.

The following tables contain data from a carefully selected list of cities, chosen to give as general representation of climatic factors as is possible in the limited space available. The "Normals" are standard data selected by the Weather Bureau as representative of conditions in the local area. These data are adjusted to other long-record stations in the vicinity when the period of record is not the same as for the standard normals. In all other tables the averages represent the customary arithmetic average of the period of record. All temperature data are in degrees Fahrenheit, precipitation in inches and hundredths, and snow-fall in inches and tenths. Wind data are corrected to true velocities.

The number of degree days as used in these tables is the sum of the positive differences between 65° and the daily mean temperatures. Experience has shown that, for buildings requiring an inside temperature of approximately 70°, the amount of fuel or heat used per day is proportional to the number of days the average outside temperature falls below about 65°. The degree day is based on this principle.

Relative humidity data represent averages based on three to four daily observations.

¹ In the adjustment of this grant the road was treated as an entirety and without reference to the State line. Hence Alabama has had approved to her more and Mississippi less than they would appear to be entitled to in proportion to the length of road in the respective States.

² Includes 35,685 acres of the Chicago, Rock Island & Pacific Ry.; 109,757 acres of the Cedar Rapids & Missouri River R. R.; and 77,535 acres of the Dubuque & Sioux City R. R., situated in the old Des Moines River grant of Aug. 8, 1846, which should be deducted.

³ Declared to be 1 grant.

⁴ See Minnesota for original grants.

⁵ Leavenworth, Lawrence & Galveston includes 186,937 acres and Missouri, Kansas & Texas 270,971 acres in the Osage ceded reservation which are to be deducted under decision of the Supreme Court.

APPROXIMATE WEIGHT OF PETROLEUM AND PRODUCTS

In the United States petroleum and its products are measured by bulk, not weight. Whether handled in containers or without them the quantities are customarily reduced to the equivalent of barrels of 42 United States gallons (barrel thus equals 158.984 liters). In many foreign countries these commodities are measured by weight. The specific gravity of the different grades of crude petroleum and of the finished products varies materially. On the basis of approximate averages the Department of Commerce in converting foreign weight statistics to gallons or barrels of 42 gallons uses the factors shown in the following table:

BIBLIOGRAPHY OF SOURCES OF STATISTICAL DATA

GENERAL NOTE

This bibliography contains under the various subject headings references to the important primary sources of statistical information for the United States. Secondary sources have been referred to if the information contained therein is presented in a particularly convenient form or if primary sources are not readily available. One-time studies presenting compilations or estimates for several years or new types of data not available in regular series are included.

Much valuable information will also be found in State reports and in reports for particular commodities, industries, or similar segments of our economic and social structure. However, because of the large number of such references, they are not included here.

Section references on the right hand side of each page indicate that data from the report cited appear in the Statistical Abstract. Where current reports and a summary volume are both cited in the bibliography the section reference will often appear opposite the summary volume only. Reference to the sections indicated will enable the user to ascertain the type of information presented in the original source. However, it should not be assumed that all of the subjects from that source are summarized in the Abstract.

The location of the publisher of the report is given except for Federal governmental agencies located in Washington. Major inquiries, such as the Census of Population, are referred to by name rather than by specific volume references under the various topic headings. The final reports of the Sixteenth Census, which include those on the Censuses of Agriculture, Business, Manufactures, Mineral Industries, Population, and Housing, are listed at the end of the bibliography.
