

DENMARK IN FIGURES ● 2010

STATISTICS
DENMARK

Jan Plovsing, National Statistician

Statistics Denmark (middle of picture) is situated in the eastern part of Copenhagen, Østerbro

Statistics are about people. What is interesting about statistics are not the figures as such, but rather what they say about real life – our society and conditions of life as human beings.

Denmark in Figures 2010 gives you a short and simple picture of Denmark and the Danes. The publication addresses everyone, including those who have not detailed statistical knowledge.

Denmark in Figures tells the reader the story about Danish society and its development. A story testifying to the great changes experienced by society over the last 30 to 40 years.

Statistics Denmark is the national statistical bureau of Denmark. Our mission is to produce and disseminate trustworthy statistics on social and economic trends in society. Statistics Denmark was founded in 1850 when democracy was introduced in Denmark.

A small country with a long coastline

Denmark has no high mountains, great rivers or deep valleys. Instead, there are many small islands, a long coastline and a climate characterised by seasonal changes.

Denmark is a small country compared to its closest neighbours. Sweden and Germany is ten and eight times larger, respectively, than Denmark, which has an area of 43,098 km². On the other hand, Denmark has a coastline that is extraordinary given the size of the country. Denmark has a coastline of 7,314 km, corresponding to almost 1.5 metre coast per inhabitant.

One characteristic of Denmark's geography is the many islands, a total of 407. The largest islands are, in the order mentioned, Sealand, Vendsyssel-Thy, Funen, Lolland and Bornholm. Jutland (incl. Vendsyssel-Thy) makes up 69 per cent of the country's total area. Two-thirds of Denmark's area is farmland.

••• DID YOU KNOW THAT

In Denmark, it rains every second day. On average, a year has 171 days with a precipitation of more than 0.1 mm). In 2008, however, there were 194 days of precipitation. •••

In a year, the average temperature changes from 0 °C in January to 16 °C in August. Great variations compared with the average occur. The coldest day in more than 100 years was a January day in 1982 with a temperature of -31 °C. The hottest day was an August day in 1975 with a temperature of 36 °C.

THE KINGDOM OF DENMARK

Includes, besides Denmark, the self-governing areas of Greenland and the Faroe Islands. The ice free part of Greenland is almost 10 times larger than Denmark, while the Faroe Islands are 30 times smaller than Denmark.

In one hundred years the Danish population has doubled. The population grows when a child is born or an immigrant comes to the country. We become fewer when somebody dies or emigrates to another country.

POPULATION TRENDS

The Danish population has grown by 605,000 persons in the last 39 years. A little less than half of this increase – exactly 47.6 per cent – is due to more births than deaths. The other half is due to more immigrants than emigrants.

In the first half of the 1980s extraordinarily few children were born in Denmark. The expression the “small youth generations” refers to children born during this period. Until 1984 the low birth rate led to negative population growth. In 1985 the picture changed due to increased immigration. Since then the number of people has increased. In 1995 the population grew particularly much due to immigration from former Yugoslavia. In recent years the immigration has increased again due to work permits given to foreigners.

••• DID YOU KNOW THAT

The 5.51 million Danes make up only about 0.8 per thousand of the earth’s population of 6.8 billion people. In the early 1900s the Danes made up 1.5 per thousand so, in relative terms, the Danes have become fewer. •••

Immigration to Denmark is far from a new phenomenon. Today immigrants and their descendants constitute about 9.5 per cent of the population, corresponding to 526,000 persons.

Immigrants and their descendants from non-western countries constitute 6.4 per cent of the Danish population. In recent years emigration has also grown. This shows that we live in a globalised world.

Life's defining moments postponed

Danes live longer now, but we also get children later and marry later than we used to. Significant events are postponed until later in life.

Danes live on average more than five years longer today than in 1970. Today's average life expectancy is 80.7 years for women and 76.3 years for men. At the beginning of the 1900s, average life expectancy was almost 53 years for men and 56 years for women.

While the Danes live longer, they also get children at a later age. Today Danish women are on average 29 years old when they give birth to their first child. This is an increase of more than five years since 1970 when women were almost 24 years old when giving birth for the first time.

The women's fertility, i.e. how many children are born per woman, influences the growth of the population. Every woman of fertile age is to give birth to 2.1 children for the population to reproduce itself, provided that immigration and emigration counterbalance each other. From 1970 to 2000 the fertility was 1.5 to 1.8. Today it has increased to 1.9 which is still below 2.1.

• • • DID YOU KNOW THAT

Age is no barrier to love. In 2008, the oldest bride was 87 years while the groom was 91 years. The youngest bride and groom was both 17 years. • • •

Danish men and women are also older before they marry. In 1970, 88 per cent of all 30-year-old women were married, while this is true of only 44 per cent of the women at that age today. Men are on average 35 years old and women 32 years when they marry for the first time. Though Danes marry at a more mature age, this does not necessarily make the marriage more permanent. The record of divorces are 15,774 divorced couples in 2004. In 2008, there were 14,695 divorces.

AGE RELATED FERTILITY

For further information visit www.statbank.dk/fod3

TOTAL FERTILITY

The number of children that a woman gives birth to, on average, during the fertile age between 15 and 49 years.

AVERAGE LIFE EXPECTANCY

Average length of life based on mortality rates in a given period.

Danes are better educated than ever before. Today more than two-thirds of the adult population have attended vocational training. The age groups entering the labour market are better educated than those leaving it.

EDUCATION AND TRAINING PROVIDING PROFESSIONAL QUALIFICATIONS

Education and training programs that qualify for certain types of jobs, such as lawyer, teacher, educationist, economist, doctor or carpenter. It is education and training that follows after basic school or general upper secondary education.

Young Danes decide to an increasing degree to enrol for an education that qualifies them for a certain type of jobs. The population's general educational level has increased markedly in the recent 28 years. While basic school was the highest level of education passed by 41 per cent of the 25-64-year-olds in 1981, this was true for only 23 per cent in 2009.

In the recent period, a larger proportion of the population have graduated from higher education and training. While 15 per cent of the 25-64-year-olds had a higher education in 1981, this has increased to almost 31 per cent in 2009.

Medium-cycle higher education qualifies for jobs as, for example, school teachers, educationists or nurses. Long-cycle higher education qualifies for jobs as, for example, economists, doctors, vicars or lawyers. Vocational education and training qualifies for jobs as, for example, carpenters, cooks or clerks.

• • • DID YOU KNOW THAT

Danish children and youngsters spend many years in school. A child who starts nursery school today will on average spend 17 years studying before attaining the final exam certificate. • • •

In 2000, more Danish women than men were enrolled for long-cycle higher education for the first time. Women are also clearly overrepresented at medium-cycle higher education, while men still constitute the majority of those enrolled for vocational education and training. If this trend continues, women will in the long term be more highly educated than men.

Cinemas are popular again

From the 1980s and until the turn of the century, Danish cinemas saw a decreasing number of visitors. Since then, the number of visitors has increased.

The cultural habits of Danes are not constant. The interests of Danes are constantly changing within theatres, museums and films. While cinemas accounted for large ticket sales at the beginning of the 1980s, the entry of videos into Danes homes resulted in a decreasing number of visitors in cinemas. However, since the early 1990s, cinemas have seen a renaissance. Average ticket sales reached about 10 million annually, but this figure has increased to 12 million during recent years.

••• DID YOU KNOW THAT

Three Danish films have sold more than one million tickets. All three of them were action comedies about a gang called Olsen Banden. The foreign film seen by most Danes ever is *Titanic* with 1.4 million tickets sold. •••

Our interest in theatrical performance has changed its character since the early 1980s. The number of tickets sold for plays has decreased 37 per cent and interest in children's theatre has decreased by about a fifth. Opera have witnessed an increase in admission of 64 per cent. This increase has, however, not been sufficient to outweigh the decrease in audience for plays. State-subsidized theatres have on average 461,000 fewer annual visitors today than in the early 1980s.

During the same period, museums have experienced growth. However, interest in this field has also fluctuated. The National Museum includes fewer museums today than in the 1980s. Therefore the number of visitors has decreased while the number of visits to cultural historical museums has increased. The art museum Louisiana was the Danes' favourite museum in 2008 with 559,000 visitors. Subsequently, The National Gallery had 373,000 visitors in the same year.

Danes are good at taking their turn on the labour market. We have a high employment rate and a low unemployment rate in a European context. Part of the explanation is Danish women's high employment rate.

UNEMPLOYMENT RATE

UNEMPLOYMENT RATE
Unemployed as per cent of the total workforce.

LABOUR FORCE
Total of those employed and those unemployed between 16 and 66 years up to 2006 and between 16 and 64 years from 2006.

For further information visit www.statbank.dk/ru121d and [aulp01](#)

Unemployed rate	per cent	9.1	9.7	10.4	5.4	1.8

Note: The number of unemployed and employed do not sum up to the labour force population as the unemployment is the average unemployment throughout the year, and the labour force population is measured at a certain time of the year (end of November the year before).

For further information visit www.statbank.dk/aar and [aul01](#)

The Danish labour market is characterised by a high participation rate. An important reason for this is the fact that Danish women work more than in many other European countries. However, almost one-fifth of those at working age (16-64 years) are outside the labour force. A great number of these are persons receiving early retirement pensions or civil servants earned pensions (30 per cent), early retirement pay (19 per cent) and people enrolled for an education (18 per cent).

17 per cent of the men and 24 per cent of the women on the labour market are part-time employees. Part-time employment is most common in *arts, entertainment and recreation activities* where 34 per cent are part-time employees, followed by *other business services* with 29 per cent.

... DID YOU KNOW THAT

In the last ten years the average wages have increased by 50 per cent. During the same period, prices have increased by only 26 per cent resulting in a considerably higher purchasing power. ...

There have always been more men than women on the Danish labour market, but today the difference is much smaller than previously. Today men make up only slightly more than half the workforce.

In the early to middle 1990s, the unemployment rate was historically high in Denmark. Since then, the unemployment rate has decreased drastically and reached its lowest point in 2008. During 2009 the unemployment rate increased again.

Lots of room in dwellings

Danish craftsmen have been busy laying bricks and putting up the roof tree. Since 1970 the number of dwellings has increased by 57 per cent. During the same period, we have also been provided with more space in our homes.

There is more and more room for activities in Danish dwellings. Since 1980, the average dwelling area per person in occupied dwellings has increased from 42.6 m² to 51.4 m² in 2009. This is especially due to the fact that Danish dwellings have become larger. The average dwelling area has increased from 106.4 in 1980 to 110.9 m² in 2009. Another reason is that more people live alone. The average household size has decreased from 2.7 persons in 1970 to 2.1 persons in 2009.

Today, there are more than 1 million one-family houses and 1 million flats (apartment houses) in Denmark. Consequently, they are the preferred type of ownership. The number of dwellings in two- and multi-family houses has witnessed the greatest relative increase. Today, Denmark has about 383,000 of these types of dwellings, which is more than a trebling since 1970.

• • • DID YOU KNOW THAT

62 per cent of the Danish dwellings have district heating compared to 34 per cent in 1981. At that time, 53 per cent of the dwellings were oil-fired, which is true of only 14 per cent today. • • •

Considerably fewer young people live in a privately owned dwelling today than 28 years ago. In 1981, 51 per cent of the 20-29-year-olds lived in a privately owned dwelling, while the figure was 33 per cent in 2009. During the same period, more elderly live in their own dwelling.

TYPE OF DWELLING. 2009

- Owner-occupied dwellings, 64 per cent
- Social dwellings, 19 per cent
- Housing cooperative dwellings, 7 per cent
- Public dwellings, 2 per cent
- Other or not stated, 8 per cent

For further information visit www.statbank.dk/sam7 and [sam77](http://www.statbank.dk/sam77)

Total social service and health expenditure amounted to DKK 502 billion in 2008. This corresponds to 29 per cent of Danish GDP. Two thirds of the expenses were paid by the public sector, while the remaining expenses were paid by the employers (12 per cent) and the employees (22 per cent); the latter primarily through the special contribution to labour market funds.

The elderly receive the major part of social services through pensions, nursing homes, home help, etc. Sick Danes receive the second-largest part in the form of primarily hospitals and health insurance. The disabled and rehabilitated receive services in the form of, for example, early retirement pension and assistance in their homes. Families with children receive services in the form of, among other things, day-care institutions and child benefits. Almost all Danes will therefore receive social services sooner or later.

••• DID YOU KNOW THAT

Approximately 12,500 children and young persons under 18 years are placed outside their home, e.g. in foster care or residential institutions. Of these, nearly 60 per cent are more than 12 years old. •••

Unemployed adult Danes are entitled to transfer payments. Most transfer payments are permanent payments to adults who will not return to the labour market, such as pensioners and persons on early retirement. The remaining part is received by those who are temporarily outside the labour market, for example due to illness, maternity leave or unemployment.

One out of nine are hospitalized every year

A greater number of Danes is physically active, has stopped smoking and eat less fat. However, one out of nine Danes is still hospitalized every year due to pregnancy, diseases and accidents.

The Danish way of life with regard to, e.g. smoking, alcohol, diet and physical activity has changed in the last couple of decades. Our way of life is generally healthier. In 1980, about half of the population were smokers, but this proportion has now declined to a fourth. The amount of fat in the diet of the Danes has also been cut, and we drink slightly less alcoholic beverages than previously. However, our expenditure on medication has risen considerably, and about 40 per cent of the adult population use medicine regularly.

On average, one out of nine Danes is hospitalized every year. However, one third of the population aged 85 and above is admitted to a hospital at least once every year. While 5-14-year-olds are hospitalized on average three days, the average number of days in hospital beds for 85-year-olds and above is about 14.

There are many causes of hospitalization – some are more natural than others. 12 per cent of all hospital patients are admitted due to births.

• • • DID YOU KNOW THAT

Boys and girls who live with families that have received social benefits use hospital 19 and 18 per cent respectively more than the average child. • • •

Boys under the age of ten are more frequently hospitalized than girls of the same age. Especially boys are admitted to a hospital because of respiratory diseases compared to girls. However, this difference is equalled out when they are teenagers, and when they become old, especially women are hospitalized.

Today, Danes commit fewer crimes than ten years ago. Nevertheless, the police receive today a greater number of reports of criminal offences than was the case from the post-war years until the 1970s.

Today, four times more criminal offences are reported by Danes to the police, compared to 1950. In 2008, 477,000 offences were reported corresponding to almost one report for every 11 Danes of more than 14 years. There are several explanations for the increased number of offences. The welfare of society, empty dwellings during day-time, changed insurance terms and greater preparedness to report are among the reasons.

Since the 1990s, the number of criminal offences reported has, however, decreased, primarily because of fewer reported property offences. On the other hand, the number of violent crimes has increased.

• • • DID YOU KNOW THAT

Forgery is far less common than previously. In 2008, the number of forgeries reported was only a sixth of the level in 1980. This decrease is mainly caused by the use of credit cards rather than cheques. • • •

The number of criminal offences differs from region to region. There is a great difference between whether you live in a city or in the country. The metropolitan area and major cities such as Odense, Vejle and Århus have the largest number of offences per inhabitant, while small islands such as Læsø and Samsø have the lowest.

REPORTED CRIMINAL OFFENCES

Offences reported to the police or which have come to the knowledge of the policy in other ways. In 2008, 15 per cent of the reports lead to charges.

On Statistics Denmark's web site you can obtain a quick overview of Danish society as well as gain access to a vast number of different information regarding statistical data, e.g. publications free of charge.

ACCESS TO FREE DATABASE

By clicking here you gain access to www.statbank.dk which is described on the next page.

NAMES

If you want to know the most popular names in Denmark, this is the place to go.

DO YOU NEED DATA?

Statistics Denmark has a vast amount of commercial services for analysing economic and social conditions in Denmark.

INTRODUCTION TO STATISTICS DENMARK

This link leads you to www.dst.dk/presenting where you can download a brochure with information on Statistics Denmark. The brochure describes the statistical products, the dissemination, and the organization.

WWW.DST.DK/UK

Statistics Denmark's web site, www.dst.dk/uk, is continuously developed. Through the previous years, the English part of the web site has seen many changes and is being used by an increasing number of visitors. Therefore, new additions have been implemented to ease the use of the web site.

The screenshot shows the Statistics Denmark website interface. On the left is a navigation menu with categories like 'Statistics free of charge', 'Statbank Denmark', 'Names', 'Focus on', 'MF: SDOs', 'Other statistics free of charge', 'Statistics for sale', 'Data and analysis', and 'About Statistics Denmark'. The main content area displays a line graph titled 'Life table (2 years tables) by sex and time. Average life expectancy, 9 year. (Number)'. The graph shows life expectancy increasing from approximately 72 years in 1987 for men and 76 years for women to about 78 years for men and 81 years for women by 2006. Below the graph is a table with the following data:

Unit: Number	1987-1988	1992-1993	1997-1998	2002-2003	2006-2007	2007-2008
Men	71.84	72.58	73.68	74.89	75.95	76.28
Women	77.75	77.81	78.65	79.48	80.48	80.70

Below the table, there is a 'Purpose and history' section explaining that medical birth and death statistics go back to 1875 and are derived from the Central Population Register (CPR). A 'Description of Contents' section follows, detailing the information provided in the life tables, such as mother's age, marital status, and place of birth.

On the right side of the screenshot, there is a sidebar with several sections: 'Did you know that ...' (stating that 796 million Danish credit cards were made in 2007), 'Hot spots', 'About this page', and 'Contact Us' (with phone number +45 39 17 33 87).

STATISTICAL TRIVIA

A random selection of statistical trivia is presented to you in this box. The selection changes with every page you visit.

HOT SPOTS

Hot spots direct your attention to services offered by Statistics Denmark.

FOCUS ON

One of the latest additions to the English part of Statistics Denmark's web site is *Focus on*. This sub-site presents the most recent developments within a range of statistical areas. Data is presented as figures, graphs and tables, and you can also find a description of the statistical subjects that are being analysed. Visit www.dst.dk/focuson for more information.

Denmark in figures contains only a few selections of the statistics produced by Statistics Denmark. You can study the figures yourself on www.statbank.dk and learn many facts about a great variety of areas of Danish society.

BIILLIONS OF FREE DATA

StatBank Denmark is a gold-mine of data on Danish society. For example, you can see the increase in the Danish population, the number of trips made by Danes, the development of the Danish economy and much more information. Every day new figures are added. StatBank Denmark is free of charge. For more information visit www.statbank.dk

FLEXIBLE DATA EXTRACTS

If you extract less than thousand figures from Statbank Denmark, a table will be presented with the figures. Otherwise, you can download the figures in a range of formats, e.g. a spreadsheet.

MAPS

In StatBank Denmark a number of statistics can be displayed on maps. Click on the link to see examples that can be presented or changed at your preference.

CREATE YOUR OWN PROFILE

If you register on the web site you gain access to more options, including extraction of up to 100,000 figures in one table. Your selections are stored so you can easily retrieve them and monitor the development.

VISUAL PRESENTATION

When you extract figures you can have them presented as a wide variation of graphs and maps. In this way you can skip several operations for which you would normally have to use a spreadsheet.

EASY SEARCH

This tool helps you to find the subject of interest. Search on everything from births to inflation.

High level of income equality

Denmark is one of the countries in the world with the most equal income distribution. Of course incomes differ, but compared to other countries not much money needs to be redistributed to achieve the same income.

Danish family incomes differ according to the municipality of residence. In general, the metropolitan area and the large cities account for the greatest incomes. In Denmark as a whole, Danish families had an average disposable income of DKK 298,000 in 2007. The municipalities north of Copenhagen have the highest disposable incomes. Among these, Hørsholm Municipality has the highest with an average disposable income of DKK 513,000 a year. Copenhagen Municipality had the lowest average disposable income (DKK 227,000).

In an international context, Denmark is characterised as being one of the countries in the world with the most equally distributed incomes after taxes and transfer payments.

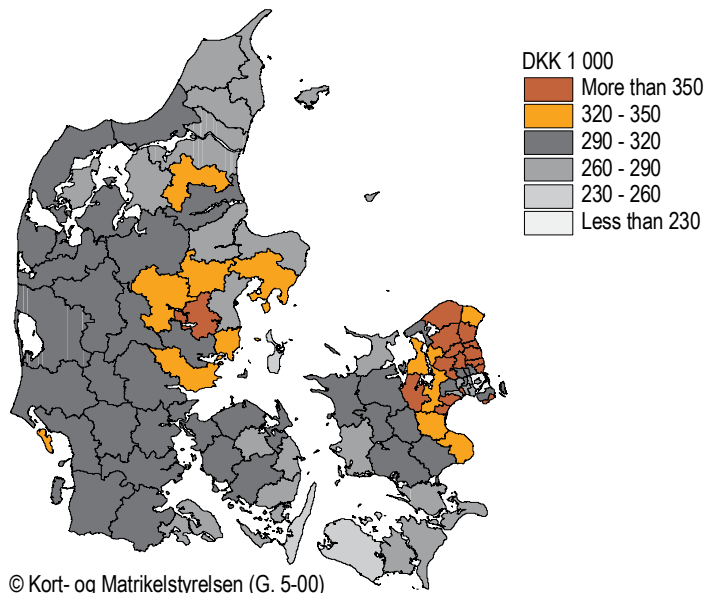

DISPOSABLE FAMILY INCOME

A family is defined as one or more persons living at the same address, be it singles or couples, including children younger than 25 living with their parents. Family income should not be mistaken for "household income", used in the consumer survey. Disposable income is the amount left for consumption and savings when direct taxes, interests etc. have been paid.

Couples with children had the highest average disposable family income of DKK 491,000 in 2007. Families with a high disposable income generally own more cars and more often live in owner-occupied dwellings than families with a lower disposable income.

Incomes also differ from men to women. In 2007, men's average disposable income was DKK 206,000, while that of women was DKK 163,000.

Increasing expenditure on dwellings

A majority of the income of Danes is spent on consumption. We spend a greater part on dwellings and relatively less on food, beverages and tobacco. Consumption habits change as society develops.

SHARES OF TOTAL CONSUMPTION

...
DID YOU KNOW THAT
 Danes have more kitchen hardware than previously. More than half of all Danish households own a tumble dryer, which is more than a doubling since 1990.
 ...

For further information visit www.statbank.dk/nat05

A decreasing part of the income of a Danish household is spent on food, beverages and tobacco, while an increasing part is spent on consumption of almost everything else. Since 1975, the consumption of food and beverages has decreased from constituting 26 per cent of total consumption to 14 per cent in 2008.

During the same period, our consumption on dwellings, including rent and heating, has increased from 21 to 27 per cent. One of the reasons is that wealth has grown and that each individual household has, consequently, more money for goods which were previously considered luxurious.

HOUSEHOLD CONSUMPTION EXPENDITURE. 2005-2007 (AVERAGE)

For further information visit www.statbank.dk/fu5 and www.statbank.dk/fu6

Consumption varies with the person(s) in the household. In general, singles spend a relatively larger part of their income on dwellings and heating than households with two adults. In general, two adults spend more on transport and other consumer goods, such as furniture and household services.

CONSUMPTION

Accounts of Danes' consumption are important in order to follow the economic development. Consumption etc. is accounted for in, for example, the household budget survey, national accounts and consumer expectations.

Normally, inflation is measured as the development in consumer prices, i.e. the cost of goods in shops. Since 1990, consumer prices have increased annually by 1 to 3 per cent, which is a small increase in a historical context.

From a manufacturing to a service society

The character of Danish society has changed in recent decades. In terms of employment, Denmark has turned from an agrarian and manufacturing society to primarily a service society.

Today, much fewer Danes than previously are employed in traditional industries such as agriculture, fishing, manufacturing and construction. In 1960, these industries accounted for 57 per cent of the employment, while this was true of 25 per cent in 2008. Today, more people work with private services instead, for example banking, insurance, ICT, cleaning and design. This stresses the fundamental change undergone by society in recent decades – from an agrarian and manufacturing society to a service society.

During the same period, the number of public employees has also increased considerably. While 11 per cent of all employees were found in the public sector in 1960, this figure had increased to 28 per cent in 2008. An important explanation is that when more women entered the labour market in the 1960s and 1970s, the public sector took over much of the work previously done by women at home, e.g. taking care of children.

• • • DID YOU KNOW THAT

A rather large share of newly founded enterprises does not survive many years. Only 42 per cent of enterprises founded in 2001 had survived by the end of 2007. • • •

Denmark has 305,000 active enterprises, which corresponds to almost one company per every ten Danes on the labour market. The Danish economy is characterised by a very large number of small enterprises and only a few large enterprises. 92 per cent of Danish enterprises have fewer than 10 employees, while 2 per cent of them have more than 50 employees. Enterprises with 50 employees or more employ 68 per cent of the labour force.

For further information visit www.statbank.dk/bdf, [bdf07](http://www.statbank.dk/bdf07), [oeko1](http://www.statbank.dk/oeko1), [ani5](http://www.statbank.dk/ani5), [komb](http://www.statbank.dk/komb), [komb07](http://www.statbank.dk/komb07), [afg](http://www.statbank.dk/afg) and [afg07](http://www.statbank.dk/afg07)

Danish agriculture is moving towards fewer and larger farms. Since 1970, the number of farms of less than 50 hectares has been reduced from 140,000 to 29,000, while the number of farms of more than 50 hectares has increased from 9,000 to 15,000.

There is a trend towards increased large-scale farming and closure of what may be called *family farms*. Improved and larger machinery, such as feeding systems and milking robots, has made larger farms possible, while it has been difficult to render small family farms profitable.

Agricultural products constitute a little more than one tenth of total exports with pork as the most important product.

• • • DID YOU KNOW THAT

Danish farms are the home of approximately 13 million pigs. The majority of the pigs are kept in Jutland, while the remaining number is distributed between Funen, Zealand and other islands. • • •

Certified organic farming is a relatively new phenomenon in Denmark. From 1990 to 2000, the number of organic farms increased from 523 to 3,466. Since then, the number of organic farms has decreased. However, the organic area has increased 51 per cent since 2000.

Falling employment in industrial sector

Danish industrial enterprises employ an ever-smaller part of the labour force. However, the manufacturing industry's contribution to the economy has remained more or less the same.

Danish industrial enterprises had a turnover of DKK 734 billion in 2008. This corresponds to DKK 133,000 per inhabitant in Denmark. The manufacturing of food products, beverages and tobacco constitutes the largest industrial group with one-fourth of total industrial turnover.

The share of jobs in the manufacturing industry has decreased steadily since the mid-1960s. In 1966, 28 per cent of the labour force was employed in the manufacturing industry, while this was true of 14 per cent in 2008. The decrease has been most dominant in the textile and leather industry and the iron and metal industry. During the same period, the industry's contribution to economic growth has remained more or less the same.

• • • DID YOU KNOW THAT

The ten largest enterprises of the manufacturing industry account for one-fourth of total turnover. This turnover is especially concentrated in large enterprises in, among others, the manufacturing of tobacco, dairy products and mineral oil. • • •

The manufacturing industry is, to a large extent, dependent on trade with foreign countries. In 2008, exports contributed to 59 per cent of industrial turnover. 83 per cent of the turnover in the manufacturing of chemicals came from exports. This makes it the industry with the largest export share of the turnover. Pork, pharmaceuticals, gas, oil and wind turbines are among the manufacturing industry's most produced and exported goods.

MANUFACTURING EMPLOYMENT IN GROUPS OF INDUSTRIES

• • • DID YOU KNOW THAT

Most cars weigh about one tonne. However, the heaviest cars weigh more than two tonnes, and there have become almost eight times as many during the last ten years. They now constitute 1 per cent of the total number of cars. • • •

The number of Danes injured in traffic accidents is continuously decreasing. Since 1971, when the number of traffic casualties set a sad record of 1,213 casualties, this number has decreased. In 2006, the number reached the lowest level yet. That year, 306 were killed in traffic accidents. Contributory factors were the introduction of speed limits and mandatory use of seatbelts in the early 1970s. Speed limits in city zones have also had a considerable impact. However, since 2006 the number of traffic accidents has increased.

Since 1961, a far greater number of cars drive on Danish roads. At that time, traffic was created by 354,000 passenger cars – today, there are more than 2 million cars. During the same period, considerably more Danes have bought a car. In North Zealand, 68 per cent of the families have at least one car. In Copenhagen City this only applies to 32 per cent.

Rudersdal Municipality, which is situated north of Copenhagen, holds the record with 1.3 cars per family. In general, families outside the metropolitan area have a car more often than elsewhere.

An average Dane travels 13,200 km a year. 84 per cent of the distance is covered by cars and vans, while trains and buses (in the order mentioned) are the second and third most ordinary type of transport. 3 per cent of all passenger transport is covered by bicycles or mopeds, while motor cycles account for 2 per cent.

Spain is a popular holiday destination

Especially German, Norwegian and Swedish tourists are keen on visiting Denmark. Rented holiday dwellings and camping is still popular with tourists. Our favourite destination abroad is Spain.

Danish towns, coasts with sandy beaches and rural quiet particularly appeal to many tourists, especially Germans, Norwegians and Swedes. The tourists, whether they are Danes or tourists from other countries, are especially keen on renting summer houses, but hotels and camping sites are also popular.

In a European context, Denmark is a lightweight when the number of nights spent in hotels is compared to the number of inhabitants in Denmark. In 2008, guests in hotels in Denmark accounted for nights spent twice per inhabitant, while Cyprus and Malta accounted for 18 and 19 nights spent per inhabitant. However, we range above some European countries, e.g. Belgium and Romania, when it is taken into account that their number of inhabitants is much higher.

• • • DID YOU KNOW THAT

Danes accounted for 58 per cent of all nights spent in Danish hotels in 2008. This mainly takes place in connection with, e.g. business trips, courses or weekend stays in an inn, etc. • • •

In 2008, the Danes went on holiday trips 16.6 million times, corresponding to almost three times per inhabitant. Most of the longer holidays are held outside Denmark. Spain, France and Italy are the three most popular holiday destinations and account for one-third of all holiday trips.

The most popular way to travel is by aircraft when Danes go on long holidays abroad. The car is the favourite means of transport for short holidays abroad and holidays in Denmark.

Service industries create new jobs

To an increasing degree, Danes make a living by using their heads rather than their hands. Many industries are characterised by highly specialised and well-educated employees. These industries create the so-called knowledge society.

KNOWLEDGE INTENSIVE SERVICE INDUSTRIES

Industries characterised by supplying services in specialised and knowledge-heavy specialist areas.

BUSINESS SERVICES

ICT consultancy services, lawyers, architects, cleaning companies, temporary employment agencies etc. supplying services primarily to other enterprises.

ICT INDUSTRY

Includes the ICT-industry, ICT wholesale trade, telecommunication and ICT consultancy services.

To an increasing extent, Danes with creative heads and a long education make a marked impact on the Danish economy. In recent years, so-called knowledge intensive industries have grown considerably, measured both as industrial turnover and as number of employees.

The ICT industry is one of the most important knowledge intensive industries, which experienced increased employment during the 1990s. From 1994 to 2001, employment increased by almost 50 per cent. At the beginning of the new millennium, the industry was in decline when the so-called ICT bubble burst. Since then, employment in the ICT industry has remained steady around 90,000 persons tending towards an increase.

In business services – which include, among others, advertising experts, lawyers, accountants and consultants – employment has more than doubled in the recent ten years. These activities also experienced a decline early in the new millennium, but since then employment has continued to grow.

••• DID YOU KNOW THAT

The ICT consultancy companies' greatest source of income is computer programming which constitute one third of the turnover. This is followed by computer systems and software consulting. •••

ICT consultancy companies have the largest turnover of all the businesses in the knowledge intensive service industries. However, temporary employment agencies etc. have the highest relative growth rate though they constitute a small part of the total turnover. From 2005 to 2008, the agencies turnover almost doubled.

New technology changes daily life

Danes have become fond of the new technology. Access to the Internet and mobile phones has become an integral part of almost everybody's everyday life. The SMS keys glow, and also picture messages (MMS) grow rapidly.

In record time the mobile phone has surpassed the fixed net phone with regard to subscriptions. In 2001, there was an almost equal distribution of mobile and fixed net subscribers. Since then, the number of fixed net subscribers has decreased, while the number of mobile subscribers has advanced rapidly.

Since 2005, there have been more mobile subscribers than people in Denmark. Mobile subscriptions in connection with work also count as subscriptions. However, 2 per cent of the families in Denmark have no mobile phone.

In 2008, Danes used the mobile phone more than the fixed net phone. Calls by mobile phone accounted for 9.7 billion minutes, while calls by fixed net phone accounted for 8.6 billion minutes.

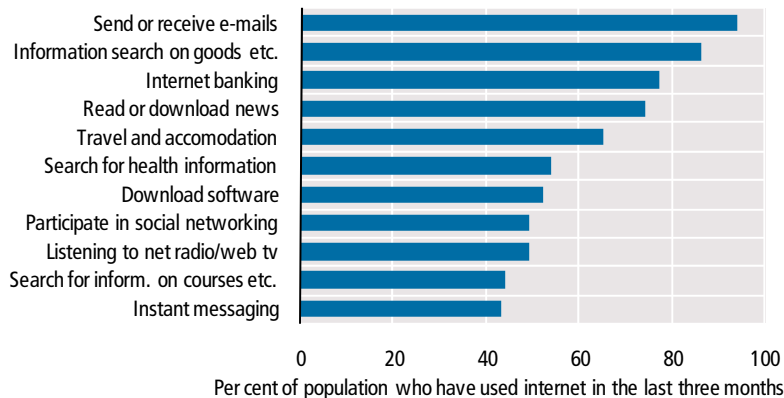

••• DID YOU KNOW THAT

The number of MMS messages develops explosively. While about 3 million MMS messages were sent during 2003, 68 million MMS messages were sent during 2008. •••

The Internet has become popular in Danes' everyday life. 86 per cent of all Danes have access at home. E-mail is the most common reason for using the Internet, followed by search for information on goods and internet banking.

Almost all companies have access to the Internet, and more than nine out of ten have their own website.

The state of the Danish public economy has improved considerably in the last decade. Except for a small deficit in 2003, Denmark has experienced a public finance surplus in the period 1999-2008.

In 2008, the surplus made up DKK 60 billion, corresponding to 3.4 per cent of GDP or DKK 10,900 per inhabitant. The public finance surplus has been caused by increasing tax income and fewer expenses on, among other things, interest.

The public finance surplus has been instrumental in making it possible for Denmark to pay instalments on the government debt in recent years. This caused the general government debt (net) to turn negative in 2007 and 2008. In other words, the Danish government owes less to others than what is owed by others to the government.

In 2008, the surplus on the net debt was DKK 113 billion, corresponding to DKK 20,600 per inhabitant. Ten years earlier, the deficit on the net debt was DKK 409 billion.

• • • DID YOU KNOW THAT

The tax burden in Denmark has been more or less stable since the mid-1990s. In total, taxes and duties account for about 48 per cent of GDP. • • •

The number of public employees increased rapidly during the 1970s. Since the early 1980s, a little less than a third of all employed were public employees. In 2008, total expenses on public administration and services were DKK 902 billion, corresponding to approximately DKK 164,000 per inhabitant.

Trade surplus for more than 20 years

Denmark is dependent on trade with foreign countries in order for our modern society to work. Exports and imports are increasingly important to economic growth.

Since 1987, Denmark has had a trade surplus. Earlier, there was a long period from the post-war years onwards when Denmark had a constant trade deficit. In 2008, Denmark had a trade surplus of DKK 29.4 billion, corresponding to almost DKK 5,300 per inhabitant.

A trade surplus is created when exports of goods exceed imports of goods. Three-fourths of Danish exports of goods consist of industrial products. Of these, wind turbines, pharmaceuticals and clothes are among the most dominant products. In addition, oil and agriculture – especially pork – each account for about one-tenth of exports. Some of Denmark's most important import products are cars, medicals and computers.

The most important trading partners are situated geographically close to Denmark. Germany and Sweden are the largest trading partners. The trade with these countries constitute about one third of the total Danish trade with foreign countries.

••• DID YOU KNOW THAT

China is Denmark's fourth largest importing country. From 2007 to 2008, imports from China increased by 10 per cent. •••

Since the mid-1990s, Denmark has exported more oil than it has imported. This is primarily due to increased oil extraction in the North Sea.

TRADE BALANCE

The value of exported goods less the value of imported goods. Not to be mistaken for the balance of payments, which also includes trade in services and payment of interest and wages, among other things.

Danes' prosperity grew significantly up to 2008. The balance of payments has also shown a surplus for quite some time which has resulted in decreasing foreign debt. However, in 2008 we saw the first signs of an economic decline.

The National Accounts are the accounts for the Danish household. They show how much we earn, how much we consume, how much we invest, and how much we trade with foreign countries. The growth in the gross domestic product (GDP) is a measure of the development of the entire economy and one of the most important National Accounts figures.

In 2008, the gross domestic product decreased by 0.9 per cent which is the first decrease since 1993. Apart from 2008, Denmark has experienced a high GDP growth since 1994 with the exception of the period from 2001 to 2003.

In 2008, Denmark's GDP was DKK 1,737 billion. Prosperity as GDP per inhabitant in chained values and constant prices has increased by almost 34 per cent since 1990.

GROSS DOMESTIC PRODUCT (GDP)

The value of a country's total production of goods and services in a given period, normally a year.

The balance of payments shows Denmark's economic transactions with other countries. For many years, Denmark struggled with considerable balance of payment deficits leading to fast growing foreign debts. However, with the exception of 1998, Denmark has experienced a balance of payment surplus since 1990, which has considerably reduced debts.

GOODS

In balance of payments, item goods differ from the trade balance in foreign trade due to different delimitations.
